Just the right size for assembling and repairing precision equipment such as electronic devices. Each wrench has a hardened, tempered tool-steel blade with a black finish and a knurled steel handle with a chrome finish. Head is angled 30°. Head thickness is 1/16″. Overall length is 4 1/16″.

8-Piece Wrench Sets

Inch—Includes one of each inch size listed. Packed in a vinyl pouch.

8041A19 ..... **Per Set** $36.61

Metric—Includes one of each metric size listed. Packed in a vinyl pouch.

7793A41 ..... **Per Set** $49.25

Tapered-Handle Wrenches

Handles are tapered with a pointed end for aligning bolt holes during assembly. Also called spud, structural, and construction wrenches, all are forged steel with a black finish.

(A) Open End—Wrenches are flat with a head that's angled 15° from the handle.

(B) Offset Open End—Head is offset 45°.

(C) Offset Box End—Box end is 12 point and offset 60°.

(D) Adjustable—Wrenches adjust to fit a range of sizes.

Double Open-End Wrenches

Each end has a different size opening, but both heads are angled 15°. Wrenches are made of forged steel.

***Inch*—**Wrenches have either a satin (dull) chrome finish with polished (mirror-like) heads or a black finish, unless noted.

***Metric*—**Have a satin (dull) chrome finish, unless noted.

Wrench Sets—Packed in a roll-up pouch.

Extra-Long Thin-Head Double Open-End Wrenches

Also known as tappet wrenches, these tools make it easy to turn low-height nuts in confined areas. Made of forged steel. Wrenches have a satin (dull) chrome finish, unless noted. Heads are angled 15°.

Wrench Sets—Packed in a roll-up pouch.

■ Heads are polished (mirror-like). ▲ Polished (mirror-like) chrome finish.

Angled Double Open-End Wrenches

Get a better angle on hard-to-reach fasteners—one head is angled 15° and the other is angled either 60° or 75°. Made of forged steel.

15° and 60° Angle Wrenches— The open ends are hex shaped to grip four sides of the fastener (unless noted). Wrenches have a satin (dull) chrome finish with polished (mirror-like) heads or a black finish.

15° and 75° Angle Wrenches— The open ends are rounded. Openings are the same size on both ends. Inch sizes have a polished (mirror-like) chrome finish; metric sizes have a satin (dull) chrome finish.

15° and 60°

15° and 75°

15° and 60° Angle Wrench Sets— Packed in a roll-up pouch.

9-Piece Inch Set— Includes sizes 13/64″ × 15/64″, 15/64″ × 13/64″, 7/32″ × 1/4″, 1/4″ × 7/32″, 9/32″ × 5/16″, 5/16″ × 9/32″, 11/32″ × 3/8″, and 3/8″ × 11/32″. First opening listed for each size is the 15° angle end. Also includes one 4 1/16″ bent-nose pliers.

5434A2♦ ..... **Per Set** $69.56

18-Piece Inch Sets— Include sizes 11/32″, 3/8″, 7/16″, 1/2″, 9/16″, 5/8″, 11/16″, 3/4″, 13/16″, 7/8″, 15/16″, 1″, 1 1/16″, 1 1/8″, 1 1/4″, 1 3/8″, 1 7/16″, and 1 1/2″. Openings are the same size on both ends.

Finish		Per Set

Flare-Nut Wrenches

12-Point Double Flare Nut

6-Point 30° Angle Flare Nut/ 15° Angle Open End

Compared to the rounded openings found on most open-end wrenches, flare-nut ends provide more surface contact to securely grip pipe and tube fittings without marring. Also known as line wrenches, these tools are often used in hydraulic line applications. Flare-nut ends are offset 15° and straight (not angled), except where noted. Made of forged steel in a satin (dull) chrome finish with polished (mirror-like) heads, unless noted. Use ***6-point*** wrenches for maximum surface contact on hex fasteners. The ***12-point*** wrenches provide less surface contact than 6-point wrenches, but are easier to position.

Wrench Sets—Packed in a roll-up pouch.

No. of Pieces	Sizes in Set	Finish		Per Set

Aluminum AN Open-End Wrenches

Also known as AN (Army-Navy) wrenches, these tools are designed for soft metal AN fittings often found on hydraulic lines in aircraft, marine, and performance racing applications. Made of aluminum for corrosion resistance and lighter weight than steel. The open end is V-shaped for a deep fit and has corner recesses so it won't mar or round corners on fittings. Head is angled 15°. Sizes are color coded for easy identification.

8-Piece Set—Includes one of each size listed below. Packed in a roll-up vinyl pouch.

91825A100 ..... **Per Set** $249.93

Ratcheting Combination Wrenches

One end has a 12-point box end ratchet that requires only a 5° handle swing. The other end is open and angled 15°. Made of forged steel with a polished (mirror-like) chrome finish.

Ratcheting combination wrenches are flat. Flip them over to reverse ratchet action. ***Reversible ratcheting combination wrenches*** have a lever on the box end that reverses direction. Ratchet is offset 15° for work in hard-to-reach areas. The offset also provides a more comfortable grip.

Premium Sets—The highest quality available. Made in the U.S. Packed in a vinyl roll-up pouch.

Economy Sets—Imported tools. *Inch* set is packed in a nylon roll-up pouch. *Metric* set is packed in a plastic tray.

Ratcheting Wrench Sets

7-Pc. Premium Inch Set—Includes sizes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4".

Stubby Ratcheting Combination Wrenches

Need to work in tight areas? The shorter length of a stubby wrench is the answer. Wrenches have a 12-point box end ratchet on one end that requires only a 5° handle swing to turn a fastener. The other end is open and angled 15°. Made of forged steel with a polished (mirror-like) chrome finish.

Ratcheting combination wrenches are flat. Flip them over to reverse ratchet action. ***Reversible ratcheting combination wrenches*** have a lever on the box end that reverses direction. Ratchet is offset 15° for work in hard-to-reach areas. The offset also provides a more comfortable grip.

Premium Sets—The highest quality available. Made in the U.S.

Economy Sets—Imported tools.

Combination Wrenches

Wrenches have a 15° angle open end and a 15° offset box end with 6 or 12 points. Made of forged steel. Use ***6-point*** wrenches for maximum surface contact on hex fasteners. ***12-point*** wrenches provide less surface contact than 6-point wrenches, but are easier to position.

Premium wrenches have extra machining for a superior fit and finish. The highest quality tools available. Made in the U.S., unless noted. ***Value*** wrenches are economical tools made in the U.S. ***Economy*** tools are imported.

Wrench Sets— Packed in a pouch, unless noted. Choose from four finishes: high-visibility colored, polished (mirror-like) chrome, satin (dull) chrome with polished heads, and black. *High-visibility colored wrench sets* have a bright, powder-coated finish so they are easy to spot—and difficult to leave behind at the job site. **To Order:** For high-visibility wrench sets, please specify color: red or yellow.

Individual Wrenches— Choose from polished (mirror-like) chrome, satin (dull) chrome, and black finishes.

★ Made in Canada.

Versa-Grip Ratcheting Combination Wrenches

A spline-shaped ratcheting box end gives you a good grip on 6-point, 6-point 50% rounded, and 12-point fastener heads as well as square, Torx, and spline-shaped fastener heads (as indicated). The ratcheting end requires only a 5° handle swing to turn the fastener. Flip wrenches over to reverse ratchet action. The open end has gripping recesses to reduce rounding. Open end is angled 15°. *Inch sizes* are made of forged steel with a polished (mirror-like) chrome finish. *Metric sizes* are made of alloy steel with a black chrome finish.

Wrench Sets—Come in a roll pouch.

9-Pc. Inch Set—Includes sizes 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, 9/16″, 5/8″, 11/16″, and 3/4″.
4950A22 ..... **Per Set** $163.60

10-Pc. Metric Set—Includes sizes 10, 11, 12, 13, 14, 15, 16, 17, 18, and 19 mm.
4950A91 ..... **Per Set** $151.39

Deep Offset Combination Wrenches

Go deep to reach recessed fasteners. Wrenches have a 12-point box end that is offset 30° to offer more clearance than most offset wrenches. The other end is an open end and angled 15°. Made of forged steel with a polished (mirror-like) chrome finish.

9-Pc. Set—Includes one of each size listed in a roll-up pouch.
91826A100 ..... **Per Set** $81.68

Comfort Grip Combination Wrench Sets

Do your hands a favor—choose wrenches with comfortable cushioned grips. All have a 15° angle open end and a 12-point, 15° offset box end. Made of steel with polished (mirror-like) chrome heads. Overall length ranges from 3 15/16″ to 13″. Packed in a vinyl roll-up pouch.

Inch Sets—Yellow Grip

10-Pc. Inch Set—Includes one each of sizes 7/16″, 1/2″, 9/16″, 5/8″, 11/16″, 3/4″, 13/16″, 7/8″, 15/16″, and 1″.
6114A22 ..... **Per Set** $196.04

15-Pc. Inch Set—Includes one each of sizes 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, 9/16″, 5/8″, 11/16″, 3/4″, 13/16″, 7/8″, 15/16″, 1″, 1 1/16″, and 1 1/8″.
6114A24 ..... **Per Set** $304.73

Metric Sets—Red Grip

10-Pc. Metric Set—Includes one each of sizes 10, 11, 12, 13, 14, 15, 16, 17, 18, and 19 mm.
6114A31 ..... **Per Set** $151.96

15-Pc. Metric Set—Includes one each of sizes 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 22, and 24 mm.
6114A32 ..... **Per Set** $239.00

Flex-Head Ratcheting Combination Wrenches

The 12-point box end ratchet is hinged—it pivots up to 180° and requires only a 5° handle swing to turn a fastener. The other end is an open end, angled 15°. Made of alloy steel with a polished (mirror-like) chrome finish.

Wrench Sets

7-Pc. Inch Set—Includes inch sizes listed below.
6445A21 ..... **Per Set** $142.99

7-Pc. Metric Set—Includes metric sizes listed below.
6445A22 ..... **Per Set** $139.35

High-Torque Grip-Plus Combination Wrenches

Gripping recesses on the open end reduce rounding and allow higher torque. The recesses also improve your grip on already worn and rounded fasteners. Open end is angled 15°. Box end is 12-point and offset 15°. Made of forged steel with a polished (mirror-like) chrome finish.

Wrench Sets—Packed in a canvas roll-up pouch.

7-Pc. Inch Set—Includes sizes 3/8″, 7/16″, 1/2″, 9/16″, 5/8″, 11/16″, and 3/4″.

Box Wrenches

Wrenches have a 12-point opening at each end. Made of forged steel with a polished (mirror-like) chrome finish, a satin (dull) chrome finish, or a black finish. Wrenches with a ***45° deep offset*** provide maximum handle clearance for reaching recessed fasteners. ***Half-moon*** wrenches are also known as obstruction wrenches. They have a curved handle that allows you to reach around obstacles and into machinery.

Heavy Duty Box Wrenches and Tubular Handles

Use these 12-point box wrenches by themselves, or slide a tubular handle (sold separately) over the end of the wrench for extra reach and/or leverage. Wrenches attach securely into the handles. All wrenches and handles are made of forged steel with a black finish.

Choose offset or straight wrenches. ***Offset wrenches*** have a 45° offset head that clears obstructions.

Striking Box Wrenches

Hit the large striking surface with a hammer when extreme force is necessary to loosen and set large fasteners. Wrenches are made of forged steel with a black finish. Use ***6-point wrenches*** for maximum surface contact on hex fasteners. ***12-point wrenches*** provide less surface contact than 6-point wrenches, but are easier to position.

Offset wrenches have a 45° offset head to clear obstructions. ***Straight*** wrenches allow you to apply maximum force directly through the handle to the fastener head while keeping the wrench head on the fastener.

Ratcheting Box Wrenches

You'll have twice the ratcheting choices—each end has a different size 12-point opening (unless noted). Wrenches require a 26° handle swing to turn a fastener. Made of nickel-chrome plated steel. Meet Fed. Spec. GGG-W-001405.

6-point wrenches offer maximum surface contact on hex fasteners. ***12-point*** wrenches provide less surface contact than 6-point wrenches, but are easier to position.

Flip Reverse—Turn wrenches over to reverse ratchet action.

Lever Reverse—Wrenches have a lever to reverse direction. Retaining rings prevent the wrench from slipping past the nut while you loosen or tighten it.

Wrench Sets—Packed in a vinyl pouch, unless noted.

● Has 6-point openings.

Tight-Access Ratcheting Box Wrenches

Single-End Ratcheting/ Standard End

Double-End Ratcheting (Straight Heads)

You don't need a lot of space to turn fasteners; wrenches have ratcheting heads that require only a 5° handle swing. Choose wrenches with a ratcheting head on one or both ends. Openings are 12 point. Made of forged steel with a polished (mirror-like) chrome finish.

Single-End Ratcheting/Standard End— Wrenches have a ratcheting box end and a standard box end. Flip them over to reverse ratchet action. Ratcheting box end has a straight head. Standard box end has a 15° offset head.

Double-End Ratcheting— Both heads are ratcheting. Flip wrenches over to reverse ratchet action, except 6443A14 wrenches have a lever to reverse direction.

Single-End Ratcheting/Standard End Wrench Sets

7-Pc. Inch Set— Includes sizes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4". Packed in a roll-up pouch.
5348A21 ..... **Per Set** $165.93

10-Pc. Metric Set— Includes sizes 10 mm through 19 mm. Packed in a roll-up pouch.
5348A51 ..... **Per Set** $250.29

Double-End Ratcheting Wrench Sets

4-Pc. Straight Inch Set— Includes sizes 5/16"×3/8", 7/16"×1/2", 9/16"×5/8", and 11/16"×3/4". Heads are straight. Packed in a plastic tray.
6443A11 ..... **Per Set** $63.03

4-Pc. Offset Inch Set— Includes sizes 5/16"×3/8", 7/16"×1/2", 9/16"×5/8", and 11/16"×3/4". Heads are 15° offset. Packed in a metal box.
6443A14 ..... **Per Set** $75.95

6-Pc. Metric Set— Includes sizes 8×9, 10×11, 12×13, 14×15, 16×18, and 17×19 mm. Heads are straight. Packed in a plastic tray.
6443A12 ..... **Per Set** $91.02

Insulated Ratcheting Box Wrenches

Wrenches have insulated handles that are tested to 1,000 volts. They comply with IEC 60900 and ASTM F1505-01. All have a straight head with a 12-point opening and require only a 6° handle swing to turn a fastener. Flip wrenches over to reverse the ratchet action. Made of forged steel.

Size	O'all Lg.		Each
3/8"	5 5/8"	**7449A61**	$39.81
7/16"	5 3/4"	**7449A62**	43.97
1/2"	6 1/8"	**7449A63**	44.97
9/16"	6 1/2"	**7449A64**	46.97
5/8"	6 15/16"	**7449A65**	48.97
3/4"	8 5/16"	**7449A67**	51.97

Square-Head Ratcheting Box Wrenches

The square heads are ideal for shut-off and service valves in air conditioning, refrigeration, and welding systems. Each wrench accommodates four sizes, two on each side. All have straight heads (unless noted) and require a 23° handle swing to turn a fastener. Push the lever to reverse the ratchet action. Made of nickel-chrome plated steel. Meet Fed. Spec. GGG-W-001405.

Size	O'all Lg.		Each
3/16" and 1/4" sq. × 1/2" and 9/16" hex	7"	**5473A11**	$21.50
3/16" and 1/4" sq. × 5/16" and 3/8" sq.	5 1/2"	**5473A12**	18.27
3/16" and 1/4" sq. × 5/16" and 3/8" sq.	5 3/16"	**5473A15** ♦	22.58

♦ Heads are offset 25°.

Offset Ratcheting Box Wrenches

Because the wrench heads are offset 25°, you'll have easier access to hard-to-reach fasteners. All require a 25° handle swing to turn a fastener. Just push the lever to reverse direction. Made of nickel-chrome plated steel. Meet Fed. Spec. GGG-W-001405. ***Single-end*** wrenches have a plastic handle.

Use ***6-point wrenches*** for maximum surface contact on hex fasteners. ***12-point wrenches*** provide less surface contact than 6-point wrenches, but are easier to position.

Wrench Sets— Openings are 6-point, unless noted.

Large-Size Heavy Duty Ratcheting Box Wrenches

Meet the demands of heavy equipment and industrial applications with extra-large wrenches. All have a straight head with a 12-point opening and require a 20° handle swing to turn a fastener. Just flip wrenches over to reverse ratchet action. Made of nickel-chrome plated steel with a vinyl grip. Meet Fed. Spec. GGG-W-001405.

Bolt-Through Reversible Ratcheting Wrenches

Square, Reversing Control on Top of Head

6 Point, Reversing Control at End of Handle

Round Bore with Keyway, Reversing Control on Side of Head

Open socket head allows bolts to pass through.

A straight, open socket head allows long bolts to pass through. Wrenches require a 23° handle swing to turn a fastener. Choose square, 6-point, or round bore with keyway wrenches. ***Round bore with keyway*** wrenches have a channel that allows the female bore to lock onto a male shaft.

Wrenches with ***reversing control on side of head*** have a lever on the side of the head to reverse direction. Wrenches with ***reversing control on top of head*** have a lever on the top of the head to reverse direction. Wrenches with ***reversing control at end of handle*** have a knurled knob at the end of the handle to reverse direction, making them perfect for work in tight areas.

Standard Duty—An economical alternative to the heavy duty wrenches, these are made of stamped steel side plates that are riveted together. Handles are plain (unless noted). Sockets are not replaceable.

Heavy Duty—Made of cast iron, wrenches can be used as hand-held ratcheting tools or can be mounted to machinery to serve as handles for turning, motion control, and adjustments. Sockets are replaceable.

To Order: Please specify size where necessary.

Ratcheting Torx Box Wrenches

Both ends ratchet and have a 6-point Torx opening. Wrenches require only a 5° handle swing to turn a fastener. Flip them over to reverse ratchet action. Heads are straight. Made of forged steel with a polished (mirror-like) chrome finish.

4-Pc. Set—Includes one of each size wrench listed below. Set is packed in a plastic tray.

6065A25 ..... **Per Set** $80.96

Size	O'all Lg.		Each	Size	O'all Lg.		Each
E6/E8	5 1/8"	6065A13	$21.05	E14/E18	7 1/2"	6065A17	$26.30

Quick-Grab Ratchet-Action Wrenches

You'll have the advantages of an open-end wrench, plus the convenience of ratchet action. The jaws snap open to slip onto fittings and fasteners; then, they close tightly for ratcheting. Wrenches require a 30° handle swing to turn a fastener. All are made of hardened steel with a black finish.

Also Available: Metric sizes. Please ask for 56215A5 and specify desired size: 7-19 mm or 21-24 mm.

Wrench Sets—Packed in a vinyl roll-up pouch.

4-Pc. Inch Set—Includes sizes 1/2", 9/16", 5/8", and 3/4".

5515A32 ..... **Per Set** $84.42

7-Pc. Inch Set—Includes sizes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4".

5515A44 ..... **Per Set** $150.81

5-Pc. Metric Set—Includes sizes 10, 11, 12, 13, and 14 mm.

56215A55 ..... **Per Set** $116.16

Wrench Holders

Screw Mount

Magnetic for 15 Wrenches

Harsh Environment

Screw Mount—Require four #11 screws for surface or wall mounting (screws not included). Wrenches are held in place by spring tabs. Slots are marked with the wrench size. Made of ABS plastic.

Magnetic—Have a magnetic back for mounting. Wrenches are held in place by tabs. Made of polystyrene.

Harsh Environment—Designed for offset combination wrenches, holders are made of polyethylene foam that stands up to petroleum products and solvents. Slots are marked with the wrench size. Base is a contrasting color to clearly identify missing tools. Holders lay flat.

Socket Wrenches

90° Offset

T-Handle

Stubborn fasteners are no match for these heavy duty socket wrenches. All are made of forged carbon steel with a black finish.

T-handle wrenches allow faster turning.

Use ***4-point*** wrenches on square fasteners. Use ***6-point*** wrenches on hex fasteners.

Self-Adjusting Ratcheting Socket Wrenches

No more searching around for the right socket—slide the lever, and the wrench jaw adjusts to fit square and hex fasteners. A second lever reverses ratchet action. Made of cast aluminum with steel jaws and a black finish. Handle is plastic.

Jaws Expanded

Size	O'all Lg.	Handle Swing		Each
5/16"-17/32" (8-14 mm)	8"	15°	53735A31	$23.81
9/16"-13/16" (14-21 mm)	10"	18°	53735A35	28.57

Bolt-Through Socket Wrenches

Each end has the same size socket for reaching recessed fasteners, but one end is open and offset 90° to fit over long bolts and studs. For extra leverage on the straight end, slip a bar through the offset end to create a T-handle. Wrenches are made of forged steel with a satin (dull) chrome finish.

Use ***6-point*** wrenches for maximum surface contact on hex fasteners. The ***12-point*** wrenches provide less surface contact than 6-point wrenches, but are easier to position.

Wrench fits over long bolts.

Flex-End Socket Wrenches

A 12-point socket end pivots 180° to give you easy access to hard-to-reach fasteners. Wrenches are made of forged steel.

Open/flex-end wrenches have a polished (mirror-like) chrome finish. Both ends are the same size. ***Double flex-end wrenches*** have a satin (dull) chrome finish with polished heads.

Master Inch and Metric Tool Sets

You'll get both inch and metric tools to handle a wide variety of jobs. Sockets and wrenches are forged alloy steel with a chrome finish.

75-Piece Set

Packed in a 16″ Ht.×11″ Wd.×3¼″ Dp. plastic case and includes the tools listed below:

- 43-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 32-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, and extension

57615A61 ..... **Per Set** $77.41

170-Piece Set

Packed in a 15″ Ht.×15″ Wd.×4″ Dp. plastic case. Set includes the tools listed below:

- 30-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, and extensions
- 27-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, and extensions
- 11-pc. ½″ sq. drive tools: sockets (inch and metric) and ratchet
- 56-pc. ¼″ sq. bits set: 55 bits and 1 holder
- 8 combination wrenches (inch and metric)
- 12 nutdrivers (inch and metric)
- 26 hex keys (inch and metric)

57615A62 ..... **Per Set** $141.45

Economy Inch and Metric Tool Sets

Tools are made of forged steel.

70-Piece Set

Set comes in a 9½″ Ht.×13″ Wd.×2½″ Dp. plastic case and includes tools listed below:

- 19-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, extension, and adapter
- 18-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 12 combination wrenches (inch and metric)
- 13-pc. screwdriver set: 10″ magnetic driver with 12 bits (slotted, Phillips, hex, and Torx)
- 8 hex keys (inch)

4090A23 ..... **Per Set** $73.91

147-Piece Set

Set is packed in a 19½″ Ht.×16″ Wd.×3½″ Dp. plastic case. Includes the tools listed below:

- 22-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 32-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, extensions, and adapter
- 12-pc. ½″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 12 combination wrenches (inch and metric)
- 2 pliers (long nose with cutter and wire cutting)
- 4 screwdrivers (slotted and Phillips)
- 45-pc. screwdriver set: 10″ magnetic driver with 38 bits (slotted, Phillips, hex, Torx, Posi-drive, and square recess), adapters, and holders
- 18-pc. hex key set: 16 hex keys (inch and metric) and 2 holders

6173A27 ..... **Per Set** $119.04

Maintenance Tool Sets

Take care of most maintenance jobs with these sets. Tools are steel.

9-Piece Set

Set comes in a vinyl roll-up pouch and includes the tools listed below:

- Screwdriver set:
  7½″ handle with bits
  Slotted: ¼″, 5/16″
  Phillips: #1, #2
  Nutdriver: ¼″, 5/16″
- 5 pliers (long nose with cutter, wire cutting, slip joint, tongue-and-groove, and vise grip)
- Fold-up hex key set (inch)
- Adjustable wrench
- Crimper/stripper

5818A66 ..... **Per Set** $131.15

33-Piece Set

Set comes in a nylon bag that has inside and outside tool pockets, strong web straps, and a zipper closure. Bag is 6″ Ht.×12″ Wd.×5½″ Dp. Set includes the tools listed below:

- 7 screwdrivers (slotted, slotted narrow blade, and Phillips)
- Screwdriver set:
  8″ driver with bits
  Slotted: 3/16″, 17/64″
  Phillips: #1, #2
  Torx: T15
- 14-pc. ¼″ sq. drive tools:
  6-pt. standard sockets (9), 3/16″ to ½″ in vinyl holder
  5½″ reversible ratchet
  6″ driver handle
  3″ and 6″ extensions
- 6 pliers (long nose with cutter (2), wire cutting (2), tongue-and-groove, and vise grip)
- Fold-up hex key set (inch)
- Adjustable wrench
- Ball peen hammer
- Electricians' knife
- Inch/metric tape rule

55915A65 ..... **Per Set** $298.74

9-Piece Insulated Electricians' Tool Set

Tools are alloy steel with insulated grips that are tested to 1,000 volts. All comply with IEC 60900 and ASTM F1505-07 standards. Set comes in a 13½″ Ht.×9½″ Wd.×2″ Dp. zippered vinyl case and includes the tools listed below:

- 5 screwdrivers (slotted and Phillips)
- 2 pliers (long nose w/cutter and wire cutting)
- 6 5/16″ wire stripper for 6-25 AWG
- 5½″ circuit tester with ⅛″ tip

5320A11 ..... **Per Set** $233.55

49-Piece Technicians' Tool Set

Get the tools you need for servicing electronic equipment, such as PCs and copy machines, in one easy-to-carry set.

The sockets and wrenches are made of forged alloy steel with a chrome finish. Set is furnished in a zippered nylon case with inside and outside tool pockets. Case is 12″ Ht.×14″ Wd.×3½″ Dp.

- 13-pc. ¼″ sq. drive tools:
  6-pt. standard sockets (9), 3/16″ to ½″ in vinyl holder
  5½″ reversible ratchet
  6″ spinner handle
  3″ and 6″ extensions
- 6-pc. screwdriver set:
  4″ handle with bits
  Slotted: 3/16″, ¼″, 5/16″
  Phillips: #1, #2
- 7-pc. mini screwdriver set:
  3″ handle with bits
  Slotted: 0.040″, 0.070″, 0.100″
  Phillips: #00, #0, #1
- 2 adjustable wrenches
- 2 pliers (long nose with cutter and wire cutting)
- Fold-up hex key set (inch)
- 6″ straight hemostat pliers
- 3-pc. soldering set
- DIP extractor
- Insertion/extraction tool
- Feeler gauge set (inch and metric)
- Alignment tool (double-end, slotted)
- Trimpot adjusting tool
- Key cap puller
- Spring combination tool
- 5″ to 19″ telescoping mirror and magnetic retriever tool
- #2 round needle file
- Standard duty precision knife
- 6″ stainless steel rule
- 5″ wire stripper/cutter
- Burnisher with 6 blades
- Penlight (AAA batteries included)

57935A45 ..... **Per Set** $384.85

Clip Rail Socket Holders

Clip Rail

Clip Rail Socket Tray

Each holder consists of a nickel-plated steel rail with nickel-plated spring steel clips. Simply press your sockets onto the clips for a secure hold. Clips can be arranged in any position along the rail.

For Sq. Drive	9″ Rails No. of Clips		Each	17″ Rails No. of Clips		Each
1/4″	9	5605A51	$2.66	16	5605A21	$3.54
3/8″	9	5605A52	2.71	16	5605A11	3.62
1/2″	9	5605A53	2.85	16	5605A12	3.80
3/4″	4	5605A54	2.89	10	5605A22	3.85

Clip Rail Socket Tray—Includes four 17″ long rails plus 60 socket clips (20 clips each for 1/4″, 3/8″, and 1/2″ sq. drive sockets). The tray is 19 1/2″ long including the handle and can hold up to 80 sockets.

5836A54 ..... **Each** $26.16

Extra Socket Clips—20 clips per package. **To Order:** Please specify 1/4″, 3/8″, 1/2″, or 3/4″ square drive.

5605A75 ..... **Per Pkg.** $3.10

Flexible Socket Holders

Bend these holders any way you like—they'll hold both standard and deep sockets tightly. Made of polyurethane, holders are nonmarring and resistant to chemicals and solvents. You can cut them to fit any space. Made to accommodate 14 sockets. **To Order:** Please specify blue or red.

For Sq. Drive	For Socket Sizes Inch	Metric	Overall Size, Lg.×Wd.×Ht.			Each
1/4″	1/8″ to 5/8″	4 to 15 mm	11 1/2″	× 7/8″	× 5/8″	5513A21 $3.22

Magnetic Drawer Organizer Set for Sockets

Keep sockets neat and organized in the drawers of your tool chest. Set includes high-impact polypropylene mat with embedded magnets and 84 pegs (28 pegs each for 1/4″, 3/8″, and 1/2″ sq. drive sockets). Pegs can be used in any combination to customize your workspace. Mat is 18 3/8″ Lg.×10 1/4″ Wd.

8634A25 ..... **Per Set** $61.85

Magnetic Socket Holders

Running out of bench-top storage space? The magnetic base on these holders sticks to almost any metal surface for convenient storage. Holders accommodate both standard and deep sockets in inch and metric sizes.

Style A—Has a two-tier design. Base is rubber.

Style B—Sockets lay flat for a low profile. Made of ABS plastic. 55305A84 also holds impact sockets.

Style C—Magnetic pegs securely hold any size socket. Base is polypropylene.

To Order: For Styles A and B, please specify color from those listed.

1/2″ Square Drive Insulated Ratchet Wrench—Tool is 10″ long and requires only a 5° handle swing to turn a fastener. Made of alloy steel.

5556A22 ..... **Each** $182.77

Square Drive Ball-Point Hex-Bit Sockets

A ball point on the bits allows up to a 20° angled entry—great for getting at hard-to-reach fasteners. Sockets are heat-treated alloy steel with chrome finish. Bits are black or gray. Not for use with power or impact tools.

Also Available: Replacement bits for inch sizes, except where noted. Please ask for 54905A32 and specify hex size and square drive size.

1/4″ and 3/8″ Square Drive Bit Socket Assortment

You'll get 32 sockets made of heat-treated alloy steel with a chrome finish. Bits are black. Not for use with impact tools. Furnished in a plastic case.

- **3/8″ sq. drive hex-bit sockets:** 1/8″, 9/64″, 5/32″, 3/16″, 7/32″, 1/4″, 5/16″, 3/8″
- **3/8″ sq. drive metric hex-bit sockets:** 4, 5, 6, 7, 8, 9, 10 mm
- **1/4″ sq. drive Torx-bit sockets:** T10, T15, T20, T25, T27, T30
- **3/8″ sq. drive Torx-bit sockets:** T40, T45, T47, T50
- **3/8″ sq. drive screwdriver-bit sockets:** Slotted: 3/16″, 1/4″, 5/16″, 3/8″, Phillips: #1, #2, #3

5534A22 ..... **Per Set** $59.79

Square Drive Torx-Bit Sockets

Sockets are made of heat-treated alloy steel with a chrome finish. Bits are black or gray. Not for use with power or impact tools.

Also Available: Replacement bits, except where noted. Please ask for 5474A1 for 1/4″ square drive, 6939A3 for 3/8″ square drive, or 5477A5 for 1/2″ square drive, and specify Torx size and length (short or long) where applicable.

Socket Sets

6-Pc. 1/4″ Square Drive Short Set—Includes T10, T15, T20, T25, T27, and T30 sockets and a clip rail. Packed in a vinyl pouch.
5474A51 ..... **Per Set** $45.21

8-Pc. 3/8″ Square Drive Short Set—Includes T15, T20, T25, T27, T30, T40, T45, and T50 sockets and a clip rail. Packed in a vinyl pouch.
6939A75 ..... **Per Set** $56.87

10-Pc. 1/4″ and 3/8″ Square Drive Short Set—Includes 1/4″ drive sizes T8, T10, T15, T20, and T25 sockets plus 3/8″ drive sizes T27, T30, T40, T45, and T50 sockets. Furnished with a clip rail. Packed in a vinyl pouch.
5527A11 ..... **Per Set** $72.25

6-Pc. 1/2″ Square Drive Short Set—Includes T30, T40, T45, T50, T55, and T60 sockets and a clip rail.
5477A75 ..... **Per Set** $62.70

♠ Replacement bits are not available.

3/8″ Square Drive Tamper-Resistant Hex-Bit Socket Set

Set includes nine sockets for tamper-resistant (pin-in-head) hex screws. Sockets are heat-treated alloy steel with a chrome finish. Bits are gray. Set has a clip rail with a 1 1/2″ long socket in each of the following sizes: 5/64″, 3/32″, 7/64″, 1/8″, 9/64″, 5/32″, 3/16″, 7/32″, and 1/4″. Not for use with power or impact tools.

Also Available: Repl. sockets and bits. For sockets, please ask for 5536A1 and specify size. For bits, please ask for 5536A2 and specify size.

5536A33 ..... **Per Set** $70.90

Square Drive Tamper-Resistant Torx-Bit Sockets

All of these sockets are for use with tamper-resistant (pin-in-head) Torx fasteners. Not for use with power or impact tools. ***24-piece set*** can also be used with standard Torx fasteners.

13-Piece Set

Sockets are heat-treated alloy steel with a chrome finish. Bits are gray. Includes 1/4″ square drive sizes T7, T8, T10, T15, T20, T25, T27, and T30, 3/8″ square drive sizes T40, T45, T50, and T55, and 1/2″ square drive size T60. Furnished with a clip rail.

54055A75 ..... **Per Set** $73.80

24-Piece Set

Set has 22 interchangeable Torx bits made of heat-treated alloy steel. All have a 3/8″ hex shank to fit 3/8″ and 1/2″ square drive bit holders (included). Holders are alloy steel with a chrome finish and have a ball detent to firmly hold bits in place. You'll get one of each size in 13/16″ and 3″ lengths: T10, T15, T20, T25, T27, T30, T40, T45, T50, T55, and T60. Furnished in a 7 1/2″ Ht. × 9″ Wd. × 1 3/4″ Dp. plastic case.

Also Available: Replacement 3″ long tamper-resistant Torx bits. Please ask for 55535A4 and specify size.

55535A42 ..... **Per Set** $75.66

Individual Sockets

Sockets are heat-treated alloy steel with a chrome finish. Bits are gray.

Square Drive Torx-Plus Bit Sockets

Use Torx-Plus bit sockets for increased surface contact and 25% more torque on Torx-Plus fasteners. Sockets are heat-treated alloy steel with a chrome finish. Bits are gray. Not for use with power or impact tools.

Note: These are compatible only with Torx-Plus fasteners.

8-Piece Set

Includes 1/4″ square drive sockets in sizes IP9, IP10, IP15, and IP20; 3/8″ square drive sockets in sizes IP25, IP27, IP30, and IP40 on a clip rail; a hex key; and a vinyl pouch.

8637A41 ..... **Per Set** $55.55

Individual Sockets

1/4″ Square Drive Sockets— Overall length is 1 1/2″. Available in sizes IP6, IP7, IP8, IP9, IP10, IP15, IP20, IP25, IP27, IP30, and IP40.

To Order: Please specify size.

8637A52 ..... **Each** $6.81

3/8″ Square Drive Sockets— Overall length is 1 21/32″. Available in sizes IP9, IP10, IP15, IP20, IP25, IP27, IP30, and IP40.

To Order: Please specify size.

8637A62 ..... **Each** $8.18

About Selecting a Square Drive Size

Select the square drive size of your socket based on the size of your fastener and your space and torque needs. Some fasteners are compatible with multiple drive sizes. For work in confined areas, select the smaller drive size. If you are applying a lot of torque and space is not an issue, select the larger drive size.

Fastener Size	Fits Square Drive	Pages
1/8″ to 5/8″ and 4 to 15 mm	1/4″	2786–2788
1/4″ to 1″ and 5.5 to 26 mm	3/8″	2789-2793
3/8″ to 1 1/2″ and 10 to 36 mm	1/2″	2792-2796
3/4″ to 2 3/8″ and 19 to 55 mm	3/4″	2796-2797
1 1/16″ to 3 1/2″	1″	2797

1/4″ Square Drive Socket Sets

58455A14

58455A27

Sockets are heat-treated alloy steel with a chrome finish. Not for use with power or impact tools. ***6-point*** and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position. ***Premium sets*** are the finest tools available. They have gone through additional machining, grinding, and/or polishing for superior fit and finish. Made in the U.S. ***Value sets*** are high-quality tools offered at an economical price. Made in the U.S. ***Economy set*** is imported.

1/4" Square Drive Sockets

All of these premium-quality sockets are made of heat-treated alloy steel with a chrome finish. Not for use with power or impact tools.

4-point and ***8-point sockets*** are for use with square fasteners. The 4-point sockets prevent rounding, but the 8-point sockets are easier to position. ***6-point*** and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position.

Also Available: 12-point deep metric sockets. Please ask for 7195A2 and specify size (5-14 mm).

1/4″ Square Drive Wrenches & Accessories

For information about drive size, see page 2786.

1/4″ Square Drive Ratchet Wrenches

Wrenches are premium quality and made of alloy steel. All have a reversible ratchet. ***High-torque wrenches*** have a pear-shaped head that tends to provide more torque, but requires a 6° to 15° handle swing. ***Tight-clearance wrenches*** have a round head that requires a 0° to 10° handle swing; they're great for use in confined spaces.

Push-Button Release— Push the button to release the socket.

Sealed Head— A gasket seals in permanent lubrication and keeps out contaminants such as dust, dirt, and moisture.

Twist-Action Speed Drive— Use as a reversing ratchet or rotate the handle to turn the square drive. Handle has a cushion grip.

Palm Control— Hold down the ring on the top of the head while turning to prevent accidental reversal.

Flex Head— The head pivots 90° up and down.

Fine Control Silent— Also known as tight-spot 0° ratchets. All have a series of rollers (instead of gear teeth) that engage with the slightest handle movement. A through hole allows use with hex keys.

For information about drive size, see page 2786.

3/8″ Square Drive Socket Sets

Sockets are made of heat-treated alloy steel with a chrome finish. Not for use with power or impact tools. 53305A21 has both 1/4″ and 3/8″ square drive sockets.

6-point and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position. ***8-point sockets*** are for use with square fasteners.

Premium sets are the finest tools available. All have gone through additional machining, grinding, and/or polishing for a superior fit and finish. Made in the U.S. ***Value sets*** are high-quality tools offered at an economical price. Made in the U.S. ***Economy sets*** are imported.

3/8" Square Drive Sockets

Sockets are premium quality and made of heat-treated alloy steel. Not for use with power or impact tools. ***4-point*** and ***8-point sockets*** are for use with square fasteners. The 4-point sockets prevent rounding, but the 8-point sockets are easier to position. ***5-point sockets*** are for use with water and gas valves. ***6-point*** and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position. ***Spark plug sockets*** have a rubber insert that grips the plug's insulator to prevent damage.

Also Available: 12-pt. flex-joint inch sockets with black finish. Please ask for 5484A83 and specify size: 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", or 3/4".

Also Available: 12-pt. flex-joint metric sockets with chrome finish. Please ask for 5849A112 and specify size: 9-19 mm.

Adaptable Inch/Metric Socket—Chrome Finish

Socket has 54 pins that work with inch and metric hex fasteners. No adjustment needed—just place the socket over your fastener and turn.

For Fastener Sizes	Max. Dp.	O'all Lg.		Each
1/4"-3/4", 7mm-19mm	3/8"	2"	5398A66	$15.22

For information about drive size, see page 2786.

3/8″ Square Drive Tight-Access Offset Sockets

Also known as crowfoot wrenches, these sockets provide access to hard-to-reach fasteners and fittings. Made of heat-treated alloy steel with a chrome finish. ***6-point*** and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position.

Open-end sockets have the thinnest head. ***Flare-nut sockets*** are for flared tube fittings as well as for fuel and hydraulic lines. 12-pt. flare-nut style has a side-locking hole for a more secure attachment. ***Ratcheting box-end sockets*** have a lever to push to reverse direction.

Also Available: 1/4″ square drive open-end inch sizes. Please ask for 1213A101 and specify size: 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, or 9/16″.

Sets

10-Pc. Inch Open-End Set—Includes 3/8″, 7/16″, 1/2″, 9/16″, 5/8″, 11/16″, 3/4″, 13/16″, 7/8″, 1″ sizes on a metal clip rail.

5844A25 ..... **Per Set** $96.10

7-Pc. Inch 6-Pt. Flare-Nut Set—Includes 3/8″, 7/16″, 1/2″, 9/16″, 5/8″, 11/16″, 3/4″ sizes and a plastic tray.

7306A53 ..... **Per Set** $160.98

55805A45 ..... **Per Set** $134.23

3/8″ and 1/2″ Square Drive Ratchet Wrenches

Wrenches are premium quality and have a reversible ratchet. Made of alloy steel, except palm style, which is rubber-coated polycarbonate. ***High-torque wrenches*** have a pear-shaped head that tends to provide more torque but requires a 5° to 15° handle swing. ***Tight-clearance wrenches*** have a round head that requires a 0° to 8° handle swing (unless noted); they're great for use in confined spaces.

Push-Button Release— Push the button to release the socket.

Sealed Head— A gasket seals in permanent lubrication and keeps out contaminants such as dust, dirt, and moisture.

Twist-Action Speed Drive— Use as a reversing ratchet or rotate the handle to turn the square drive. Handle has a cushion grip.

Flex Head— Head pivots 90° up and down.

Tapered Handle— Also known as a construction wrench or spud handle. Handle tapers to a pointed end for aligning bolt holes.

Fine Control Silent— Also known as a tight-spot 0° ratchet. Wrench has a series of rollers (instead of gear teeth) that engage with the slightest handle movement. A through hole allows use with hex keys.

Offset Handle with Flex Head— The handle is offset 23° to clear obstructions.

Raised Ratchet Reverse— Also known as a lineman's ratchet. The raised reverse allows easy turning when you're wearing gloves.

Push-Through Reversing Square Drive— To reverse, push the square drive through the ratchet head so you can use it on the other side. Wrenches have a comfortable cushion-grip handle.

Miniature— Head diameter is 27/32″ for use in confined areas.

For information about drive size, see page 2786.

1/2″ Square Drive Sockets

Sockets are premium quality and made of heat-treated alloy steel. Not for use with power or impact tools. ***Extra-deep sockets*** are for use on long-stem bolts used in repairing clamps, joint fittings, and saddles. The socket barrel is carbon steel. ***Spark plug sockets*** have a rubber insert that grips the plug's insulator to prevent damage.

5-point socket is for use with water and gas valves. ***6-point*** and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position. ***8-point sockets*** are for use with square fasteners.

Also Available: 12-pt. flex-joint inch sockets. For chrome finish, please ask for 5545A34 and specify size: 1/2″, 9/16″, 5/8″, 11/16″, or 3/4″. For black finish, please ask for 5491A11 and specify size: 1/2″, 9/16″, 5/8″, 11/16″, or 3/4″.

1/2″ & 3/4″ Square Drive Sockets

For information about drive size, see page 2786.

1/2″ Square Drive Tight-Access Offset Sockets

Open End

12-Pt. Flare Nut

Also known as crowfoot wrenches, these sockets provide access to hard-to-reach fasteners and fittings. Made of heat-treated alloy steel with a chrome finish. ***Open-end sockets*** have the thinnest head. Head thick. ranges from 11/32″ to 39/64″. ***Flare-nut sockets*** are for flared tube fittings as well as for fuel and hydraulic lines. Sockets have a side-locking hole for a more secure attachment. Head thick. ranges from 7/8″ to 1 1/16″.

Sets

7-Pc. Open-End Set — Includes 15/16″, 1″, 1 1/16″, 1 1/8″, 1 1/4″, 1 7/16″, 1 1/2″ sizes on a metal clip rail.
5831A41 ..... **Per Set** $104.80

8-Pc. 12-Pt. Flare-Nut Set — Includes 1 1/8″, 1 1/4″, 1 5/16″, 1 3/8″, 1 1/2″, 1 5/8″, 1 3/4″, 2″ sizes on a metal clip rail.

3/4″ Square Drive Sockets

6 Point

12 Point

Standard

Deep

Sockets are premium quality and made of heat-treated alloy steel with a chrome finish. Not for use with power or impact tools. ***6-point*** and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position.

About Impact Sockets and Power Sockets

4 Point | 6 Point | 8 Point | 12 Point | Hex Bit

4-point and ***8-point sockets*** are for use with square fasteners. The 4-point sockets prevent rounding, but the 8-point sockets are easier to position.

6-point and ***12-point sockets*** are for use with hex fasteners. The 6-point sockets prevent rounding and work well on fasteners made of soft metals. The 12-point sockets are easier to position.

Hex-bit sockets are for hex socket head fasteners.

Magnetic sockets hold fasteners in the socket. They are ideal for self-tapping screws.

Thin-wall sockets have thinner walls (smaller outside diameter) for tight-clearance applications.

Impact Sockets (pages 2798-2804)— Sockets are heat treated to a lesser hardness than power sockets, giving them the ability to withstand high torque and the force of impact tools. Impact sockets can be used in hand-driven and power applications, but they will wear sooner than power sockets.

Note: For ¾″ square drive and larger impact sockets, use a retaining ring to secure the socket (or accessory) to your power tool or impact wrench that has a hole- or a ring-and-hole style retainer. Or, use a tool with a pin-style retainer (no retaining ring needed).

Thin-Wall Power Sockets (pages 2804-2805)— For use with power-driven tools such as ratchets, wrenches, and multiple-spindle machines. Power sockets are heat treated to a greater hardness than impact sockets for increased durability. This hardness also allows the sockets to be thinner, making them useful in tight-clearance areas. Power sockets are not for use with impact tools.

Square Drive Impact Sockets & Drivers

¼″ Square Drive Impact Sockets and Accessories

6 Point

Standard Socket

Deep Socket

Made of heat-treated alloy steel, these premium-quality sockets and accessories have a black finish, unless noted.

Also Available: 6-point impact sockets in metric sizes. For deep sockets, please ask for 53115A42 and specify size: 6, 7, 8, 10, 11, 12, or 13mm. For flex-joint sockets, please ask for 53115A43 and specify size: 7, 8, 10, 12, or 13mm.

⅜″ and ½″ Square Drive Manual Impact Drivers

6-Piece Set

Use the drivers with impact sockets to free frozen bolts and screws. You can also use them with insert bits to turn frozen screws. Strike the shank end with a hammer to loosen or tighten fasteners. Drivers operate in forward and reverse. Made of heat-treated alloy steel. See pages 2818-2825 for a complete selection of ¼″ and 5/16″ hex-shank insert bits.

Manual Impact Driver Sets

6-Piece Sets— Include impact driver, 5/16″ and ⅜″ slotted bits, #2 and #3 Phillips bits, 5/16″ hex bit adapter, and a vinyl pouch.

With ⅜″ Sq. Drive Impact Driver ..... **5610A2** **Per Set** $32.65
With ½″ Sq. Drive Impact Driver ..... **5610A33** **Per Set** $38.96

9-Piece Set— Includes impact driver; 5/16″ slotted bit; #2 Phillips bit; 3, 4, 5, 6, 8 mm hex bits; 5/16″ hex bit adapter; and a vinyl pouch.

With ⅜″ Sq. Drive Impact Driver ..... **6967A12** **Per Set** $36.16

■ Male end requires a retaining ring. Please ask for 5549A169.

		Per Set
Set of 4 Standard Extensions (2″, 3″, 5″, 10″)	5549A209	$44.48
Set of 3 Locking Extensions (3″, 5″, 10″)	5549A311	90.33

1/2″ Square Drive Torque Limiting Extensions and Set

Don't damage your fasteners by applying too much force. You'll know you're at the proper torque when you feel the extension spring back slightly. Made of heat-treated alloy steel, each extension is painted a different color. Overall length is 7 5/8″; diameter is 1.07″. Use with a 1/2″ impact wrench rated at 250 ft./lbs. of working torque with 90-100 psi.

Torque, ft.-lbs.	Shaft Dia.	Color		Each
65	0.36″	Yellow	4491A21	$33.60
80	0.43″	Blue	4491A22	33.60
100	0.48″	Gray	4491A23	33.60
120	0.54″	White	4491A24	33.60
140	0.59″	Aqua	4491A25	33.60

5-Piece Set—Includes one of each extension above and a plastic case.

4491A31 ..... **Per Set** $152.13

3/4″ Square Drive Impact Sockets

For information about impact sockets, see page 2798.

3/4″ Square Drive Impact Sockets and Accessories

Made of heat-treated alloy steel, sockets are premium quality and have a black finish. ***Dual-size socket*** is also called a Budd wheel socket. It's designed to remove and install dual wheels on trucks, trailers, and other vehicles. Socket is 13/16″ sq. × 1 1/2″ hex. Use the 13/16″ square opening to thread a shaft onto a wheel; use the 1 1/2″ hex opening to tighten the nut.

♣ *Note:* An O-ring with retaining pin or a 1-pc. retaining ring should be used to secure sockets and accessories to impact tools that have a hole- or a ring-and-hole style retainer. Or, use a tool with a pin-style retainer (no retaining ring needed). The *Ring ID* is the inside diameter of the ring that will fit a particular socket (rings sold separately on page 2803).

Also Available: Replacement hex bits. Please ask for 53525A1 and specify size.

	Each
O-Ring with Retaining Pin (1.4″ ID) 5552A108	$3.51
1-Pc. Retaining Ring (1.2″ ID) 5552A52	4.86
1-Pc. Retaining Ring (1.4″ ID) 5552A36	4.31
1-Pc. Retaining Ring (1.6″ ID) 5552A38	4.31
1-Pc. Retaining Ring (1.7″ ID) 5550A68	5.21
1-Pc. Retaining Ring (2″ ID) 5550A611	5.21

■ Requires two retaining rings—one for adapter, swivel-joint adapter, or extension (ring ID listed); one for socket (ring ID depends on socket).

1″ Square Drive Impact Sockets and Accessories

Sockets and accessories are premium quality and made of heat-treated alloy steel. Finish is black.

♣ *Note:* An O-ring with retaining pin or a 1-pc. retaining ring should be used to secure sockets and accessories to impact tools that have a hole- or a ring-and-hole style retainer. Or, use a tool with a pin-style retainer (no retaining ring needed). The *Ring ID* is the inside diameter of the ring that will fit a particular socket (rings sold separately on page 2804).

Also Available: 6-point deep metric sockets. Please ask for 54155A69 and specify size.

About Powered Fastening Tools

The tool you need depends on the fastener you're using. Use the chart below as a general guide. It suggests tightening torque based on using Grade 2 low-strength carbon steel fasteners. Values are approximate. For fasteners smaller than 1/4", see powered screwdrivers on pages 2816-2817 and precision hand-driven screwdrivers on pages 2830-2831.

Air tools require lubrication to operate properly. For air tool oil, see page 2175. For air hose, see pages 240-245.

Grade 2 Carbon-Steel Fastener Size:		1/4"-20	5/16"-18	3/8"-16	1/2"-13	5/8"-11	3/4"-10	1"-8	1 1/4"-7	1 1/2"-6
Max. Tightening Torque:	in.-lbs.	61	126	224	546	1088	1929	2800	5596	9737
	ft.-lbs.	5	11	19	46	91	161	233	466	811
Ratchet Wrenches (5 to 100 ft.-lbs.)										
Impact Wrenches (20 to 3000 ft.-lbs.)										
Impact Drivers (7 to 70 ft.-lbs.)										
Powered Screwdrivers (1 to 30 ft.-lbs.)										
Precision Screwdrivers (0.17 to 11 ft.-lbs.)										

Retainer Styles for Ratchet and Impact Wrenches

Quick Change— For quick assembly and changing. *Ball* and *ring* retainers are for sockets. Ball style is spring loaded. *1/4" hex chuck* retainer is for bits.

Positive Locking— For more secure retention of sockets. *Pin* style is spring loaded. *Hole-* and *ring-and-hole* styles require a retaining ring.

Ring-and-Hole Style Retainer Shown with Socket and Retaining Ring

1/2" Square Drive Air Impact Wrenches

1/2" Square Drive Economy Air-Powered Impact Wrench and Wrench Set

Use this impact wrench for jobs requiring up to 260 ft.-lbs. of torque. It's designed for intermittent, light duty use. Wrench operates in forward and reverse and has a built-in power regulator to control torque. Recommended air pressure is 90 psi. For use with impact sockets only (see pages 2798-2804).

Wrench and Socket Set

Set includes an impact wrench, a 5" long extension bar, an inline oiler, and ten 6-pt. standard inch sockets in the following sizes: 7/16", 1/2", 9/16", 5/8", 11/16", 3/4", 13/16", 7/8", 1", 1 1/16". Packed in a plastic case.

6038A32 ..... Per Set $98.87

Wrench and Socket Set

Working Torque Range, ft.-lbs.	Max. Torque, ft.-lbs.	No-Load rpm	Standard Bolt Capacity	Socket Retainer Style	Avg. cfm @ 90 psi	Air Inlet, NPT	For Hose ID	Lubrication Feed	Lg.	Wt., lbs.		Each
50–260	260	7000	5/8"	Ring	4.5	1/4"	3/8"	Manual	7 7/8"	4.9	6038A21	$66.30

Note: Air-powered tools on this page require lubrication to operate properly.

Air-Powered Impact Wrenches

All of these wrenches operate in forward and reverse and have a metal housing to protect the hammer mechanism. They also have a built-in power regulator to control torque. Recommended air pressure is 90 psi. Use wrenches with impact sockets only (see pages 2798-2804).

Standard Duty— Best for general shop applications as well as maintenance and automotive work. Wrenches with a ring-and-hole style socket retainer do not come with an O-ring and pin (required, see page 2804).

Heavy Duty— Perfect for medium volume production, general maintenance, and construction applications. Wrenches with a hole-style socket retainer do not come with an O-ring and pin (required, see page 2804).

Super Heavy Duty— Built to provide ultimate performance, these top-of-the-line tools are durable enough for high volume production and heavy maintenance applications. Wrenches with a hole-style socket retainer include an O-ring and pin to secure the socket to the tool.

Style C— 71655A32 and 71655A36 have a lightweight, yet strong titanium housing.

Style D— 71205A33 has a rubber grip. 71655A34 has a 2″ extended shaft.

Style E— Wrench has a removable top handle.

Style F— Wrench has an 8″ extended shank and a fixed side handle.

Style H— 7177A22, 7174A54, 7174A55, and 7174A13 have a lightweight, yet strong titanium housing.

Styles J&K— Wrenches have a reversible side handle.

♠ Housing is plastic and metal.

Note: These air-powered tools require lubrication to operate properly.

For information about powered fastening tools, see page 2805.

Cordless Impact Wrenches and Drivers

Fasten and remove bolts without the limitations of a cord. Tools have a forward/reverse switch and an electric brake, unless noted. All come with a UL listed charger, two battery packs, and a carrying case, unless noted. The maximum torque is the largest value in the working torque range listed below. Tools with lithium ion batteries weigh less than similar tools with other battery types.

Use impact wrenches with impact sockets (see pages 2798-2804) and impact drivers with power bits (see pages 2818-2825).

Wrenches with light and ***drivers with light*** have a built-in, shock-proof light to improve visibility as you're working.

Style J has a right-angle head that rotates a full 360° in 45° increments. *Optional straight-head attachment* converts the tool into a straight driver.

Electric Impact Wrenches

No need to fire up your air compressor—just plug in and start working. Our electric wrenches operate on 120 VAC and deliver full torque in forward and reverse. All are double insulated and have an 8-ft. cord with two-prong plug. Wrenches are UL listed and meet OSHA requirements. Use with impact sockets only (see pages 2798-2804).

Style N wrenches are single speed. ***Style P*** wrench with ring-and-hole style socket retainer (7184A33) includes an O-ring and pin to secure the socket to the tool.

Air-Powered & Cordless Ratchet Wrenches

For information about powered fastening tools, see page 2805.

Air-Powered Ratchet Wrenches

Finish jobs quickly and with less effort using these air-powered wrenches. Turn manually for initial loosening and tightening. Wrenches operate at full torque in forward and reverse. Each has a ball-style socket retainer and a lever throttle control, unless noted. Handles are metal, unless noted. Recommended air pressure is 90 psi. Use with impact sockets and power sockets, except 6949A48, which is for use with impact sockets only. See pages 2798-2805 for sockets.

Style A—7305A57 and 6949A63 have a sealed head that keeps lubrication in and debris out.

Style C—Provide the highest torque of all our air-powered ratchets.

Style D—Wrenches are combination impact/ratchet tools with a powerful pin-clutch hammer mechanism that eliminates the need for hand tightening. The mechanism also absorbs shock to protect your hands and wrists from the twisting force of kickback.

Style E—Has extra length for increased leverage.

♣ Designed for light duty, intermittent use. ● Handle is cushioned. ▲ Handle is made of a molded composite. ♦ Push-button control.

Air-Powered Precision Ratchet Wrenches

Step up to precision ratcheting. Also known as nutrunners, these wrenches have torque-limiting mechanical clutches that allow precise fastening—great for assembly applications. The head flexes 90° for easy access to tight spaces. Wrenches operate at full torque in forward and reverse. Each has a pin-style retainer and a lever throttle control. Recommended air pressure is 90 psi. Use with impact sockets only (see pages 2798-2804).

1132A11 shuts off automatically when the torque setting is reached. 1132A1 has an adjustable cushion clutch that "slips" to indicate when the torque setting is reached.

3/8″ Square Drive Cordless Ratchet Wrenches

No outlet necessary—take these cordless ratchet wrenches wherever you need to go. Wrenches operate at full torque in forward and reverse. Furnished with a charger.

5483A31 can be used with both impact sockets and socket bits. Includes two lithium ion batteries and a canvas carrying bag. 5483A12 can only be used with impact sockets. Motor stops automatically when fastener is tight. Includes one lithium ion battery and a plastic case.

Working Torque Range, ft.-lbs.	Max. Torque, ft.-lbs.	Volts	No-Load rpm	Socket Retainer Style	Lg.	Wt., lbs.	***Wrenches***	Each	***Repl. Batteries***	Each	***Repl. Chargers***	Each

Note: Air-powered tools on this page require lubrication to operate properly.

Torque Multipliers

When you need more torque than your wrench can deliver, multipliers help you reach high torque values without a lot of effort. Gears in the housing multiply the amount of force (or torque) that can be applied to the fastener. For example, if the torque ratio is 1:3.3 and you apply 100 ft.-lbs., the torque output would be 330 ft.-lbs.

Multipliers torque in clockwise and counterclockwise directions. Accuracy is ±5% of torque output.

Without Anchor— Place the reaction bar against a stationary object to keep the tool in place. Multipliers *for hand tools* signal with an audible click when overtorque occurs. When those *for hand and nonimpact power tools* are overtorqued, the male output square drive shears off to protect the gear housing (an extra male square drive comes with each tool). 7295A16 and 7295A18 also have an antibacklash feature to prevent wrench from swinging back when torqued.

With Anchor— Choose a multiplier with an anchor when you need extra stability in order to apply greater force. The reaction plate is held down by placing a socket on the anchor and attaching it to a secured fastener. The anchor and the male output drive have the same square size. When overtorqued, the male output square drive shears off to protect the gear housing (an extra male square drive comes with each tool). An antibacklash feature prevents wrench from swinging back when torqued.

Adjustable Torque-Limiting Adapters

To prevent overtorquing, adapters click and release when they've reached the torque setting. Pair them with any standard square-drive tool. To set torque, remove the snap ring and locking plate, then adjust the nut. *Note:* There's no Nm scale on the adapter, so you'll need a torque tester (see page 2815) or torque wrench to check the setting.

All have a female square drive on one end and a male square drive on the other; drives are the same size. Adapters torque in clockwise and counterclockwise directions. Accuracy is 5% of the torque setting. Maximum rpm is 300. Made of steel.

Adaptable to machine and nonimpact power tool applications if used intermittently. Not for use with impact tools. For best results, choose an adapter so that your desired torque setting falls in the middle of its torque range.

Also Available: Factory-set torque-limiting adapters with 3/8″ drive and 60-, 75-, 180-, or 240-in.-lb. torque setting, or 1/2″ drive with 360-in.-lb. setting. Please ask for 6968A9 and specify drive size and torque setting.

Electronic Torque Analyzers and Sensors

Use an analyzer with a sensor (sold separately) to display, store, collect, and download torque readings for a variety of applications—just switch sensors as you switch jobs. Each sensor has a 4 ft. long cable, except 5833A27, which has an 8-ft. long cable. Not for use with power tools.

Torque Analyzer— Stores up to 3,500 readings, which can be downloaded to a PC with an RS-232 cable (sold separately). The LCD shows track display (values as they're measured) or peak display (high value). Torque can be measured in ft.-lbs., in.-lbs., in.-oz., Nm, dNm, m-kg, or cm-kg. Use the keypad to specify high and low torque limits. Also features an audio output jack for use with headphones (the unit beeps at 110% of torque setting). Measures 6″ Lg.×3″ Wd.×2 1/2″ Ht. Includes a rechargeable NiCad battery and charger. Comes in a plastic case.

Attachable Sensors— Sensors fit between your socket and driver and plug into the back of the torque analyzer. They have a female square drive on one end and a male square drive on the other; drives are the same size. Accuracy is ±1% of torque setting for 10-100% of torque range. Come with certificate of calibration traceable to NIST.

Hand-Held Sensors— No need for extra tools; grasp the knurled sensor and let your hand work as the driver for low-torque applications. Sensors have a male square drive. Accuracy is ±2% of torque reading for 10-100% of torque range. Come with certificate of calibration traceable to NIST.

About Torque Tools

Torque is a measure of turning or twisting force. It is calculated by multiplying force by distance. For example, if you applied 10 lbs. of force with a 2-ft. wrench, you would get 20 ft.-lbs. of torque; if you applied 20 lbs. of force with a 1-ft. wrench, you would also get 20 ft.-lbs. of torque.

Selecting the Correct Torque Range— For the most accurate performance, the maximum torque you're applying should fall near the middle of the tool's torque range. For example, if you're applying 50 ft.-lbs. of torque, choose a wrench with a range of 5 to 100 ft.-lbs., rather than a range of 5 to 50 ft.-lbs.

Accuracy— Accuracy is usually given for 20-100% of a tool's torque range. For example, if the torque range is 20 to 120 in.-lbs., the accuracy statement is true for measurements between 40 and 120 in.-lbs. Below 20% of the torque range, the tool's accuracy often drops significantly.

Certificates of Calibration— Torque tools are calibrated by the manufacturer; the certificate provides proof of calibration and the date it was completed. Shelf life does not affect the calibration of a torque tool. Common practice is to consider the calibration life to begin at the date of purchase or first use.

Conversions— The chart below shows how to convert between some of the units used to measure torque:

Nm = Newton meters
dNm = deci Newton meters
cNm = centi Newton meters

To Convert From	To	Multiply By
in.-lbs.	in.-oz.	16

Torque Wrenches

Premium Electronic Torque Wrenches

Track applied torque and tighten fasteners with precision. The large LCD shows track display (values as they're measured) or peak display (highest value). When displaying a measurement, wrenches show their sequence number and the total number of stored values. They store up to 4,000 torque values and recall up to 999 measurements in order of operation. You can set the desired torque along with high and low tolerance limits. Lights and audible alarm signal when lower limit is met or upper limit is exceeded.

Accuracy is ±1% of torque setting for 20-100% of torque range (for both clockwise and counterclockwise use). Torque can be measured in in.-lbs., ft.-lbs., Nm, dNm, cm-kg, and m-kg. Download values using an RS-232 cable (sold separately). Wrenches use a 9-volt battery (included) and come in a plastic case with certificate of calibration traceable to NIST.

Electronic Torque Wrenches with Rotating Dial

Rotate the large digital display so you can read it at any angle. Torque wrenches show a track display (values as they're measured) or a peak display (highest value). A touch of a button sets pass/fail mode for quick target tolerance settings from ±1% to ±10%. Colored lights and audible alarm signal to let you know whether you're above, below, or within your target torque range. Accuracy is ±1% of torque setting for entire torque range (for clockwise and counterclockwise use). Wrenches are chrome-plated steel with a plastic grip. They use a 9-volt battery (included), and come in a plastic case with certificate of calibration traceable to NIST.

Electronic Torque Wrenches

Set your torque value with the touch of a button. Digital display, colored lights, and an audible alarm let you know whether you're above, below, or within your target torque. Wrenches show a track display (values as they're measured) or a peak display (highest value). They have a reversible ratchet head and come in a plastic case with certificate of calibration traceable to NIST.

8976A41 and 8976A12 have a steel body and a metal grip. Accuracy is ±2% (for clockwise use) and ±3% (for counterclockwise use) of torque setting for 20-100% of torque range. Require four AAA batteries (sold separately).

8976A31 has a steel body and a plastic grip. Accuracy is ±3.5% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use). Requires three AA batteries (sold separately).

Adjustable Click-Style Torque Wrenches

Turn the handle to the desired torque setting and lock in place. When torque setting is reached, wrenches signal with an audible click and an impulse in the grip. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use) and ±6% of torque setting for 20-100% of torque range (for counterclockwise use) except 85555A324, A325, and A328, which have ±3% accuracy in both directions. Body is steel. Wrenches come in a case (unless otherwise indicated) with a certificate of calibration traceable to NIST.

Style C has a head that pivots 15° up and down.

Style E are insulated, tested to 1,000 VAC, and meet IEC 900 specifications. Handle is nonconductive. Case not included.

Note: To relieve pressure on the spring and maintain calibration, return setting to lowest reading on scale when not in use.

● Accuracy is not rated for counterclockwise use. ★ For clockwise use only.

For information about torque tools, see page 2810.

Easy-Read Adjustable Click-Style Torque Wrenches

Forget squinting at scales and converting measurements—these wrenches display torque settings in two easy-to-read values. Set the torque using the knob at the end of the grip. When your torque setting is reached, the wrench signals with an audible click, an impulse in the grip, and a momentary release.

All wrenches have a reversible ratchet head, a chrome-plated steel body, and a rubber grip, except 5274A15, which has a metal grip. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use). Accuracy is not rated for counterclockwise use. Come in a plastic case with certificate of calibration traceable to NIST.

Note: To relieve pressure on the spring and maintain calibration, return setting to lowest reading on scale when not in use.

Square Drive	Torque Range	Graduations	O'all Lg.		
in.-lbs., Nm					
3/8″	25 to 250 in.-lbs., 3 to 27.8 Nm	2 in.-lbs., 0.2 Nm	14″	5274A11	$152.93

1/2″	25 to 250 ft.-lbs., 35 to 340 Nm	2 ft.-lbs., 2 Nm	21 3/4″	5274A14	169.90
3/4″	100 to 600 ft.-lbs., 135 to 815 Nm	50 ft.-lbs., 65 Nm	43″	5274A15	488.85

No-Reset Adjustable Click-Style Torque Wrenches

Unique split-beam design inside the wrench body minimizes friction and wear and eliminates the need to return to the lowest scale reading after each use. To set torque, turn knob to the desired setting. When your torque setting is reached, the wrench signals with an audible click and a momentary release. Use the chart above the display to convert ft.-lbs. to Nm. Wrenches have a chrome-plated steel body and a metal grip. They come in a plastic case with certificate of calibration traceable to NIST.

Flex Head—The nonreversing ratchet head flexes 15° to work around obstacles. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use).

Fixed Head—Has a reversible ratchet head. Three components detach for compact storage. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use). *Note:* You must use all pieces to obtain correct readings.

Square Drive	Torque Range	Graduations	O'all Lg.		
Flex Head					
3/8″	20 to 100 ft.-lbs.	2 ft.-lbs.	17 5/8″	5387A22	$195.87

3/4″	200 to 600 ft.-lbs.	10 ft.-lbs.	48 1/2″	5387A56	373.92

High-Accuracy Flat-Beam Torque Wrenches

The most accurate nonelectronic torque tools we offer have almost no moving parts and are virtually maintenance-free. Memory pointers show the torque reached. Body is steel; grip is plastic. Accuracy is ±2% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use). Wrenches come with certificate of calibration traceable to NIST.

Also Available: Wrenches with metric (Nm) scales. Please ask for 5358A95 and specify grip style (straight or ball), square drive (1/4″, 3/8″, or 1/2″), and maximum torque (2.5, 5, 12, 22, 34, 70, 140, or 210 Nm).

Economy Round-Beam Torque Wrenches

The grip pivots and transmits torque directly to the indicator needle. Body is steel; grip is plastic. Accuracy is ±7% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use).

Square Drive	Torque Range	Graduations	O'all Lg.		
Straight Grip—in.-lbs., Nm

For information about torque tools, see page 2810.

Interchangeable-Head Click-Style Torque Wrenches

Interchangeable heads let you tackle several jobs with one torque wrench. Wrenches have a pin lock for a secure connection between handle and head (handles and heads sold separately). When torque setting is reached, wrenches signal with an audible click and a momentary release. They torque in both clockwise and counterclockwise directions. To reverse direction, remove head, turn handle over, and reattach head. *Note:* Do not exceed maximum torque of handle or head.

Handles— Accuracy is ±4% of torque setting for 20-100% of torque range. Come with certificate of calibration traceable to NIST.

Adjustable handles have a steel body and a rubber grip. Turn grip to set torque, then lock in setting. *Note:* To relieve pressure on the spring and maintain calibration, return setting to lowest reading on scale when not in use. *Factory-set handles* have a steel body and a vinyl grip.

Heads— All heads have one-piece construction and a consistent length to the center of the fastener, so you don't need to recalibrate handles when changing heads. Made of cast alloy steel.

¼″ Square-Drive Torque Wrench/Drivers

Check clockwise and counterclockwise torque on small fasteners. The dial faces the user for easy reading. Tools are nonratcheting and have a memory pointer to show maximum torque reached. Body is die cast zinc; grip is plastic. Overall length is 8⅝″. Accuracy is ±2% of torque setting for 20-100% of torque range. 54765A14 and 54765A15 have a ¼″ female square drive in handle for extra leverage when applying high torque levels.

Come in a plastic case with certificate of calibration traceable to NIST.

For information about torque tools, see page 2810.

Adjustable Click-Style Pipe-Head Torque Wrenches

Head is ideal for tightening applications involving pipe, fittings, or plumbing. Just turn the end of the handle to desired torque setting. Wrench signals with an audible click when torque is reached. Accuracy is ±5% of torque setting for entire torque range (for clockwise use). Jaws are serrated. Wrenches have a steel body and a rubber grip, except 5778A14, which has a metal grip. They come with certificate of calibration.

For Dia.	Torque Range	Graduations	O'all Lg.		
1/2"-1 1/2"	100 to 400 in.-lbs.	5 in.-lbs.	13 1/8"	5778A11	$617.08

1/2"-1 1/2"	30 to 200 ft.-lbs.	2 ft.-lbs.	30 1/8"	5778A13	754.92
1" -2"	60 to 300 ft.-lbs.	3 ft.-lbs.	42 1/2"	5778A14	1,096.31

Factory-Set Click-Style Torque Wrenches

When torque setting is reached, wrenches signal with an audible click and a momentary release. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use). Wrenches have a reversing ratchet head, a steel body, and a vinyl grip. They come with certificate of calibration traceable to NIST.

To Order: Please specify exact torque from the ranges listed.

Factory-Set Slip-Release Torque Wrenches

Straight Handle

T-Handle

When torque setting is reached, wrenches slip to prevent overtorquing. All torque clockwise and also have a counterclockwise mode: torque, ratchet (nonreversing), or lock up. Lock-up mode allows you to loosen fasteners. Made of chrome-plated steel. Come with certificate of calibration traceable to NIST.

Straight Handle— Accuracy is ±4% of torque setting for entire torque range (in clockwise mode).

T-Handle— Accuracy is ±0.5 in.-lbs. for 2 to 10 in.-lb. torque settings, ±1 in.-lb. for 11 to 25 in.-lb. torque settings, ±2 in.-lbs. for 26 to 50 in.-lb. torque settings, and ±4 in.-lbs. for 51 in.-lb. and higher torque settings (in clockwise mode).

To Order: Please specify exact torque setting from the ranges listed.

Also Available: Metric factory-set wrenches. For straight handle wrenches, please ask for 7151A999 and specify square drive (1/4", 3/8", or 1/2") and exact torque setting. For T-handle wrenches, please ask for 5507A999 and specify square drive (1/4", 3/8", or 1/2") and exact torque setting.

Dial Torque Wrenches

Dual Scale

Single Scale

Dual Scale

Monitor torque as it's being applied. Tools have a memory pointer to show maximum torque reached. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use). All have a steel body and a rubber grip. They come in a case with certificate of calibration traceable to NIST.

Single Scale— Shows units in in.-lbs.

Dual Scale— Show units in in.-lbs. and Nm or ft.-lbs. and Nm.

For information about torque tools, see page 2810.

Dial Torque Tool Testers

Check the accuracy of your torque wrenches and screwdrivers. A memory needle remains on maximum torque reading until manually reset to zero. To use with click-style torque wrenches, take the reading from the main dial.

Units measure in both clockwise and counterclockwise directions. Accuracy is ±2% of torque reading for 20-100% of torque range. A female-to-female square drive adapter is included.

In.-lb. testers are 8″ Lg.× 4″ Wd.×2¼″ Ht.; ***ft.-lb.*** testers are 12⅞″ Lg.×4″ Wd.×2½″ Ht. Both testers have ¼″ dia. mounting holes and a steel housing.

Furnished with a certificate of calibration traceable to NIST.

Note: Not for use with power or impact tools.

Male Sq. Drive	Torque Range	Graduations

½″	0 to 200 ft.-lbs.	5 ft.-lbs.	**7154A35**	410.82

Low-Torque Precision Gauges

Gauges precisely measure low torque values. They have both a top dial and side scale with memory pointers that remain on the maximum torque reading, unless noted.

To use, finger-tighten the three-jaw chuck on the object to be measured, then twist either the gauge or object.

Gauges measure in both clockwise and counterclockwise directions. Accuracy is ±2% of torque reading for 10-100% of torque range. The housing is aluminum. All have an aluminum chuck except 83395A14, A29, and A13, which have a steel chuck. Plastic storage case included.

Also Available: Gauges with certificate of calibration traceable to NIST. Please ask for 83395A11 and specify torque range.

Torque Range	Graduations	Chuck Cap.	Head Dia.

♣ Has no memory pointer.

Electronic Torque Tool Testers

Get quick and accurate torque measurements on the easy-to-read digital display.

Testers feature three modes of operation: track (readings go up and down as torque tool moves), peak hold (holds the top torque value), and first peak (for micrometer click-style wrenches). It also displays range in Nm.

Testers measure in both clockwise and counterclockwise directions. Accuracy is ±1% of torque reading for 10-100% of torque range. A female-to-female square drive adapter is included.

Units are 4½″ Ht.×6″ Wd.×6″ Dp. and have a steel housing with ⅜″ dia. mounting holes. 9-volt battery included.

Furnished with a certificate of calibration traceable to NIST.

Note: Not for use with power or impact tools.

Torque Gauges/Screwdrivers

The 3″ dial makes it easy to measure torque as you apply it with these combination gauge and screwdrivers.

Accuracy is ±3% of torque reading for entire range. Drivers have a ¼″ female hex drive and include a ¼″ hex × ¼″ square-drive adapter, plus two ¼″ hex-shank insert bits: one ¼″ slotted and one #2 Phillips. See pages 2818-2825 for additional ¼″ hex-shank insert bits. Plastic storage tube included.

Furnished with a certificate of calibration traceable to NIST.

Nonadjustable Torque Screwdrivers

Maintain precision in repetitive fastening applications with factory set, nonadjustable torque. Tools slip to prevent over-torquing once the torque setting is reached, except Style F, which clicks.

Accuracy is ±6% of torque setting for 20-100% of torque range. Drive is ¼″ hex female and accepts any ¼″ hex-shank bit (see pages 2818-2825 for bits). Drivers have an aluminum housing.

Furnished with a certificate of calibration traceable to NIST.

Styles A and ***D*** torque in both clockwise and counterclockwise directions and include five colored sleeves.

Styles B, C, E, and ***F*** are for clockwise use only. ***Styles B, C,*** and ***E*** are offered in four sleeve colors.

To Order: Please specify the exact torque setting required. For Styles B, C, and E, also specify sleeve color (blue, gold, green, or red).

For information about torque tools, see page 2810.

Adjustable Slip-Release Torque Screwdrivers and Sets

A&C

B

D

E

Adjust torque by turning the grip or collar. A slip-release mechanism prevents over-torquing once the setting is reached. Drivers torque in both clockwise and counterclockwise directions. Clockwise accuracy is ±6% of torque setting for 20-100% of torque range. Accuracy is not rated in counterclockwise direction. Drive is 1/4″ hex female and accepts any 1/4″ hex-shank bit (see pgs. 2818-2825 for bits).

Furnished with certificate of calibration traceable to NIST.

Styles A and ***C*** have an aluminum housing.

Styles B and ***E*** have a lock that prevents accidental adjustment and an aluminum housing with antistatic rubber grip. *Style E* also have a removable T-bar for extra leverage.

Style D is graduated in both inch and metric scales. It has an aluminum housing and vinyl grip cap.

Adapter

1/4″ Hex × 1/4″ Square-Drive Male Adapter— 1″ long

52735A21 ..... $2.25

Sets

22-Piece Set— Includes Style C torque screwdriver, plus miniature and 1/4″ hex-shank insert bits. Miniature bits include slotted size 3/32″; hex size 0.035″; socket size 7/64″; and a miniature bit adapter. The 1/4″ hex-shank bits include slotted sizes 1/8″, 3/16″, 7/32″, and 1/4″; Phillips sizes #0 and #1; hex sizes 0.050″, 1/16″, 5/64″, 3/32″, 1/8″, and 5/32″; socket sizes 1/8″, 3/16″, 1/4″, and 5/16″; and a 1/4″ hex × 1/4″ square-drive adapter. Packed in a plastic case.

8554A61 ..... $349.69

29-Piece Set— Includes Style D torque screwdriver, plus the following 1/4″ hex-shank insert bits: slotted sizes 1/8″, 5/32″, 1/4″, and two 9/32″; Phillips sizes #0, #1, #2, and #3; Torx sizes T10, T15, T20, T25, T30, and T40; square-recess sizes #0, #1, #2, and #3; Pozidriv® sizes #1 and #2; and hex sizes 5/64″, 3/32″, 7/64″, 1/8″, and 9/64″. Set also comes with a 1/4″ hex × 1/4″ square-drive adapter and 1/4″ bit holder. Packed in a plastic case.

5716A52 ..... $266.81

Interchangeable-Blade Click-Style Torque Screwdrivers

Handle

Blade

Select a handle based on torque, then add a slotted-, Phillips-, or Torx-tip blade that fits your needs. Screwdrivers signal with an audible click when torque is reached. Accuracy is ±6% and calibrated to DIN standard.

Choose from nonadjustable and adjustable torque handles. ***Handles*** have a slip-resistant rubber grip and are furnished in a plastic case. ***Blades*** are chrome-plated steel and include a plastic sleeve marked with the blade size. Sleeves are gray on slotted blades, blue on Phillips blades, and green on Torx blades.

Milwaukee Electric Screwdrivers

Torque Control

Control either torque or depth with these variable speed, reversing screwdrivers. They accept 1/4″ hex-shank screwdriver bits (see pages 2818-28252 for bits). Tools are double insulated and come with a 10-ft. cord with two-prong plug. They operate on 120 VAC, 60 Hz. UL listed, CSA certified, and meet OSHA requirements.

Torque Control— Twist the adjusting collar to set torque. The clutch slips when torque is reached to prevent over-torquing. Includes three bits and a bit holder.

Depth Control— Twist the nosepiece to set driving depth. The nosepiece can be removed to access tight spaces. Furnished with a 5/16″ hex socket driver.

	Torque Range, in.-lbs.	Max. Torque, in.-lbs.	No-Load rpm	Maximum Fastener Size	Amps	Lg.	Wt., lbs.	Milwaukee Model No.

Precision Torque Control Electric Screwdrivers

Lever Operated

The motor stops when a set torque is reached for precise torque control. To adjust torque, remove the flange and turn the torque ring. Tools are for intermittent use (0.5 seconds on for every 3.5 seconds off). They accept 1/4″ hex-shank bits (see pages 2818-2825 for bits). Screwdrivers have a forward/reverse switch and 8-ft. cord with three-prong plug. They operate on 115 VAC, 50/60 Hz. UL listed and meet OSHA requirements.

Lever Operated— Depress lever to activate motor.

Push-to-Start— Press tip against fastener to activate motor.

Torque Range, in.-lbs.	No-Load rpm	Maximum Fastener Size	Amps	Lg.	Wt., lbs.	*Lever Operated*		*Push-to-Start*	
5-15	2,000	#6	0.75	11 1/4″	1.6	**5809A11**	$1,125.82	**5809A13**	$1,125.82

For information about powered fastening tools, see page 2805.

Cordless Screwdrivers

Battery-powered screwdrivers are easy to maneuver and operate in forward and reverse directions. They accept 1/4″ hex-shank screwdriver bits (see pages 2818-2825 for bits), are UL listed, and meet OSHA requirements. Chargers operate on 120 VAC.

(A) Nonadjustable Torque Control— Economical and for intermittent use. Internal battery and 12-hour charger included.

(B-E) Adjustable Torque Control— Set torque with the adjustable clutch. Choose from flex and pistol-grip handle styles.

Style B have a two-position flex handle. 7183A71 has a six-position clutch to adjust torque. NiCad battery pack and one-hour charger included. 7183A44 has a 21-position clutch to adjust torque and auto shut-off to prevent over-torquing. Two lithium ion battery packs and a 30-minute charger included. *Style C* has a three-position flex handle. Internal battery and 12-hour charger included.

Styles D and *E* are compact and ideal for corners and tight spaces. They have a pistol grip, a 15-position clutch to adjust torque, and a built-in light to illuminate work surfaces. Two lithium ion battery packs, a 30-minute charger, and a storage bag included. *Style E* is not rated for torque.

(F) Nonadjustable Torque/Depth Sensitive— Adjust the nosepiece to set and maintain consistent screw depth. Includes two NiCad battery packs, a one-hour charger, and a storage case.

●Not rated for torque.

Air-Powered Screwdrivers

Screwdrivers operate in both forward and reverse directions and have bit holders that accept 1/4″ hex-shank power bits (see pages 2818-2825 for bits). Recommended operating pressure is 90 psi, unless noted.

Nonadjustable Torque Control— Use for general maintenance jobs.

Adjustable Torque Control— A spring-loaded clutch lets you set the correct torque for your application. Screwdrivers ratchet when set torque is reached, unless noted.

Style M has a head angled 90° for hard-to-reach areas.

▲Recommended operating pressure is 85 psi and avg. cfm rating is at 85 psi. Screwdriver stops when set torque is reached.

Angled Heads for Cordless Screwdrivers

Head has a 75° angle for access to confined spaces and a 360° adjustable thumb flange for torque control. Accepts 1/4″ hex-shank screwdriver bits (see pages 2818-2825 for bits). Max. torque is 100 in.-lbs.; max. rpm is 400. Made of steel.

5803A91 ..... $31.51

Automatic Screw Feeders

Pour screws into the machine's hopper and they automatically line up on the included rail to be picked up with a magnetic-tipped screwdriver. Pick-up rate is up to two screws per second. Max. screw length is 18 mm (11/16″). Operates on 120 VAC, 60 Hz; power is converted to 12 VDC.

About Screwdriver Bits

Insert Bit

Power Bit

Threaded-Shank Bit

Screwdriver bits are the tips of a screwdriver blade that can be interchanged.

Insert bits are compact bits that allow quick and easy bit changes. Use them in hand drivers (see page 2828) and with a bit holder (see page 2826) in power tools.

Power bits fit directly into power tools to provide less wobble and offer more reach for recessed holes. They are easily recognized by the groove in the shank.

Threaded-shank bits are compact bits that thread directly into your driving tool.

How to Choose a Bit— For information on how to choose the correct size Phillips bit, see page 2832.

Torque-Absorbing Phillips Bits

Insert

Power

Well suited for high-torque applications, these bits absorb shock and twisting forces—they wear before they break. Bits have a 1/4″ hex shank.

Titanium-nitride coated bits are wear resistant.

Diamond coated bits have better grip on the fastener than titanium-nitride coated bits and are also wear resistant.

Tungsten-carbide coated bits grip the fastener and are the most wear resistant of the three coated bits.

Shallow-Depth Bits

Phillips Insert
Square-Recess Power

The exterior stop ring prevents fasteners from being driven too deep. Well suited for use with soft materials such as wood, fiberboard, decking, paneling, drywall, and insulation board. Bits have a 1/4" hex shank.

5/8″	1 3/8″	3 1/4″	5971A39	30.78

Extra-Strong Lobular Power Bits

Four times stronger than ordinary power bits, these bits make contact on the flat side of fasteners rather than on the corners to dramatically reduce breaks and damage from stripping. Bits are magnetic.

Hex Size	Hex Dp.	Lg.		
1/4″	3/32″	1 3/4″	7291A71	$2.15

7/16″	13/64″	2 5/8″	7291A78	4.42

Torx-Plus Bits

Designed for use with Torx-Plus screws, these bits provide better torque transfer and torsional strength as well as longer tool life than standard Torx bits. They also reduce stripping.

Note: Bits are not compatible with standard Torx screws.

★ Nonmarring magnetic base. ● Includes split ring key chain.

Insert-Bit Holders

(E) Plain End—Have a retaining ring, except 7225A24. Bodies are stainless steel.

(F) Knurled End—Tightens onto the bit for a more secure hold. Bodies are stainless steel, except 7225A42 and A49 have a bronze body.

(G) Wobble-Reducing Plain End—Machined from a single piece of metal to create a concentric holder with less wobble. Bodies are stainless steel, unless noted.

(H) Quick-Change Chuck—Pull back the chuck to lock or release bits. Body is aluminum.

(J) Quick-Change Click-Lock Chuck—Chuck clicks and locks in open position to remove bits; locks in closed position to hold them. Bodies are stainless steel.

(K) Impact Plain End—Designed for use with impact drivers. Body is steel.

(L) Screw Guiding—Keep fasteners in position and prevent wobbling. Outer sleeve slides over screw head. Maximum screw head diameter is 3/8". Bodies are stainless steel. Sleeve is aluminum, unless noted.

(M) Mini Bit Holder—Accepts 4 mm hex-shank bits. Made of steel.

Ratchet Wrenches— Knurled fingertip knobs help turn fasteners more quickly. Single-end wrench holds 1/4″ hex-shank bits. Double-end wrenches hold both 1/4″ and 5/16″ hex-shank bits.

Style	Lg.		
Single-End Offset	4 1/8″	52725A31	$11.79
Double-End Offset	5 3/8″	52815A11	14.86
Double-End Straight	5 1/2″	52815A21	14.68

Magnetic-Bit Screwdriver Sets

A strong magnet in the shank holds bits firmly in place. Instead of using multiple screwdrivers, simply change the bit to match your fastener. Tools have steel shanks and plastic handles, unless stated otherwise. Bits are steel. For additional insert bits, see pages 2818-2825.

***A* Ergonomic Style—**Handle design reduces fatigue and provides more torque than regular screwdrivers. Bits store in handle.

***B* Quick-Release Chuck Style—**A quick-release chuck locks bits firmly in place but makes them easy to change. Handle is designed to reduce fatigue and has a bit holder that's indexed for easy identification.

***C* Insulated Style—**Insulated for safety, handle meets 1,000-volt EN 60900 specifications and is contoured for a comfortable grip. Handle has a bit holder that's transparent for easy identification.

***D* Ultra-Grip Ratchet Style—**Handle has a hard interior with a soft textured grip that allows you to achieve maximum torque with minimal effort. Handle has a three-position ratchet (left, right, and lock) for easier driving and a rotating bit holder for easy access to bits.

***E* T-Handle Ratchet Style—**Screwdrivers have a T-handle to provide a firm grip for improved torque. Ratchets have three positions: left, right, and lock. Shank is stainless steel. No bit storage.

***F* Multiposition-Grip Ratchet Style—**Use handle straight or in a pistol grip. Has two ratchet positions (left and right). Shank is aluminum alloy. Bits store in handle.

***G* Two-Speed Ratchet Style—**Use standard 1:1 speed or change to 4:1 speed where one turn of the handle equals four turns of the bit. Use 1:1 for extra torque and power, 4:1 is for fast driving. Bits store in handle.

	Hex Opening	O'all Lg.	Slotted Bit Sizes	Phillips Bit Sizes		Per Set
A	1/4"	9"	3/16", 7/32", 1/4"	#1, #2, #3	5829A35	$16.07

★ Also has T10, T15 Torx; #1, #2 Pozidriv; #1, #2 square recess bits.

Fold-Up Screwdriver Sets

5 Piece

You'll have a variety of drive styles in tools that fold like a pocket knife. Handles are steel; blades are hardened steel. Handle length is 3 5/8".

***5-Piece Screwdriver—**Includes 1/8", 3/16", 1/4" slotted sizes; #1 Phillips size; and 3/16" dia. awl.

5820A14 ..... **Each** $6.81

***6-Piece Screwdriver—**Same as the 5-piece screwdriver plus a T15 Torx blade.

5820A17 ..... **Each** $7.30

Nonmagnetic-Bit Drivers

Screwdriver Handle

T-Handle

Add bits to these nonmagnetic drivers to fasten/unfasten screws. Bits are not included (see pgs. 2818-2825 for insert bits). Shanks are steel.

***Screwdriver Handle—**Has a Type 303 stainless steel collar. An O-ring firmly holds bits in place. Handle is plastic and stores up to four bits.

***T-Handle—**The T-handle offers an improved grip and increased torque. A set screw firmly holds bits in place. Handle is steel with a plastic-coated cushion grip.

Handle Style	Hex Opening	O'all Lg.		Each
Screwdriver Handle	1/4"	8"	56055A34	$7.48
T-Handle	1/4"	6"	83385A31	16.42
T-Handle	1/4"	12"	83385A35	18.37
T-Handle	1/4"	18"	83385A38	23.21

Reversible-Bit Screwdriver Sets

With Plastic Handle

With Ultra-Grip Handle

Double your options—these screwdrivers have double-end bits to give you twice as many sizes as single insert bits. All bits are steel and have ball detents for a secure hold in the shank. Store bits in the shank. Shanks are steel. Handles are plastic, unless stated otherwise. For additional double-end insert bits, see page 2824.

***1/4" and 5/16" Hex Opening with Ultra-Grip Handle—**Handle has areas of hard and soft (multicomponent) plastic with a soft textured surface. This comfortable surface provides the best possible grip for achieving maximum torque with minimal effort. Shank has a hex shoulder that can be turned with a wrench for extra torque.

Slotted Bit Sizes	Phillips Bit Sizes	Torx Bit Sizes	O'all Lg.		Per Set
5/16" Hex Opening

***Extension for Screwdrivers with 5/16" Hex Opening—**For use with 6981A. Use one or more extensions to lengthen your reach. 5 1/2" long.

6981A94 ..... **Each** $1.95

Reversible-Blade Screwdriver Set

Snap the double-end blades into the handle and this screwdriver is ready to use. A spring lock holds blades in perfect alignment. Handle is plastic and 4 1/8" long. Overall length is 7 1/2". Includes double-end alloy steel blades in 3/16", 1/4", and 5/16" slotted sizes; #1, #2, and #3 Phillips sizes. Packed in a vinyl pouch.

5817A1 ..... **Per Set** $23.64

Lighted Magnetic-Bit Screwdriver Set

A battery-operated light illuminates fasteners in dark spaces while a magnet in the shank holds bits in place. Shank is steel. Handle is plastic and has a rotating bit holder for easy access to bits. Overall length is 9". Set includes seven 1/4" hex-shank steel insert bits: 5/32" and 1/4" slotted; #1, #2, and #3 Phillips; T15 Torx; and #2 square recess. Requires two AA batteries (included).

5509A35 ..... **Per Set** $13.49

Push/Pull Spiral-Action Screwdriver Set

Push on the handle to drive or remove screws or drill holes rapidly. Accepts 1/4" hex insert and power screwdriver bits and drill bits. A sliding switch changes easily between forward, reverse, and lock positions. Includes five 3" long power bits: 7/32" and 1/4" slotted, #1 and #2 Phillips, and 1/4" drill bit. Bits are held by a quick-change chuck. Screwdriver length is 12" when closed and 17" when extended. Made of steel with a plastic handle. For additional bits, see pages 2818-2825.

5693A84 ..... **Per Set** $35.14

Wedge-Grip Slotted Screw Starters

Hold and start slotted screws with one hand. Grip the handle and move sleeve forward with your thumb, wedging the split blades into the screw slot for a firm hold. After the screw is started, release it from starter by pulling the sleeve back to the handle. Blades are steel; handles are plastic. For slotted screws only. Not intended for final tightening.

Vinyl-coated steel blades are nonconductive. Not rated for high-voltage applications.

Screw Hole Starter

Tapered screw point accurately marks, starts, and threads holes in wood and other nonmetals. Starter has a steel blade and plastic handle. Shank is 1/4″ Dia.×3″ Lg. O'all length is 6 11/16″. The threaded tapered point is 9/16″ long.

5352A11 ..... **Each** $4.25

Universal Screw Starter

Start almost all screw types—this tool can handle #4-#12 Phillips, hex socket, T10-T30 Torx, clutch-head, square-recess, Pozidriv®, Frearson, and Torq-Set® screws. Just push sleeve forward to close tips and insert starter into the screw head. Pull sleeve back to open tips and grip screw. Once threads are started, the tool releases the screw automatically. Made of aluminum with steel tips. End opposite the tip has a permanent magnet to retrieve fasteners. Overall length is 5 5/8″. Not intended for final tightening.

74265A88 ..... **Each** $7.15

Spring-Grip Screw Starters and Drivers

Start and drive screws with one tool. Extend the gripper forward past the blade end and insert into the screw head. The gripper has spring action to firmly hold screws while starting, even in awkward places. Push gripper back to the handle and tool becomes a regular screwdriver. Blades are steel; handles are plastic.

8-Piece Slotted and Phillips Set— Includes both of the sets listed above.

5689A53 ..... **Per Set** $27.30

Nut Starter

Insert closed gripper tips into nut, then pull the sleeve back to open tips and grip nut. Starter releases from nut as the threads are engaged. Fits 4-40 thread; use with nut sizes 3/32″ to 5/16″ and 2.5 mm to 8 mm. Handle is aluminum and gripper tips are carbon steel. Overall length is 5 1/8″. Not intended for final tightening.

5738A62 ..... **Each** $7.25

Twist-Tip Screw Starters

A one-handed twist is all it takes to start screws. Insert the tip into the fastener, push down, and turn to secure the tip into the fastener head. As the fastener is tightened, the starter tip releases automatically. Not intended for final tightening. Tips are steel.

Steel Insulated Body— End magnet (opposite the tip) allows you to retrieve fasteners. Insulated handles are tested to 1,000 volts. Starters meet IEC 900 specifications.

Nylon Body— Body is nonconductive. Starters do not have a magnetic end.

Aluminum Body— End magnet (opposite the tip) allows you to retrieve fasteners (except double end starter with aluminum body).

Double End— Starters have a slotted tip on one end and a Phillips tip on the other. They do not have a magnetic end.

Miniature Screw Starters

Hold and start small screws with ease. Simply push down on the top of the starter to open the tips and grasp the screw. Tips are spring-loaded so they snap back after the screw is started. Starters have a rotating aluminum cap on the end of the handle. Apply pressure to the cap with your index finger or palm and turn the body of the starter for precision control. Handles are zinc-plated brass; blades are hardened chrome-plated steel. Not intended for final tightening.

Miniature Precision Reversible-Blade Screwdriver Sets

Avoid the hassle of individual screwdrivers. Sets have one handle and reversible blades to offer a wide range of sizes. Blades are steel and 4 45/64″ long. Handles are plastic, conductive, and static-dissipative (ESD safe). They are 4 21/64″ long and have a locking collet chuck that allows you to adjust blade length. A rotating cap on the handle offers precision control. Just apply pressure to the cap with your index finger or palm and turn the body of the screwdriver. ***Warning:*** Since the handles are conductive, tools must not come in contact with sources of electrical power.

6-Piece Slotted and Phillips Set— Includes adjustable handle and five blades in the following sizes:
Slotted: 0.059″, 0.079″, 0.099″, 0.118″, 0.138″, 0.158″
Phillips: #000, #00, #0, #1

		Per Set
In Canvas Pouch	7271A37	$44.42
In Metal Box	7271A43	56.16

5-Piece Torx Set— Includes adjustable handle and four blades in the following sizes: T6, T7, T8, T9, T10, T20, and two each T15 Torx. Packed in a plastic box.

7271A45 ..... **Per Set** $27.40

9-Piece Slotted, Phillips, and Torx Set— Has a plastic box. Includes adjustable handle and eight blades in the following sizes:
Slotted: 0.059″, 0.079″, 0.099″, 0.118″, 0.138″, 0.158″
Phillips: #000, #00, #0, #1
Torx: T6, T7, T8, T9, T10, T15

7271A46 ..... **Per Set** $55.22

Replacement Handle

Handle has a locking collet chuck to allow you to vary blade length.

Miniature Precision Plastic-Handle Screwdrivers

The right size for working with electronics, precision components, and small-parts assembly. Handles are made of plastic and are molded to the blade. They have a rotating cap for precision control. Just apply pressure to the cap with your index finger or palm and turn the body of the screwdriver. Blades are hardened chrome-plated steel, unless noted.

Screwdrivers and Sets— A slim ergonomic handle provides a comfortable grip. Tips have a chrome finish. The tips are nonslip, except the tips on Pozidriv® blades.

ESD Static-Dissipative Screwdrivers and Set— For areas where electrostatic discharge is a concern. Handles are impact resistant and conductive. ***Warning:*** Since the handles are conductive, tools must not come in contact with sources of electrical power.

■ Blades are hardened and tempered chrome vanadium steel with a black-oxide finish.

7-Piece Slotted and Phillips ESD Static-Dissipative Set— Includes screwdrivers in slotted sizes 0.063″, 0.078″, 0.094″, and 0.141″; Phillips sizes #00, #0, and #1.

7440A41 ..... **Per Set** $35.31

Miniature Precision Ceramic-Blade Screwdrivers

Standard

Reversible-Bit Set

Blades are made of zirconia ceramic, so they're nonconductive and nonmagnetic—perfect for aligning and adjusting electronics or miniature components. The blades resist most acids and the adherence of solder. Plus, they don't shed metal particles, making them suitable for clean room use. Handles are antistatic plastic. Furnished with a cap to protect blade when not in use. *Note:* Not recommended for high torque applications.

Standard Screwdrivers— A rotating cap on the handle offers precision control; just apply pressure to the cap with your index finger or palm and turn the body of the screwdriver.

Standard Screwdrivers—Slotted Blades

0.070″	4 1/4″	5879A23	11.57
0.102″	4 1/4″	5879A24	11.57

Reversible-Bit Screwdriver Set

Includes handle and two reversible bits in the following sizes: 0.035″ and 0.070″ slotted; #0 and 1.7 mm Phillips. A plastic sleeve holds bits in place. Overall length is 6″.

5879A45 ..... **Per Set** $20.60

Antislip Fluid

Put slipping screwdrivers, hex keys, and pliers in their place. A single drop of this nontoxic, nonstaining, noncorrosive fluid increases the grip between screw and tool by as much as 700%.

1/2-oz. Tube ..... 53795A21 **Each** $5.67

Miniature Precision Metal-Handle Screwdriver and Tool Sets

Use for assembling and repairing small parts. Also known as jewelers' screwdrivers, these tools have a hardened steel blade for durability. Handles have a rotating cap. Apply pressure to the cap with your index finger or palm and turn the body of the screwdriver for precision control. Screwdrivers have a 1 13/16″ blade length and 4″ overall length. Blades are replaceable. ***Nonmagnetic replacement blades*** are for both nonmagnetic and magnetic screwdrivers and sets.

Nonmagnetic Screwdrivers and Nonmagnetic Screwdriver Sets— Handles are knurled and made of steel. They are conductive and can be used in situations where electrostatic discharge is a concern. ***Warning:*** Since the handles are conductive, tools must not come in contact with sources of electrical power.

Magnetic Screwdriver Sets— Screwdrivers have a knurled aluminum handle that contains a magnet to transfer magnetism to the tip of the blade.

Nonmagnetic Screwdriver and Tool Sets— Include a variety of tools. Screwdrivers are the same as *nonmagnetic screwdrivers* above, unless stated otherwise. Include a partitioned vinyl case.

Nonmagnetic Screwdriver Sets

6-Piece Slotted Set— Includes six screwdrivers in sizes 0.025″, 0.040″, 0.055″, 0.070″, 0.080″, and 0.100″. Packed in a vinyl pouch.

5714A4 ..... **Per Set** $21.70

4-Piece Phillips Set— Includes four screwdrivers in sizes #000, #00, #0, and #1. Packed in a vinyl pouch.

5714A23 ..... **Per Set** $21.70

6-Piece Slotted, JIS, and Phillips Set— Packed in a vinyl pouch. Includes six screwdrivers in the following sizes:
Slotted: 0.040″, 0.070″, 0.100″
JIS: #00
Phillips: #0, #1

5714A6 ..... **Per Set** $27.18

Magnetic Screwdriver Sets

7-Piece Slotted Set— Includes handle with six blades in sizes 0.025″, 0.040″, 0.055″, 0.070″, 0.080″, and 0.100″. Packed in a vinyl pouch.

8550A62 ..... **Per Set** $18.30

5-Piece Phillips Set— Includes handle with four blades in sizes #000, #00, #0, and #1. Packed in a vinyl pouch.

8550A63 ..... **Per Set** $21.50

6-Piece Slotted and Phillips Set— Packed in a vinyl pouch. Includes handle with the following blades:
Slotted: 0.055″, 0.070″, 0.100″
Phillips: #0, #1

8550A54 ..... **Per Set** $19.25

Nonmagnetic Screwdriver and Tool Sets

25-Piece Set— Includes 16 handles and blades, eight hex keys, and a tweezer:
Slotted Screwdrivers: 0.055″, 0.080″, 0.100″, 0.125″
Phillips Screwdrivers: #00, #0, #1
Nutdrivers: 5/64″, 3/32″, 7/64″, 1/8″, 5/32″
Hex-Key Drivers: 0.050″, 1/16″, 5/64″
Short-Arm Hex Keys: 1/16″, 5/64″, 3/32″, 1/8″, 5/32″, 3/16″, 7/32″, 1/4″
Awl: 5/64″ Dia.
Stainless Steel Tweezer: 3 9/16″ long with smooth tips

5821A46 ..... **Per Set** $77.86

28-Piece Set— Includes 27 handles and blades and an extension:
Slotted Screwdrivers: 0.025″, 0.040″, 0.055″, 0.070″, 0.080″, 0.100″
Phillips Screwdrivers: #0, #1
Nutdrivers: 5/64″, 3/32″, 7/64″, 1/8″, 5/32″
Hex-Key Drivers: 0.028″, 0.035″, 0.050″, 1/16″, 5/64″, 3/32″
Open-End Wrenches: 5/64″, 3/32″, 7/64″, 1/8″, 5/32″, 3/16″, 1/4″, 5/16″
Extension: 3″ long

5468A31 ..... **Per Set** $97.94

31-Piece Set— Includes three handles (one is smooth plastic and ESD static-dissipative), 27 blades, and an extension:
Slotted Screwdrivers: 0.055″, 0.070″, 0.080″, 0.100″
Phillips Screwdrivers: #00, #0, #1
Hex-Key Drivers: 0.028″, 0.035″, 0.050″, 1/16″, 5/64″, 3/32″
Star Drivers (fit Torx fasteners): T5, T6, T7, T9, TPT8, TPT10 (TPT = tamper resistant)
Nutdrivers: 7/64″, 1/8″, 5/32″
Open-End Wrenches: 7/64″, 1/8″, 5/32″, 3/16″
Awl: 5/64″ Dia.
Extension: 3″ long

5821A48 ..... **Per Set** $76.21

Japanese Industrial Standard (JIS) Screwdrivers

Miniature

Standard

Designed especially for the fasteners used in electronics assembly. The screwdriver tips have slightly sharper corners than Phillips tips, which have a more rounded shape. Blades are steel.

Miniature screwdrivers have knurled steel handles that are conductive; they can be used in situations where electrostatic discharge is a concern. All have a rotating cap. Apply pressure to the cap with your index finger or palm and turn the body of the tool for precision control. ***Warning:*** Since the handles are conductive, tools must not come in contact with sources of electrical power.

Standard screwdrivers have plastic handles.

Miniature Screwdrivers

Tip No.	Blade Lg.	O'all Lg.		Each
000	1 13/16″	4″	53325A11	$5.87

3-Piece Standard Screwdriver Set— Includes one each of the standard screwdrivers listed at left.

53325A61 ..... **Per Set** $28.92

Compact Screwdriver Set

With an overall length of 3 1/2″, the screwdrivers in this set fit into tight spaces. Handles are plastic; each handle is a unique color. Set comes with a large secondary handle that slips over the screwdriver handle to provide greater torque and a more comfortable grip.

Set also includes eight screwdrivers in the following sizes: 3/32″, 1/8″, 5/32″, 3/16″, and 1/4″ slotted; #0, #1, and #2 Phillips. Blades are alloy steel. Secondary handle is 3 1/8″ long. Packed in a clear plastic case.

7032A11 ..... **Per Set** $31.55

Plastic Handle Extra-Long Screwdrivers

The extra length of these tools makes them great for reaching hard-to-get-at fasteners. Blades are alloy steel; handles are plastic.

Convertible Handle Insulated Screwdriver Set

Convert to a precision screwdriver in seconds—just remove the screwdriver handle and replace it with the rotating cap. Screwdriver handle has a quick-release button for easy blade changes. The rotating cap is for precision control. Apply pressure to the cap with your index finger or palm and turn the body of the screwdriver. Overall length ranges from 7″ to 8 1/4″. All meet IEC 900 and VDE standards. Rated to 1,000 volts.

Set includes screwdriver handle, rotating cap, and 12 blades in the following sizes: 3/32″, 1/8″, 9/64″, 5/32″, 7/32″, and 1/4″ slotted; #1 and #2 Phillips; T10, T15, and T20 Torx; and #2 Pozidriv®. Packed in a metal case.

6095A11 ..... **Per Set** $52.84

How to Choose the Correct Phillips Screwdriver

First, measure the length of the recess on the fastener you wish to drive (see (A) at left). Then, use the charts at right to find which tip no. will fit best.

Tip No.	(A) minimum	(A) maximum
0	0.048″ (3/64″)	0.077″ (5/64″)
1	0.082″ (5/64″)	0.136″ (9/64″)
2	0.127″ (1/8″)	0.220″ (7/32″)

Tip No.	(A) minimum	(A) maximum
3	0.220″ (7/32″)	0.322″ (5/16″)
4	0.304″ (19/64″)	0.473″ (15/32″)

About Ultra-Grip Screwdrivers

Ultra-grip screwdriver handles have areas of hard and soft (multicomponent) plastic with a soft surface. This provides the best possible grip for achieving maximum torque with minimal effort. Handles have an ergonomic shape that offers comfort and reduces fatigue.

Blades are made of alloy steel for high strength and durability. They are coated to resist corrosion.

Ultra-Grip High-Voltage Insulated Screwdrivers

The blades are completely insulated with plastic and are tested to 1,000 volts. Screwdrivers meet EN 60900 and VDE standards, except 7020A24, which meets IEC 900 and VDE standards. The tip style is marked on each handle for easy identification.

Ultra-Grip Screwdrivers with Antislip Tips

Reduce cam-out, or slipping and stripping of the screw recess. The blade tips have ribbed grooves that dig into the screw recess when force is applied. This means less damage to the fastener recess and less pressure required to achieve maximum torque.

Slotted Narrow Round Blades—Have thin blades for limited clearance. Also known as cabinet or electricians' screwdrivers.

Hex Blades—The tip style is marked on each handle for easy identification. Screwdrivers have a hex shoulder to grip with a wrench for additional torque.

Ultra-Grip Static-Dissipative Screwdrivers

Conductive plastic handles prevent static buildup and protect sensitive electronic equipment from damage due to electrostatic discharge. For greater controlled release of static energy, use with a static control grounding strap; see 72555K on page 929. ***Warning:*** Since the handles are conductive, tools must not come in contact with sources of electrical power.

5720A82 ..... **Per Set** $69.35

Premium Plastic-Handle Screwdrivers

Deep flutes in the handles offer a secure grip, making this design the industry standard. Handles are made of plastic and are oversized for extra torque, although screwdrivers with ***slotted round blades with pocket clip*** have slim handles to fit in your pocket.

Blades and tips are alloy steel for high strength and heavy duty use.

Screwdrivers that have a hex shoulder can be gripped with a wrench for additional torque.

Slotted Extra Narrow Round and ***Slotted Narrow Round Blades***—Have thin blades for limited clearance. Also known as cabinet or electricians' screwdrivers.

5791A52 ..... **Per Set** $28.72

For information about choosing a Phillips screwdriver, see page 2832.

Ultra-Grip Steel-Head Screwdrivers

Steel end caps can take a hit; they resist impact and absorb the hammer blows needed in tough jobs. Blades extend through handle for added strength. All have a hex shoulder to grip with a wrench for increased torque. Handles have areas of hard and soft plastic with a soft surface (unless noted). This is the best grip for achieving maximum torque with minimal effort.

Ultra-Grip Stainless Steel Screwdrivers

You won't find rust or chips on Type 420 stainless steel blades. Their strength and rust resistance make them ideal for food-service areas and laboratories, as well as other medical and marine applications. Handles are plastic. Screwdrivers can be autoclaved up to 266°F.

Titanium Screwdrivers

Titanium has the strength of steel—yet it's approximately 50% lighter, virtually nonmagnetic, and highly corrosion resistant. It's used in the aircraft and medical industries. Blades are made of grade 6AL-4V titanium. Handles are plastic.

Magnetic Bit Offset Screwdriver

With a blade angle of 105°, this tool can be used as an offset screwdriver for tight spaces.

End is magnetic and accepts standard 1/4" hex-shank bits. Comes with 3/16" and 1/4" slotted bits, #1 and #2 Phillips bits, and a thumb flange for stability. Twist the handle and the bit rotates. Also works with 1/4" hex-shank power drills up to 1/4-hp, 125 in.-lbs. torque, 400-rpm capacity.

Head is die cast zinc; shank is cold-rolled steel. Handle is plastic and has bit storage. Overall length is 8 3/8".
5332A81 ..... **Each** $30.03

Offset Screwdrivers

A great choice when you're working in confined areas. All are made of steel.

A Screwdriver is zinc plated.

B Blades are slotted and made of square stock for extra heavy duty use.

C Screwdrivers have a reversible ratchet.

D Screwdrivers have a sure-grip, black polyamide handle.

5-Piece Set—Includes one each of Style B slotted offset screwdrivers (5708A1, 5708A2, 5708A3, 5708A4, and 5708A7). Packed in a vinyl pouch.
5708A9 ..... **Per Set** $40.78

One-Way Screw Removal Tools

One-way screws can be installed with a slotted screwdriver but can only be removed with either these hand tools or one-way screw drill bits (see 5713A on page 2825). Apply downward pressure on tool until its prongs dig into the screw. Then, rotate tool to extract the screw. Blades are carbide steel; handles are plastic.

One-way screw removal tools are for removal only. Screws that are corroded or were installed with power tools must be drilled out.

For Screw Size	For Screw Head Dia.	Blade Dia.	Blade Lg.	O'all Lg.		Each
4, 6, 8	0.193"-0.384"	5/16"	3½"	7⅛"	7392A52	$17.88

For information about choosing a Phillips screwdriver, see page 2832.

Flexible-Shaft Screwdrivers

Work around corners and in other spots that regular and offset screwdrivers can't reach. Tools have a flexible shaft, an alloy steel blade, and a plastic handle.

Blade Lg.	O'all Lg.		Each
3/16″ Slotted Blade			
4½″	7¼″	5705A1	$10.80
#1 Phillips Blade			
4½″	7⅛″	5705A2	10.80

Hollowed-Tip Screwdrivers

Often called hollow or parallel ground screwdrivers, these have tip faces designed to fill the screw slot better than the tapered tips found on most screwdrivers. More of the blade is in contact with the screw, so more torque is produced. Blades are slotted and made of alloy steel. Handles are plastic.

Tip Wd.	Tip Thick.	Blade Lg.	O'all Lg.		Each
⅛″	0.023″	4¼″	6⅝″	7297A11	$11.11

5/16″	3/16″	10½″	Yellow	5491T2	12.05
⅜″	3/16″	10½″	Blue	5491T3	12.33

■ Fully extended.

Insulated Screwdrivers for Terminal Screws

Also known as terminal screwdrivers, these tools are for use with combination drive screws in electrical equipment. Insulated to 1,000 volts and meet IEC 60900 and VDE standards. Blades are alloy steel. Handles have areas of hard and soft (multicomponent) plastic with a soft surface.

Tip Size	Blade Lg.	O'all Lg.		Each
#1	3⅛″	7½″	4245A11	$13.02
#2	4″	8¾″	4245A12	15.98

2-Piece Set—Includes one of each screwdriver above.

4245A16 ..... **Per Set** $27.95

Screwdriver and Solid-Shaft Nutdriver Sets

We've grouped 13 of the most common screwdriver and nutdriver sizes in these sets.

Standard Set—Blades are steel and 3⅝″ to 4″ long. Furnished with a 4″ long plastic drive handle. Includes #1 and #2 Phillips screwdriver blades; 3/16″ and ¼″ slotted screwdriver blades; and 3/16″, 7/32″, ¼″, 9/32″, 5/16″, 11/32″, ⅜″, 7/16″, and ½″ nutdriver sockets. Packed in a canvas roll-up pouch.

5404A1 ..... **Per Set** $82.81

ESD Static-Dissipative Set—Use on static-sensitive electronics and in areas where electrostatic discharge is a concern. Blades are hardened tool steel and 5 29/32″ long. Includes a 5 9/32″ long plastic drive handle; #0, #1, and #2 Phillips screwdriver blades; 3 mm, 4 mm, and 6 mm slotted screwdriver blades; and 3/16″, ¼″, 5/16″, 11/32″, ⅜″, 7/16″, and ½″ nutdriver sockets. Packed in a canvas roll-up pouch. ***Warning:*** The handles are conductive, so tools must not come in contact with sources of electrical power.

5587A16 ..... **Per Set** $81.05

Composite Solid-Shaft Nutdrivers

Lighten up with nutdrivers made entirely of composite materials. They're 50% lighter in weight than standard nutdrivers and are nonmagnetic, nonsparking, and corrosion resistant. They have one-piece solid-shaft construction and color-coded end caps on the handles for easy identification.

Size	Hex Dp.	O'all Lg.	End Cap Color		Each
3/16″	¼″	7½″	White	4860A22	$20.92
¼″	¼″	7½″	Red	4860A23	24.66
5/16″	¼″	7½″	Amber	4860A24	25.74
⅜″	¼″	7½″	Blue	4860A26	25.74
½″	3/16″	7½″	Orange	4860A28	24.70
9/16″	5/16″	7½″	Yellow	4860A29	24.66

Self-Adjusting Hollow-Shaft Nutdriver

With its six steel collet fingers, this nonmagnetic nutdriver automatically adjusts to fit hex nuts from ¼″ to 7/16″, hex-head screws from #6 to ¼″, and socket-head cap screws from #8 to 5/16″. Push the sleeve down to open the jaws and engage your fastener. Shaft is steel. Shaft depth is 3″. Handle is black plastic. O'all length is 7″.

7384A44 ..... **Each** $36.21

Ratcheting Solid-Shaft Nutdriver Set

You'll get a handle with three ratchet positions (left, right, and lock) for easier driving and seven interchangeable nutdriver shafts in sizes 3/16″, ¼″, 5/16″, 11/32″, ⅜″, 7/16″, and ½″. Handle is plastic with a cushion grip and is 3¼″ long. Shafts are color coded and made of alloy steel. Hex depth is ¼″. Overall length (handle with shaft) is 6½″. Packed in a plastic case.

7965A1 ..... **Per Set** $52.60

Precision Solid-Shaft Nutdrivers

Precision driving at your fingertips. Apply pressure to the rotating end cap with your index finger or palm and turn the body of the nutdriver. Great for use with electronics, precision components, and small-parts assembly. Shafts are steel. Handles are tapered.

Standard—Handles are red and black plastic.

ESD Static-Dissipative—For use where electrostatic discharge is a concern. Handles are conductive and are made of green and black plastic. ***Warning:*** The handles are conductive, so tools must not come in contact with sources of electrical power.

52965A28 ..... **Per Set** $50.60

About Hex Nutdrivers

All nutdrivers are for use with hex head bolts, screws, and nuts. Some handles are color coded for easier size identification. ***Magnetic*** nutdrivers firmly hold your hex head bolts, screws, or nuts during driving.

Solid-Shaft Nutdrivers—The shaft is solid, while the tip is drilled. A good choice when you don't need extra clearance for long bolts.

Hollow-Shaft Nutdrivers—The entire shaft is hollow to provide the clearance necessary to remove nuts from long bolts.

Solid Shaft

Hollow Shaft

Hex L-Key Sets

Vinyl Pouch

Plastic Indexed Caddy

Plastic Indexed Ring

Metal Box with Stand

Vinyl Partitioned Roll-Up Pouch

Metal Partitioned Box

Metal Box

A variety of sets allows you to choose the hex L-key sizes you need in the container you prefer. Hex size is measured across parallel flats. All keys are made of alloy steel with either a black-oxide, ultra-coated silver, or high-visibility blue finish.

Ultra-coated silver sets have a highly corrosion-resistant silver coating that resists more than 600 hours of salt-spray exposure by ASTM B117 testing standards.

High-visibility blue sets have a blue coating to make the L-keys easy to identify.

For ball-point hex keys, see pages 2844-2847.

Stainless Steel Hex L-Keys

Stainless steel provides excellent resistance to corrosion resulting from humidity, food acids, and salts. Made of Type 416 heat-treated stainless steel, unless noted. Hex keys can be autoclaved up to 221°F.

Also Available: Individual keys in metric sizes 2, 2.5, 3, 4, 5, 6, 7, 8, and 10 mm. Please ask for 53855A888 and specify hex size.

Flexible Hex Drivers

Easily start and remove hex socket head screws in hard-to-reach areas. A flexible spring connects the long arm of a hex L-key to a short, straight hex key. Use the L-key to loosen and tighten; use the short, straight end for fast spinning. Made of steel.

Hex Size	O'all Lg.		Each

7-Piece Set—Includes one of each size driver listed at left. Packed in a plastic pouch.

7153A11 ..... **Per Set** $57.69

Ultra-Gold Hex L-Keys

Go for the gold. An extra-strong, flexible gold finish provides keys with good corrosion resistance. The finish won't flake or peel when keys are twisted or torqued—ideal for use in food applications and electronics assembly. Dirt and grime can't hide on these keys, and the gold color makes them easy to identify. Made of extra-strong steel for up to 20% more torque than ordinary steel.

High-Torque Hex L-Keys

A larger contact surface along the edges allows you to achieve 20% more torque than with standard hex keys, which grip only with their pointed edges.

Also known as hex-plus L-keys, high-torque L-keys have a unique profile that distributes pressure on the flat sides of fasteners. Made of alloy steel with a black-oxide finish.

Hex L-Keys and Hex Drivers for Tamper-Resistant Screws

Specially designed ends remove tamper-resistant pin-in-socket screws, which can't be removed with conventional hex keys.

L-keys are alloy steel with a black-oxide finish. They have a tamper-resistant design on both ends, unless noted. ***Drivers*** have a plastic handle and an aluminum shaft with an alloy steel tip.

For tamper-resistant hex insert bits, see page 2821. For pin-in-socket screws, see page 3132.

♦ Tamper-resistant hex on one end, standard hex on the other end.

4-Piece L-Key Set—Includes sizes 1/8″, 5/32″, 3/16″, and 7/32″. Packed in a vinyl pouch.

7390A45 ..... **Per Set** $15.62

6-Piece Magnetic Driver and Bit Set—Has a 9″ long magnetic driver with a hardened tool steel shaft; a magnet in the shank holds pin-in-socket hex insert bits in place. Comes with 1/4″ hex-shank pin-in-socket hex insert bits in 3/32″, 1/8″, 5/32″, 3/16″, and 7/32″ sizes. Made of plastic, handle has an ergonomic design and stores bits.

7253A53 ..... **Per Set** $30.77

L-Key Holders

Keep your regular hex, ball-point, spline, and Torx L-keys organized. Sizes are marked on holders for easy identification. All holders are plastic.

Styles A&B—Insert keys and twist to lock them in place; keys won't fall out of these caddies. ***Style C***—The rings have springs to hold keys in place. ***Style D***—Holder is freestanding and can be wall mounted.

Large-Grip T-Handle Hex Keys

Oversized molded plastic handles deliver extra torque while providing a sure grip. Blades are alloy steel with a black-oxide finish; they are nonreplaceable.

Smooth-grip T-handle hex keys have a comfortable grip and are easy to clean.

Textured-grip T-handle hex keys offer superior slip-resistance, even when tools are wet or oily.

Also Available: Individual keys with textured grip in metric sizes 2, 2.5, 3, 4, 5, 6, 8, and 10 mm. Please ask for 4973A888 and specify hex size and 6″ or 9″ blade length.

High-Torque T-Handle Hex Keys

Also known as hex-plus keys, high-torque keys have a larger contact surface along their edges to deliver up to 20% more torque than standard keys, which grip only with their pointed edges. The unique profile distributes pressure on the flat sides of fasteners. Blades are alloy steel and nonreplaceable. Handles are plastic.

Extra-Long T-Handle Hex Keys with Replaceable Bits

Install and remove socket-head hex screws that are beyond the reach of standard-length hex keys. A set screw locks the bit firmly in place. Bits are replaceable. Handles are plastic with a cushion grip for added comfort. Shanks and bits are made of alloy steel; shanks are zinc plated.

Note: A hex L-key (not included) is required to tighten and loosen the set screw when you replace the bit; refer to the set screw hex key size column below for the correct hex key size needed. Replacement bits listed are compatible with any length driver listed on the same line as the bit.

10-Piece Inch Set— Includes one each of the inch hex key sizes above. Blades are 4 1/2″ long. Packed in a metal stand.

7041A31 ..... **Per Set** $40.46

6-Piece Metric Set— Includes one each of the metric hex keys above.

7041A39 ..... **Per Set** $22.06

Hex Drivers with Replaceable Blades

Get a grip on smaller-sized hex keys. Handles are plastic and 4″ long (unless noted). Blades are made of alloy steel and are replaceable. A set screw holds the blade in place. ***Drivers*** include handle, hex blade, and L-key for the set screw. ***Replacement blades*** are compatible only with a driver of the same hex size.

Hex Size	Blade Lg.	Drivers	Each	Replacement Blades	Each
0.028″	2″	7160A11★	$6.72	7160A23	$0.61

6-Piece Inch Set—Includes sizes 0.050″, 1/16″, 5/64″, 3/32″, ⅛″, and 5/32″. Set has Style A handle. Packed in a vinyl pouch.
7400A36 ..... **Per Set** $32.71

11-Piece Inch Set—Includes one of each inch hex driver listed above, plus 7/32″ and ¼″ hex sizes. Set has Style B handle. Packed in a canvas roll-up case.
7400A33 ..... **Per Set** $60.63

8-Piece Metric Set—Includes sizes 1.27, 1.5, 2, 2.5, 3, 4, 5, and 6 mm. Set has Style B handle. Packed in a canvas roll-up case.
57585A61 ..... **Per Set** $57.04

Miniature Hex Drivers

Drivers have a rotating cap for precision control. Just apply pressure to the cap with your index finger or palm and turn the body of the driver. Great for small-parts assembly and repair.

Plastic Handle

Made of plastic, handles are molded to hardened-steel blades and have a comfortable grip.

Hex Size Inches	Hex Size mm	O'all Lg.		Each

7270A59 ..... **Per Set** $26.02

7-Piece Metric Set—Includes one each of metric sizes above.
52975A21 ..... **Per Set** $23.57

Steel Handle

Drivers have a knurled steel handle. Blades are hardened, tempered chrome-vanadium steel; they are interchangeable—different sizes fit the same handle. Handles are conductive and can be used in situations where electrostatic discharge is a concern. ***Warning:*** The handles are conductive, so tools must not come into contact with sources of electrical power.

Also Available: Replacement blades. Please ask for 7043A55 and specify hex blade size.

6-Piece Metric Set—Includes sizes 0.7, 0.9, 1.3, 1.5, 2, and 2.5 mm. Packed in a vinyl pouch.
7043A19 ..... **Per Set** $28.62

Hex Driver Sets

Blades are carbon steel, and handles are plastic. Packed in a plastic case.

Compact Hex Driver Sets—With an overall length of 3½″, the drivers are short enough to fit into tight spaces. Sets include eight complete drivers and a large secondary handle (3⅛″ long) that slips over the driver handle to provide greater torque and a more comfortable grip.

Compact Hex Driver Set

Interchangeable Blade Hex Driver Sets—Include one handle with interchangeable hex blades. Handle and blades are each 4″ long.

Compact Hex Driver Sets

9-Piece Inch Set—Includes secondary handle and hex drivers in sizes 0.028″, 0.035″, 0.050″, 1/16″, 5/64″, 3/32″, 7/64″, and ⅛″.
5759A12 ..... **Per Set** $28.51

9-Piece Metric Set—Includes secondary handle and hex drivers in sizes 0.89, 1.27, 1.5, 2, 2.5, 3, 4, and 5 mm.
5759A13 ..... **Per Set** $32.21

Interchangeable Blade Hex Driver Sets

11-Piece Inch Set—Includes handle, 4″ extension, and hex blades in sizes 0.050″, 1/16″, 5/64″, 3/32″, 7/64″, ⅛″, 9/64″, 5/32″, and 3/16″.
5548A11 ..... **Per Set** $48.96

9-Piece Metric Set—Includes handle, 4″ extension, and hex blades in sizes 1.27, 1.5, 2, 2.5, 3, 4, and 5 mm.
5537A11 ..... **Per Set** $48.29

Fold-Up Hex Key Sets

Keep the most popular hex key sizes close at hand. Keys fold out for easy access. All blades are alloy steel. ***High-visibility sets*** have brightly colored handles that are easy to identify.

(D) Standard Fold-Up Sets—Handles are alloy steel. Blades open up to 180°. **Also Available:** Inch replacement keys (except high-visibility handles). Please ask for 7162A75 and specify hex key size and set part number.

(E&F) "Z" Fold-Up Sets—The "Z" design lets you select any key without unfolding the others in the set. Blades open up to 270°. *Style E* sets have an alloy steel handle. *Style F* set has a glass-filled nylon handle.

(G) Ultra-Grip Fold-Up Sets—Handle is two-component plastic with a hard inner body for maximum strength. The handle has a soft cushion grip for comfort and slip resistance. Blades open up to 180°.

Ball-Point Hex L-Key Sets

L-Key Set in Plastic Indexed Caddy

Stubby L-Key Set in Plastic Indexed Caddy

L-Key Set in Metal Indexed Box

You don't need exact alignment between the hex socket fastener and the tool—keys have a ball-point end that allows an angled entry of up to 25°. This allows you to quickly tighten and remove screws in hard-to-reach areas. The short arm has a standard hex end; the long arm has a ball-point end. *Stubby* sets have a short arm that is 70% shorter than standard hex keys to eliminate the need to cut off the arm to shorten the key.

Keys are made of alloy steel with either a black-oxide, ultra-coated silver, or high-visibility blue finish. ***Ultra-coated silver*** sets have a highly corrosion-resistant silver coating that resists more than 600 hours of salt-spray exposure by ASTM B117 testing standards. ***High-visibility blue*** sets have a blue coating to make keys easy to identify.

Ball-Point Hex L-Key Boxed Set

All of the L-keys in this 200-piece set allow an angled entry up to 25°. Because the ball-point end doesn't require exact alignment between the fastener and the tool, you can use the keys in limited space areas. Made of alloy steel with a black-oxide finish. Comes in four plastic snap boxes that fit into a four-shelf plastic storage unit.

Ball-Point Hex L-Keys

Save time tightening hex socket fasteners with these ball-point keys. The ball-point end can access fasteners at angles up to 25°, so exact alignment between the fastener and the tool is not required. Made of high strength tool steel with a black, corrosion-resistant finish.

High-Torque Ball-Point Hex L-Keys

Also known as hex-plus keys, tools have a ball-point end and a hex end with a profile that provides greater contact with the flat sides of fasteners. This delivers up to 20% more torque than standard keys, which grip only with their pointed edges. Made of alloy steel with a black-oxide finish.

Stainless Steel Ball-Point Hex L-Keys

Ideal for sterile and clean room environments, keys can be autoclaved up to 600° F and don't have any coatings to peel or chip. Made of hardened and passivated Type 465 stainless steel for excellent corrosion resistance. Ball-point end does not require exact alignment into fastener; it allows for angled entry up to 25°.

Ball-Point Hex Blades and Drivers

A ball-point end on these tools allows an angled entry of up to 25°. Exact alignment between the fastener and tool is not required, so you can quickly tighten and remove screws in hard-to-reach areas. Blades are alloy steel with black-oxide finish.

Blades— Can be cut down and/or welded onto another tool to make a customized driver. You can use larger-size blades with socket wrenches and power tools for additional reach. ***Snap-In Blade Sets—*** Include a plastic handle and interchangeable blades. Sets are not compatible with individual blades below. ***Drivers and Driver Sets—*** Drivers have a plastic handle with cushioned rubber grip. Inch-size handles are yellow; metric-size are red.

Ultra-Gold Ball-Point Hex L-Keys and Drivers

L-Key

Driver

A strong, flexible gold finish gives these hex L-keys and drivers good corrosion resistance. The finish won't flake or peel when the tools are twisted or torqued—ideal for use in food applications and electronics assembly. Dirt and grime can't hide on the tools and the gold color makes them easy to identify. The ball-point end does not require exact alignment into the fastener; it allows for angled entry up to 25°. Made of extra-strong steel for up to 20% more torque than ordinary steel.

7996A92 ..... **Per Set** $56.47

Two-Tip T-Handle Ball-Point Hex Keys

Use the straight hex end on the short blade for increased torque and power. Use the ball-point hex end on the long blade for angled entry up to 25°; the ball-point end doesn't require exact alignment between the fastener and the tool. Handle is two-component plastic and rubber to offer a firm, comfortable grip. Blades are chrome-plated steel.

Fold-Up Ball-Point Hex Key Sets

A

B

C

Keys have ball-point ends that can enter socket-head screws at angles up to 25°. Blades are alloy steel and open to 180°.

(A) Standard Fold-Up Sets—Have slim alloy-steel handles.

(B) Ultra-Grip Fold-Up Sets—The two-component glass-reinforced nylon handle has a hard inner body for maximum strength and stability. A soft cushioned grip provides comfort and slip resistance.

(C) Screw-Holding Tip "Z" Fold-Up Sets—A steel retaining ring around the ball-point end of the hex key firmly holds socket head screws during installation and removal. Handle is molded plastic for a sure grip. *Note:* Sizes indicated with a ♣ do not have a retaining ring.

Ball-Point Hex L-Keys, Drivers, and T-Handles with Screw-Holding Tips

A steel retaining ring around the ball-point end of the tools holds hex socket head screws firmly in place during installation and removal. The ball-point end allows up to a 25° angled entry into the fastener, making tools ideal for hard-to-access areas. Blades are alloy steel.

L-Keys and Drivers

Drivers have two-component plastic and rubber handles with a comfortable cushion grip for achieving maximum torque. Inch-size handles are black and yellow; metric-size handles are black and red.

Miniature Ball-Point Hex Drivers

A rotating cap on the handle offers precision control. Just apply pressure to the cap with your index finger or palm and turn the body of the driver. The precision-ground ball-point end allows up to a 25° angled entry into the fastener. Blades are hardened alloy steel. Handles are plastic; they're tapered and molded to the blade.

Also Available: Individual drivers in metric sizes 1.5, 2, 2.5, and 3 mm. Please ask for 55035A888 and specify hex size.

5756A92 ..... **Per Set** $32.21

6-Piece Driver Set—Includes sizes T10, T15, T20, T25, T27, and T30. Packed in a vinyl pouch.

5756A45 ..... **Per Set** $33.62

10-Piece Driver Set—Includes sizes T6, T7, T8, T9, T10, T15, T20, T25, T27, and T30. Packed in a vinyl pouch.

5756A91 ..... **Per Set** $57.89

Magnetic Driver and Torx Bit Set

Here's an easier way to drive Torx screws. A magnet is built into the driver's steel shank to hold bits securely. Plus, you can store the bits right in the handle. Handle is plastic and has an ergonomic design for fatigue-free driving. This 7-piece set includes driver and 1/4″ hex-shank Torx bits in sizes T10, T15, T20, T25, T30, and T40. Driver has a 4 3/4″ long blade; overall length is 9 1/8″.

Note: Also compatible with Torx-Plus screws, but will not give Torx-Plus performance.

5379A82 ..... **Per Set** $26.44

Ultra-Gold Torx L-Key Sets

You won't have to search for these keys—their gold finish makes them easy to identify. Made of steel, these keys are an extra strong version of our standard Torx L-keys. The gold finish provides good corrosion resistance. Lengths range from 2 7/64″ to 3 13/16″ for 6370A1; 2 29/32″ to 4 29/32″ for 6370A2. These eight-piece sets are packed in a plastic caddy. *Note:* Also compatible with Torx-Plus screws, but will not give Torx-Plus performance.

Torx Sizes		Per Set
T6, T7, T8, T9, T10, T15, T20, T25	6370A1	$18.71
T9, T10, T15, T20, T25, T27, T30, T40	6370A2	19.04

Fold-Up Torx-Key Sets

You'll get a variety of Torx key sizes in one tool. Blades are steel and can be used at any angle. They open up to 180°.

A ***Standard Fold-Up Sets***—Handles are steel.

B ***Ultra-Grip Fold-Up Set***—Set has a two-component plastic handle with a hard inner body for maximum strength and a soft cushion grip for comfort and slip resistance.

C ***Tamper-Resistant Ultra-Grip Fold-Up Set***—Same as Style B, except for use with tamper-resistant Torx screws.

	Torx Sizes	Handle Lg.		Each

Miniature Precision Torx Drivers

Use these drivers with electronics and precision components and for small parts assembly. All have a tapered plastic handle and an ergonomic design for a comfortable grip. A rotating top on the handle enhances fingertip control for precise turning. Blades are steel and molded to the handle. *Note:* Also compatible with Torx-Plus screws, but will not give Torx-Plus performance.

Torx-Plus L-Keys and Drivers

Exclusively for use with Torx-Plus screws, these keys and drivers deliver up to 100% longer life and 25% better torsional strength than standard Torx tools. They also have less cam-out (slippage that can damage the screw). Blades are steel. ***Drivers*** have a cushion grip for comfort. *Note:* These tools won't work with standard Torx screws.

6103A41 ..... **Per Set** $36.40

Fingertip T-Handle Torx Drivers with Screw-Holding Tips

Screw-Holding Tip

A rotary spring on the tip of these drivers holds the screw in place while it turns. Drivers have a plastic T-handle molded onto the blade. A rotating top on the handle enhances fingertip control for precise turning. Spring is made of steel. Blades are steel with a black finish.

Note: Also compatible with Torx-Plus screws, but will not give Torx-Plus performance.

Torx L-Keys with Screw-Holding Tips

Screw-Holding Tip

L-keys with a difference—the long arm of these keys has a rotary spring tip. The spring holds the screw in place while it turns. Spring is made of stainless steel. Blades are hardened steel.

Note: Also compatible with Torx-Plus screws, but will not give Torx-Plus performance.

Torx Size	O'all Lg.		Each
T6	3 3/16″	7943A11	$3.71

7-Piece Set—Includes sizes T6, T7, T8, T9, T10, T15, and T20. Furnished in a plastic caddy.

7904A23 ..... **Per Set** $22.86

10-Piece Set—Includes sizes T6, T7, T8, T9, T10, T15, T20, T25, T27, and T30. Furnished in a plastic caddy.

7904A24 ..... **Per Set** $35.47

Flexible-Leg Tripod

Stand this tripod on its own three feet, or wrap the legs around almost anything. Legs are made of 1 1/8″ dia. plastic sections that have ball-and-socket joints, allowing the legs to flex and move. The feet and the rings around each section are rubber to prevent slipping. Color is black and gray.

Tripod has a 1 3/4″ dia. head with a 1/4″-20 threaded mounting stud. Comes with a 3/8″-16 male adapter.

Max. Proj.	Load Cap., lbs.		Each
9 13/16″	6.6	1050A1	$49.74

Two-Tip T-Handle Torx Drivers

Use the short blade on these drivers for added torque; use the long blade for hard-to-reach screws. The T-handle is made of two-component plastic and rubber to provide a firm, comfortable grip. Blades are chrome-plated steel. *Note:* Also compatible with Torx-Plus screws, but will not give Torx-Plus performance.

Torx Size	Length: Short Blade	Long Blade		Each
T10	1/2″	4″	6186A61	$5.76
T15	1/2″	4″	6186A62	6.34

T25	19/32″	6″	6186A64	7.52
T27	19/32″	6″	6186A65	8.45
T30	43/64″	6″	6186A66	8.51
T40	43/64″	6″	6186A67	9.28

7-Piece Set—Includes one of each driver above.

6186A72 ..... **Per Set** $52.48

Magnetic Torx Driver Set

A magnet is built into the shaft of this driver to hold bits securely. Handle is made of polypropylene with an ergonomic cushion grip. Bits store in the handle; flip open the storage compartment for quick and easy access. The extended blade provides access to hard-to-reach Torx screws. Blade is steel.

Set includes a driver handle and 1/4″ hex-shank bits in sizes T8, T10, T15, T20, T25, T27, T30, and T40. Handle is 4 5/8″ long. Shaft is 5″ long. *Note:* Also compatible with Torx-Plus screws.

6194A27 ..... **Per Set** $31.88

Adjustable Blade Length Tamper-Resistant Torx Driver Set

Blade Detents

The blades for this driver have detents, so you can adjust their length from 4 5/64″ to 3 1/2″. Use to install and remove tamper-resistant pin-in-head Torx screws. To adjust the blade, press down on the handle's collar and manually adjust the blade's length. Release the collar and a spring-loaded ball bearing mechanism locks the blade in place. A shorter blade delivers greater torque; a longer blade reaches difficult-to-access screws. Handle has a cushioned rubber grip. Blades are steel.

Set includes a driver handle and five double-ended blades for a total of 10 blade sizes: T6, T7, T8, T9, T10, T15, T20, T25, T30, and T40. Furnished with a blade holder and a canvas pouch.

Note: Also compatible with Torx-Plus screws, but will not give Torx-Plus performance.

2257A5 ..... **Per Set** $56.50

Fingertip Flag-Handle Torx-Plus Drivers

Use these flag-handle drivers exclusively on Torx-Plus screws. Drivers offer fingertip control, so they're ideal for delicate assembly and electronics work. The flag-handle design makes work in tight spaces easier. Drivers deliver up to 100% longer life and 25% better torsional strength than standard Torx tools. They also have less cam-out (slippage that can damage the screw). Handles are rubber. Blades are steel.

Note: These drivers won't work with standard Torx screws.

Torx-Plus Size	Blade Lg.	O'all Lg.		Each

7974A28 ..... **Per Set** $19.82

Screw Extractors

Extractors have a spiral flute; use them to remove broken screws, bolts, studs, pipe, and other threaded parts. Drill a hole in the broken part, place the extractor in the hole, and turn it with a standard wrench or a tap wrench. The broken part will back out without damaging the threads. Use on right-hand threads. Made of steel.

27475A16 ..... $6.18

Heavy Duty Screw Extractors

Extra deep edges equal strong gripping with reduced expansion and jamming. All four sides of these heavy duty, spiral-flute extractors bite into the broken part of the pipe or fastener at the same time. Insert the extractor into the broken pipe or into a hole drilled in a screw, bolt, or stud. Turn the extractor with a wrench and the broken part will turn out on its own threads. Use on right-hand threads. Made of steel.

Also Available: Extractors for left-hand threads. Please ask for 2566A51 and specify trade number.

Screw Extractors for Hard-to-Reach Areas

The spiral flute and short, stocky design provides an aggressive grip for high-torque applications. Drill a hole in the broken screw, bolt, or stud; insert the extractor; and turn it with a wrench. Also good for removing pipe, fittings, and other hollow tubular-shaped items. Use on right-hand threads. Made of steel.

All-in-One Screw Extractors

Double Ended

Single Ended

Drill and remove broken screws, bolts, and studs with a single tool. The seven-flute extracting edge bites into the broken fastener. Use on right-hand threads. Made of steel.

Double Ended— One end drills the hole and the other end extracts the bolt. Use with a 1/8" variable-speed reversible power drill, unless noted.

Single Ended— Both the drill and the extractor are on one end. After drilling, screw the extractor to the top of the drill bit, then extract the bolt. Use with a 3/8" variable-speed reversible power drill.

For Screw, Bolt, and Stud Dia.

1/2" (12 mm)	53405A49	21.00

▲Use with a 3/8" variable-speed reversible power drill.

4-Piece Double-Ended Extractor Set— Includes four extractors (not listed) for removing screw/bolt sizes #4 to 3/8". Use with a 3/8" and larger variable-speed reversible power drill.

5997A6 ..... $32.36

7-Piece Double- and Single-Ended Extractor Set— Includes one each of the extractors listed.

53405A39 ..... $74.67

One-Step Socket-Drive Bolt Extractor Sets

Ratchet Drive

Power Drive

The spiral-fluted socket grips a bolt or stud and then tightens as it's turned. No drilling required. Use on right-hand and left-hand threads. Made of steel.

Ratchet Drive— Turn extractors with a square-drive ratchet or impact wrench, or use a flat wrench on the 3/8" and 1/2" drive sizes.

Power Drive— Turn extractors with power tools that accept a 1/4" hex shank.

Drive Size	No. of Pieces	Dia. Range		
Ratchet Drive				
1/4"	16	1/4"-3/8" and 6-10 mm	6792A14	$127.50
3/8"	13	1/4"-3/4"	6792A13	126.98
3/8"	9	8-19 mm	6792A12	88.54
1/2"	5	3/4"-1"	6792A11	87.80
Power Drive				
1/4" hex shank	7	3/16"-1/2" and 10 mm	6792A15	42.40

One-Step Knurl-Grip Stud Extractors

Use a standard 1/2" square-drive ratchet wrench to tighten the knurled wheel on this extractor; as you tighten the wheel, its grip on studs and bolt ends becomes stronger. No drilling required. Removes 1/4" to 3/4" size studs. Use on right-hand and left-hand threads. Made of steel.

2537A11 ..... $39.49

One-Step Socket-Screw Extractor Sets

Extract all types of socket-head screws that have rounded or damaged recesses. No drilling required: drive the extractor into the socket-screw recess with a hammer and use a wrench to twist it out. Use on right-hand and left-hand threads. Made of steel. Packed in a vinyl pouch.

Also Available: Individual extractors. Please ask for 2643A11 and specify screw type and size.

About Nonsparking Metal Tools

Made from aluminum bronze, beryllium copper, and other copper-based alloys (such as bronze and nickel copper) that are Factory Mutual approved, these nonmagnetic, corrosion-resistant tools inhibit sparking. They satisfy OSHA requirements that specify nonsparking tools for locations where flammable vapors and combustible residues are present. Iron or steel tools could produce sparks and be an ignition source. Nonsparking tools are not, however, classified as antistatic because they do conduct electricity.

Note: Do not use these tools in direct contact with acetylene due to the possible risk of explosion.

Aluminum Bronze—Has high strength for impact and torque applications. Most tools are beryllium free.

Beryllium Copper—With maximum strength for impact and torque applications, it's the most desirable material for tools with cutting edges or gripping teeth. This alloy contains approximately 2% beryllium.

Adjustable and Pipe Wrenches

A **B** **C**

Style A are made of aluminum bronze.

Style B have a beryllium copper jaw insert and aluminum bronze hook.

Style C are made of aluminum bronze. Also known as engineers' and railroad wrenches.

16-Piece Set— Includes a slotted screwdriver (5/16″ × 6″ blade); Phillips screwdriver (#2 × 4″ blade); 6½″ and 8″ combination pliers; 10″ tongue-and-groove pliers; 10″ adjustable wrench; 14″ pipe wrench; 12-point box wrenches in sizes 5/16″ × 3/8″, 7/16″ × ½″, 9/16″ × 5/8″, and ¾″ × 7/8″; 1¼″ putty knife; paring knife (3⅛″ wide blade); 14″ long, 1-lb. claw hammer; 10″ shoe handle brush; and 12″ long deck scraper. Brush is made of phosphorus bronze, and knives are made of nickel copper. Packed in a heavy duty plastic box.

6534A2 ..... $834.47

About Dead Blow Hammers and Sledges

You don't need a big swing to produce a powerful striking force—dead blow hammers and sledges have heads loaded with metal shot or sand to add weight for controlled impact with minimal rebound. The shot also ensures that the striking force is transmitted solidly, reducing worker fatigue and injuries. Dead blow hammers and sledges (except for ball peen) are nonmarring.

Dead Blow Hammers and Sledges

Standard

Slimline

Faces are soft to absorb impact, reduce noise, and prevent marring of the work surface. Handle has a textured grip and is nonreplaceable. ***High-visibility polyurethane*** hammers and sledges are bright safety orange, so they're easy to spot. All have a steel-reinforced handle and are fully encased in polyurethane. ***Black PVC*** hammers have a steel-reinforced handle and are fully encased in PVC.

Urethane Replaceable-Face Dead Blow Hammers and Sledges

Hammer

Sledge

Screw-on urethane faces absorb impact without marring or deforming your work surface. Faces resist cracking and are impervious to oils and solvents. Head is loaded with iron shot. Complete hammers and sledges include a lightweight aluminum or iron head, a replaceable hickory handle (see pg. 2866 for replacement handles), and two replaceable faces: medium (green) on one end; extra-hard (black) on the other.

To Order: For replacement faces, please specify soft (burnt orange), medium (green), hard (red), or extra hard (black). *Note:* For information about face hardness, see page 2858.

Hard Nylon Dead Blow Hammers

Made of nylon, the head is encapsulated in PVC for durability; it will not chip or "mushroom" when striking. The PVC casing also minimizes bounce. Head is loaded with steel shot. Faces are hard. The handle is made of fiberglass to withstand impact. It has a safety grip (unless noted) and is nonreplaceable.

★ Smooth grip. ■ One face is steel. ▲ One face is brass.

High-Visibility Polyurethane Dead Blow Ball Peen Hammers

You won't overlook these ball peen hammers—they have a bright orange polyurethane body. The peen end and striking face are alloy steel. Head is loaded with steel shot. The ball peen design handles any job from light duty tapping to heavy duty forming. Use for striking chisels and punches, as well as for setting rivets. The peen end is especially good for forming unhardened metal. The striking face is slightly rounded with beveled edges. Handle is made of steel-reinforced polyurethane; it has a textured grip and is nonreplaceable.

High-Visibility Polyurethane Replaceable-Face Dead Blow Hammers

Head and handle are one-piece molded polyurethane with a bright orange color for high visibility. Head is loaded with steel shot. Faces screw on to the head and are made of polyurethane to absorb impact, resist oils and solvents, and protect your work surface from marring. Complete hammers include a medium hard (red) face on one end, an extra hard (black) face on the other end, and a steel-reinforced polyurethane handle. Handle has a textured grip and is nonreplaceable.

To Order: For replacement faces, please specify extra soft (clear), soft (blue), medium (green), medium hard (red), hard (amber), or extra hard (black). *Note:* For information about face hardness, see page 2858.

♣ Has NPT threads. ● Also known as a sledge.

Hard UHMW Polyethylene Replaceable-Face Dead Blow Hammers

Faces screw on to the hammer head and are made of ultra-high molecular weight (UHMW) polyethylene, which resists abrasion, cracking, and chipping. Handle and head are one-piece aluminum alloy to provide high strength, durability, and perfect balance. Head is loaded with steel shot. Handle has a ribbed grip and is nonreplaceable.

About Replaceable Plastic Hammer Faces

Replaceable plastic faces range in hardness from extra soft to extra hard. Use the diagram below to determine which hardness is best for your application. *Note:* The color indicating a plastic's grade is not standardized and may vary among manufacturers.

Create-Your-Own Replaceable-Face Hammers, Sledges, and Dead Blows

Hammer with Textured Handle Grip (Shown with Faces, Sold Separately)

Hammer with Safety Handle Grip (Shown with Faces, Sold Separately)

Unassembled (Faces Sold Separately)

Design the perfect striking tool. The bodies and faces are sold separately, so you can customize a hammer, sledge, or dead blow to fit your needs.

Hammer and Sledge Bodies (Without Faces)— Consist of a hammer head and a nonreplaceable solid fiberglass handle for optimal strength. Head is glass-filled nylon to eliminate metal contamination as well as scratching and marring caused by metal-to-metal contact. *Safety handle grip* is ribbed to prevent your hand from slipping.

Dead Blow Hammer and Dead Blow Sledge Bodies (Without Faces)— Consist of a hammer head loaded with steel shot and a nonreplaceable reinforced-fiberglass handle. *PVC head* eliminates metal contamination as well as scratching and marring caused by metal-to-metal contact.

Faces— Screw on to the head. *Plastic* faces are tough, nonmarring PVC. *Brass* faces are medium hard and nonsparking. *Steel* faces are hardened for extra durability.

Create-Your-Own Replaceable-Face Split-Head Hammers

Hammer Body (Shown with Faces, Sold Separately)

Unassembled (Faces Sold Separately)

It's faster and easier to change the faces on these split-head hammers than on press-fit style hammers. Just loosen the nut under the head, remove the face, insert the new face, and tighten the nut. The hammer bodies and faces are sold separately, so you can create a custom hammer for your application.

Bodies consist of a two-piece malleable iron hammer head, a nut to secure the assembly, and a replaceable hickory handle. ***Faces*** are available in your choice of materials. *Lead* consists of 94% lead and 6% antimony. *Rawhide* provides soft blows—great for assembly work. *Copper* allows high-impact blows but is soft enough not to damage precision parts. *Hard nitrile rubber* is green and is similar in hardness to a bowling ball. *Hard plastic* is made of yellow ultra-high molecular weight (UHMW) polyethylene and is similar in hardness to a hard hat.

Also Available: Replacement handles. Please ask for 5911A61 and specify the McMaster-Carr body part number.

Air-Powered Replaceable-Face Hammers

Palm-sized tools fit into tight spaces where swinging a hammer is not possible. They can deliver a single blow or up to 1,000 blows per minute. Both have a 1/4″ NPT female air inlet and require compressed air at 60-125 psi, depending on force of impact required. Faces are 1 1/2″ dia. and are replaceable. Hammers are 3 1/2″ high and weigh 2 lbs.

Leather tool cover provides a comfortable grip and muffles sound. ***Maintenance/repair kit*** has six O-rings and a 0.05-oz. tube of lubricant.

Hard Nylon Replaceable-Face Hammers

Made of nylon, the faces on these hammers resist chemicals and abrasion and won't mark your work. Faces screw on to the head. They're off-white and are similar in hardness to a bowling ball. Complete hammers include a chrome-plated zinc alloy head, two screw-on nylon faces, and a replaceable ash handle (unless noted).

For replacement handles, see page 2866.

★ Replaceable hickory handle. ▲ Head is black-painted malleable iron.

Hard/Soft Plastic Replaceable-Face Hammers

Ideal for assembly applications where the components vary in hardness, hammers have a press-fit hard plastic face on one end and a press-fit soft plastic face on the other.

Hard face is yellow Surlyn, which is similar to the hardness of a bowling ball. Soft face is red Kraton, which is similar to the hardness of a shoe heel. Hammers have a forged steel head and a replaceable hickory handle. For replacement handles, see pg. 2866. **To Order:** For replacement faces, please specify hard or soft.

O'all Wt., lbs.	Face Dia.	O'all Lg.	Complete Hammers	Each	Repl. Faces	Each
9/16	1″	10 1/2″	3755A45	$15.04	3755A61	$2.04
1 1/8	1 3/8″	11 1/4″	3755A46	16.72	3755A62	2.12

Hard/Soft Rubber Replaceable-Face Hammer

You have two hardness options with this hammer. The white rubber face won't mark your work; it's medium hard and is similar in hardness to a plastic cutting block. The black rubber face is for general use; it's medium soft and similar in hardness to a shoe heel. Faces are replaceable and press-fit onto the head. Complete hammer has a forged steel head for extra driving power and a replaceable hickory handle. For replacement handles, see page 2866.

O'all Wt., lbs.	Face Dia.	O'all Lg.		Each
2 3/16	2″	14″	5939A11	$19.81
Black Replacement Face (Medium Soft)			5939A12	2.90
White Replacement Face (Medium Hard)			5939A13	2.90

Rawhide Replaceable-Face Hammers

Rawhide faces provide nonmarring blows on steel, brass, aluminum, and other soft metals. Faces press-fit onto the head. Worn faces can be removed by drilling out the center of the face. Complete hammers have a cast steel head, two press-fit rawhide faces, and a replaceable hickory handle (unless noted). **Also Available:** Replacement hickory handles. Please ask for 5907A25 and specify face diameter.

O'all Wt., lbs.	Face Dia.	O'all Lg.	Complete Hammers	Each	Repl. Faces	Each

● Has a malleable iron head and replaceable ash handle.

Copper Replaceable-Face Hammers

Copper faces allow high-impact blows, yet are soft enough to reduce the possibility of damage to precision parts. Use on bronze, brass, aluminum, and ferrous alloys. Faces press-fit onto the head. Worn faces can be removed by drilling out the center of the face. Complete hammers come with a malleable iron head, two press-fit copper faces, and a replaceable hickory handle (unless noted). For replacement handles, see page 2866.

O'all Wt., lbs.	Face Dia.	O'all Lg.	Complete Hammers	Each	Repl. Faces	Each

■ Replaceable ash handle.

Extra-Hard UHMW Polyethylene Replaceable-Face Hammers

Made of ultra-high molecular weight (UHMW) polyethylene, the faces on these hammers screw on to the head and shrug off abrasion, impact, and corrosion. They're unaffected by water and coolants. Faces are yellow and similar in hardness to a hard hat. Complete hammers include a steel head, two screw-on UHMW polyethylene faces, and a nonreplaceable hickory handle (unless noted).

O'all Wt., lbs.	Face Dia.	Thread Size	O'all Lg.	Complete Hammers	Each	Replacement Faces	Each

♠ Has an acetal handle with a cushion grip.

Acetal/Brass Replaceable-Face Hammer

Lightweight and versatile, this hammer has a screw-on acetal face on one side and a screw-on brass face on the other. Acetal is similar in hardness to a hard hat. Complete hammer includes a chrome-plated alloy steel head, two screw-on faces (one acetal, one brass), a nonreplaceable maple handle, and a spanner wrench to remove and replace the faces. ***Replacement face set*** includes one acetal face, one brass face, and a spanner wrench.

Rubber Hammers

White Rubber with Hardwood Handle

Black Rubber with Fiberglass Handle and Cushion Grip

Also known as rubber mallets, these hammers deliver a heavy blow, yet they have soft faces that won't damage your work. Made of a blend of natural and synthetic rubber, the head is molded and cured for strength. Handle is nonreplaceable, unless noted.

Rubber hammers are offered with either a hardwood handle or a fiberglass handle. 5917A7 and *A8* include a cushion grip. *White* hammers are nonmarking. ***No-bounce rubber*** hammers have fibrous layers in the head to greatly reduce bounce and rebound.

★ Handle is replaceable. For replacement handles, see page 2866.

Soft Alloy Replaceable-Head Hammers

An excellent alternative to lead hammers. The head is cast of a heavy zinc-aluminum material that's soft and ductile like lead, but more wear-resistant and longer lasting. To replace the head, simply remove the socket cap screw. Handle is steel and has a textured nonslip rubber grip that resists water, oil, and chemicals.

Also Available: Replacement steel handles. Please ask for 6042A61 and specify face diameter.

● Also known as a sledge.

Hickory Hammers

Made entirely of hickory, these top-quality hammers are well-balanced and coated with a clear, waterproof sealer. They're also known as wooden mallets. Use them on wood and for light duty sheet metal work. Handle is nonreplaceable.

O'all Wt., lbs.	Face Dia.	O'all Lg.		Each

Rawhide and Weighted Rawhide Hammers

Rawhide hammers cause minimal surface distortion. Also known as rawhide mallets, they're great for bending and fabricating sheet materials such as brass, copper, and steel. Handle is hickory and is replaceable. For replacement handles, see page 2866. ***Rawhide*** hammers have large-diameter faces that are great for use on broad surfaces. ***Weighted rawhide*** hammers are filled with lead to give a heavier, balanced blow.

O'all Wt., lbs.	Face Dia.	O'all Lg.		Each

Plastic Hammers

Sometimes called plastic mallets, these hammers deliver a soft blow. The head is made of opaque-yellow ultra-high molecular weight (UHMW) polyethylene; it's similar in hardness to a plastic cutting board. Handle is hickory and is nonreplaceable.

O'all Wt., lbs.	Face Dia.	O'all Lg.		Each

Lead Hammers and Hammer Molds

Complete Hammer with Steel Handle

Complete Hammer with Hickory Handle

Clamping Mold and Handle

Hammer heads are made of 95% lead and 5% antimony, giving them a longer life than heads made of 100% lead. Although lead is the softest metal offered within nonmarring hammers, it produces a heavy blow with minimal rebound and no surface blemishes. Use on plastics and soft, nonferrous metals such as copper and aluminum.

Hammers with Steel Handle—*Complete hammers* have a steel handle with a comfortable rubber grip. You can also make your own steel-handle hammers using molds, handles, and lead hammer metal, all sold separately. *Molds* have a built-in ladle that holds the exact amount of molten lead needed to form the hammer head. A C-clamp and thumb screw hold the mold together until the metal has set. *Handles* are reusable and made of solid steel with a rubber grip. *Lead hammer metal* is 95% lead and 5% antimony and comes in a 4 3/4-lb. bar. Pouring temp. range is 650° to 700° F. Melting point is slightly lower. ***Hammers with Hickory Handle—*** Have a nonreplaceable hickory handle.

3	2 1/2"	14 3/4"	5930A4	26.00

Copper Hammers and Sledges

Slightly softer than brass, copper is the perfect choice when striking aluminum, brass, bronze, ferrous alloys, and other brittle surfaces.

Styles A&C— All have a replaceable hickory handle with a textured, nonslip coating.

Also Available: Replacement hickory handles. Please ask for 5915A5 and specify overall weight.

Style B— Hammers have a replaceable fiberglass handle with a cushion grip. All have a handle guard to prevent breakage if you miss your mark. For replacement handles, see page 2866.

Brass Hammers and Sledges

A medium-hard material, brass can be used to strike steel, iron, stone, and other hard surfaces. Also used to bend and form sheet metal.

Styles D&H— Have a replaceable hickory handle with a textured, nonslip coating.

Also Available: Replacement handles. Please ask for 5978A5 and specify overall weight.

Styles E&J— Have a nonreplaceable tubular steel handle with a textured, nonslip coating.

Style F— Have a nonreplaceable aluminum handle with a textured grip, except for 6024A4 and 6024A5, which have a smooth grip.

Style G— Have a replaceable fiberglass handle with safety grip to prevent your hand from slipping. A handle guard prevents breakage if you miss your mark. For replacement handles, see pg. 2866.

Bronze Hammers and Sledges

Bronze is the hardest nonmarring material. It's ideal for striking tool steel and other hard metals.

Style K— Hammers have two square faces and a replaceable hickory handle. The handle is grooved to prevent your hand from slipping.

Style L— Have two square faces and a fiberglass handle. The handle is encapsulated in urethane and has a textured grip. Handle is nonreplaceable.

Style M— Hammers have one round face and one extended tapered nose for access to hard-to-reach areas. Handle is made of hickory and is replaceable. The handle is grooved to prevent your hand from slipping.

Style N— Slimline design has a round face on one end and a needle nose on the other for reaching into tight spaces. Handle is made of hickory and is replaceable.

Style P— These sledges have two square faces and a replaceable hickory handle.

Also Available: Replacement hickory handles. Please ask for 5893A35 and specify overall weight.

Ball Peen Hammers

A slightly rounded striking face with a beveled edge gives these hammers the ability to handle any job from light duty tapping to heavy duty forming. Use them for striking chisels and punches, as well as for setting rivets. The peen end is especially good for forming unhardened metal.

Style A—These classic style hammers have a steel head and a replaceable hickory handle. For replacement handles, see page 2866.

Styles B&C—Have a steel head with a solid fiberglass handle. All have a handle guard to prevent breakage if you miss your mark. For replacement handles, see page 2866. *Style B* has a smooth grip. *Style C* has a safety grip that's ribbed to prevent your hand from slipping.

Style D—Have a steel head and a sturdy graphite handle that's encased in molded PVC to prevent breakage if you miss your mark. The handle has a textured grip and is nonreplaceable.

Style E—Made from one piece of solid steel, these hammers have a cushion grip. The handle is nonreplaceable.

Style F—Head is steel. Handle is made of heat-treated steel rods that are surrounded by abrasion-resistant rubber. The rubber absorbs shock and reduces fatigue. Handle is unbreakable and nonreplaceable.

Extra-Hard UHMW Polyethylene Replaceable-Face Tapping Hammers

Here's a hammer without a handle that's great for tapping work into position. These nonmarring hammers have a hex-shaped steel body that won't roll when you set it down. Hammers include two screw-on faces that are made of ultra-high molecular weight (UHMW) polyethylene to resist abrasion, impact, and corrosion. Faces are yellow and similar in hardness to a hard hat.

O'all Wt., lbs.	Face Dia.	Thread Size	O'all Lg.	*Complete Hammers*	Each	*Replacement Faces*	Each
5/8	5/8″	1/4″-20	6 1/4″	**5951A1**	$15.38	**5912A18**	$2.48

Riveting and Setting Hammers

Riveting Hammers—Also known as tinners' hammers, these are great for driving and spreading rivets in sheet metal.

Setting Hammer—Also known as paneing or seaming hammers. Use to form sheet metal corners, close seams, and insert glazing points.

Hickory-handle models have a forged steel head and replaceable handle. For replacement handles, see page 2866. ***One-piece steel*** models are forged from a single piece of steel and have a nylon vinyl hand grip to reduce shock. Handle is nonreplaceable. ***Fiberglass-handle*** model has a forged steel head, slip-resistant PVC hand grip, and nonreplaceable handle.

Bricklayers', Masons', and Tilesetters' Hammers

Hammers have a carbon steel head with a square flat face on one end and a curved chisel on the other for trimming, shaping, and cutting bricks, concrete blocks, and masonry tiles. They're also good for chipping mortar off bricks. The handles can be replaced on the steel-head hammers (see page 2866 for replacement handles); the handles are not replaceable on the one-piece hammers.

Head Wt., oz.	Face Size	O'all Lg.		Each
Steel Head with Hickory Handle

■ Has a double-lacquered leather grip.

Heavyweight Hammers

Strike a powerful blow, even when swing area is limited. Hammers have a shorter handle than sledges for use in confined work areas. All heads are made of painted carbon steel and have a polished striking face with beveled edges.

One-Piece Steel Hammers—Head and handle are forged from a single piece of steel. Handle is nonreplaceable; a cushion grip reduces shock.

Hickory Handle Hammers—Have a hickory handle that is replaceable. For replacement handles, see page 2866.

Fiberglass Handle Hammers—Handle is fiberglass and encapsulated in polypropylene, which prevents handle from breaking if you miss your mark. Handles are replaceable. For replacement handles, see page 2866.

A *One-Piece Steel*

A *w/Hickory Handle*

B *One-Piece Steel*

C *w/Fiberglass Handle*

Style A

This is the most popular style within the heavyweight hammer family. Also called engineers' hammers, they're for forming metal and for driving punches, cold chisels, and rock drills.

Sledges

Also known as blacksmith-style sledges, these tools provide maximum striking power for all of your extra-tough jobs. All sledges have a painted head and crowned and beveled striking faces. Use them for striking stone, concrete, and hardened nails, unless noted.

Hickory Handle

Heads are made of carbon steel and have polished faces. Handles are hickory and can be replaced. For replacement handles, see page 2866.

Head Wt., lbs.	Face Dia.	O'all Lg.		Each
6	2″	36″	5884A14	$23.17
6½	2″	36″	5884A22	28.89

16	2⅞″	38″	5988A26	214.65

Replacement Hickory Handle ..... 5988A29 **Each** $22.22

Driving Maul

A maul is similar to a sledge hammer, but has a longer, slimmer head. It's often used to drive and punch out pins when aligning structural steel components or maintaining machines. Also known as a spike maul, this tool is great for driving railroad spikes. Head is made of carbon steel with a painted finish. Handle is hickory and can be replaced; for a replacement handle, see page 2866.

Head Wt., lbs.	Face Dia.	O'all Lg.		Each
10	1¼″, 1⅝″	36″	5932A8	$92.36

Sledge and Ax Handle Protectors

Add a durable rubber collar to your tool's handle to protect it from cracking and the wear that can occur if you miss your mark.

Sheet Metal Forming Tools

Also known as body and fender tools, these tools are excellent for forming and repairing dents in sheet metal components. All are made of forged steel.

(A-H) Hammers— All measure approximately 12″ long and have a smooth face (except where noted).

(J) Dinging Spoon— To protect the finish of your workpiece, place this tool against the workpiece you're forming or repairing and strike with a hammer. It's often used to smooth ridges.

(K) Dolly Block with Handle— A long handle allows this tool to get into hard-to-reach spots.

(L-P) Dolly Blocks— Place blocks on the back side of your workpiece to act as a support when you strike the workpiece.

Welders' Chipping and Scaling Hammers

Chip away unwanted weld spatter and slag as well as rust and paint from metals. All hammers have a steel head and shank (unless stated otherwise). Handles are replaceable, except for the handle on Style R hammers. ***Styles T*** and ***U*** have a wire coil handle that provides a flexible grip and dissipates heat. ***Style U*** also has a replaceable wire brush and is made entirely of steel.

Magnetic Brad Driver

The magnetic point holds the brad; push the handle to easily drive and countersink 16-ga. brads up to 1½″ long. Shaft is carbon steel; handle is hardwood. Overall length is 6″.

5702A11 ..... Each $6.84

McMASTER-CARR®

For replacement handles, see page 2866.

Nail Hammers

A

B Straight Claw

B Curved Claw

C

D

Hit the nail on the head with any one of these hammers. All have a polished head (except where noted). Choose hammers with a ***straight claw*** for ripping and prying; hammers with a ***curved claw*** are for removing nails. Hammers with a ***milled (serrated) face*** prevent the head from slipping when striking.

Style A have a hickory handle that's replaceable.

Style B have a fiberglass handle that resists breakage if you miss your mark. Handles are nonreplaceable. *Straight claw* hammers have a hollow core that reduces vibration and a smooth cushion grip that reduces fatigue. *Curved claw* hammers have a solid core that reduces impact and wear. A cushioned safety grip prevents your hand from slipping.

Style C have a graphite handle with a graphite core and a molded polycarbonate casing that reduces shock and prevents breakage if you miss your mark. Hammers also have a ribbed cushion grip for added shock reduction. Handles are nonreplaceable.

Style D have a cushion grip that reduces shock. The handles are nonreplaceable.

Axes

Utility Ax

Lumberjack Ax

Firefighters' Ax

Axes have a forged steel head with a sharpened cutting edge. Handle is hickory and can be replaced.

Utility Ax— With its short handle, this ax is great for confined spaces. It has a black powder-coated finish to resist rust and scratches.

Lumberjack Ax— With its longer handle and larger cutting edge, this ax is the choice for big cutting jobs. It has a black powder-coated finish to resist rust and scratches.

Firefighters' Axes— Axes have the traditional bright red head for easy visibility. One end has a cutting edge for chopping; the other end has a pick end for ripping.

Slide-Bar Hammers

Slide-Bar Hammer

Optional 7/8″ Dia. Face

No need for a separate hammer and chisel. These hammers have a slide bar that acts as a sledge, eliminating the danger of swinging a traditional sledge hammer. To use, extend the slide bar's handle and forcefully push it into the hammer's steel chamber. The bar strikes against the removable driver face, delivering accurate driving power. Perfect for one-person jobs on heavy equipment and for limited-space areas where it would be difficult to swing a regular sledge. A slide lock keeps the bar in place when not in use. Hammers are made of steel. Furnished with a 2″ dia. steel face. ***Optional 7/8″ dia. face*** fits both hammers below.

Shown with Optional 7/8″ Dia. Face

Hickory Replacement Handles

A

B

C

D

Handles are slotted and made of quality hickory. Styles A-C come with one steel and one wood wedge (unless noted) to use together for a secure fit. Style D handles come with one wood wedge (unless noted).

All-White Grade AA— The highest grade available. This straight-grain, smooth and dense hickory is free from defects. Handles have a wax finish that provides a longer service life than Grade A hickory. 5976A18 and 5976A33 are red and white.

Flame-Tempered Grade A— Fire-finished hickory is coated with a clear lacquer to resist aging, dirt, moisture, and weathering.

■ Not slotted; has one steel wedge. ▲ Has two steel wedges and one wood wedge.

Fiberglass Replacement Handles

With Smooth Grip

With Safety Grip

Ax Handle with Smooth Grip

Solid fiberglass handles are durable and impact resistant. They won't split like wood handles.

Wedge-Style Handles— Furnished with two synthetic wedges for quick and easy assembly (does not require epoxy). The wedges are ribbed to ensure a tight fit. Choose handles with a smooth cushion grip or a ribbed safety grip that prevents your hand from slipping. 36155A22 and *A24* are encapsulated in polypropylene to prevent breakage if you miss your mark.

Epoxy-Style Handles— Furnished with epoxy bonding compound, mixing stick, and tape seal. Just pour mixed epoxy into the tool head, place the handle in the tool head, and let the epoxy cure. Epoxy fills in around the handle, compensating for different eye patterns and ensuring a secure fit. Choose handles with a smooth cushion grip (except for ax-handle style, which is not cushioned) or a ribbed safety grip that prevents your hand from slipping.

252-Piece Steel Wedge Assortment— Contains 36 wedges for small hammers, 36 wedges for nail hammers, 36 wedges for large hammers, 36 wedges for sledges, 12 wedges for axes, 12 round wedges (9/16″ dia.), and 12 round wedges (3/4″ dia.). Also includes 72 steel rivets (3/16″ Dia. × 1 5/8″ Lg.). Wedges are smooth. Comes in a plastic box.

6676A9 ..... Each $49.94

Standard 0.401″ Shank Air-Powered Hammers

Also known as zip guns, these air-powered hammers easily handle metal cutting, chipping, scraping, and staking applications. They have a metering trigger that controls the number of blows per minute. Their piston stroke determines the hammering power; the longer the piston stroke, the greater the power. For example, a light duty hammer has a short piston stroke for fast-hitting, but has less power than a slower-hitting heavy duty hammer, which has a longer piston stroke. All hammers use standard 0.401″ shank chisels (sold separately, see 7117A on this page) and have a maximum operating pressure of 90 psi.

A-C ***Nonriveting Hammers—*** Have an aluminum housing, alloy steel barrel, and mechanical aid spring retainer (for replacement see 59005A24 on this page). Not suitable for driving rivets. ***Hammer sets*** include the hammer and one each of the following: 3/4″ Wd.×7 3/4″ Lg. edging tool, 3/4″ Wd.×7 3/4″ Lg. muffler/tail pipe cutter, 3/4″ Wd.×7 3/4″ Lg. flat chisel, 3/4″ Wd.×7 3/4″ Lg. cutting chisel, and 15/32″ Dia.×7 3/4″ Lg. tapered punch. Connections: NPT female.

D ***Medium Duty Riveting Hammer—*** Can accept up to 3/16″ size soft iron and aluminum rivets. It has an aluminum housing, heat-treated steel barrel, and beehive spring retainer (for replacement see 59005A23 on this page). ***Hammer set*** includes the hammer; air regulator; and one each of the following: 1/8″, 5/32″, and 3/16″ dia. round rivet setters. Furnished in a plastic box. Connections: NPT female.

E&F ***Heavy Duty Riveting Hammers—*** Can accept up to 3/8″ size soft iron and aluminum rivets. They have an aluminum housing, heat-treated steel barrel, and beehive spring retainer (for replacement see 59005A23 on this page). ***Hammer sets*** include the hammer and one each of the following: 3/16″ and 1/4″ dia. round rivet setters. Connections: NPT female.

Air-Powered Hammer Retainers

All of these retainers accept standard 0.401″ shank chisels and tools. ***Quick-change retainers*** can replace retainers on air-powered hammers that have a threaded barrel. *Type 1 compatible quick-change retainer* has a pliable insert for a tight fit; *Type 2 compatible quick-change retainer* has a set screw adjustment. ***Spring retainers*** are replacements for air-powered hammers equipped with spring retainers.

Type 1 Compatible— Retainers are compatible with Chicago Pneumatic models 9311, 9315, 711, 714, 715, and 4444; Dayton; Cleco E3, E4, E15, and E16; Universal Tool; Florida Pneumatic; Snap-On models PH45 and PH50; and Ingersoll-Rand models 115, 116, and 117.

Type 2 Compatible— Retainers are compatible with Ingersoll-Rand models MC121 (700 series) and AV 10-12-13 as well as all Superior Pneumatic models.

Quick-Change Air-Powered Hammers

Straight Handle

Pistol Handle

A good choice for applications that require fast hitting and light tapping. Hammers have a compact design and work well for scaling, trimming, cutting, chipping, piercing, and peening. Not suitable for driving rivets. A quick-change retainer lets you easily change chisels and lock them in place, even at various angles. The chuck is not removable. Hammers have an aluminum handle and a heat-treated steel barrel. The longer the piston stroke, the greater the force the hammer delivers. A metering trigger controls the blows per minute. Operating pressure is 90 psi. Connections: NPT female.

Note: The 0-13,000 bpm hammers only accept the 6027A octagon shank chisels and tools sold separately below; the 0-9,000 bpm hammers only accept the 6027A hex shank chisels and tools sold separately below.

Air-Powered Chipping Hammers

Gooseneck Handle

D Handle

Put these hammers to work on heavy construction jobs as well as in foundry and fabrication shops. The longer the piston stroke, the greater the force the hammer delivers. All of these chipping hammers use United States Navy (U.S.N.) style shank oval-collar flat chisels or oval-collar moil points (7083A sold separately on this page). Maximum operating pressure is 90 psi. Connections: NPT female.

The retainer on these hammers has a black-oxide coating. ***Gooseneck-handle*** hammers allow a firm grip and a quick release. They have a carbon steel handle with a hardened steel barrel and a plated piston for reduced wear. The ***D-handle*** hammers offer a firm grip with added safety. They have a forged steel handle with a heat-treated steel barrel and a plain piston. ***Swivel hose connectors*** eliminate cracked hoses due to kinking and broken inlet bushings. The connectors screw into the air inlet and allow hose to swivel with the hammer. ***Mufflers*** cover the tool's exhaust ports to reduce sound.

Electric Demolition Hammers

DeWalt

Milwaukee

Easily break through concrete walls and floors with these demolition hammers. The side handle rotates 360° for maximum control. Operate on 120 VAC, 50/60 Hz. Hammers use ¾″ hex shank chisels that are for electric demolition hammers; see 59305A sold separately on this page. Meet OSHA requirements.

DeWalt— Soft rubber-coated grips and an anti-vibration system provide fast cutting with less fatigue. Hammer has locking on/off switch. You can rotate the chisel to one of 12 positions to align the bit according to your needs. Hammer body is made of magnesium and aluminum, and the dust seals are spring loaded for longer life. Operates on 15 amps. Comes with a 13-ft. cord with a three-prong plug, and a nylon case. UL listed and CSA certified.

Milwaukee— Hammer has ball and roller bearing construction, a two-finger trigger switch, and a speed lock-on button. The body is made of aluminum; handles are glass-reinforced nylon with a cushion grip. The back handle has vibration isolation for less fatigue and a soft grip for extra comfort. Hammer operates on 14 amps. It comes with a 10-ft. cord with a two-prong, double-insulated plug and a steel carrying case. UL listed and C-UL listed.

Bosch Brute Electric Pavement-Breaker Hammer

This heavy duty hammer delivers a powerful blast for heavy pavement-breaking and asphalt-cutting jobs. It's double insulated, has ball bearing construction, and has a brush system that turns off the hammer when brushes are worn. Hammer is made of cast aluminum. Handles absorb shock to reduce fatigue. Operates on 120 VAC/DC, 50/60 Hz, 15 amps, or a 2,500-watt portable generator. Comes with a 10-ft. cord with two-prong plug. Meets OSHA requirements and is UL listed.

Hammer uses 1 1/8″ hex shank chisels that are for electric pavement-breaker hammers; see 3615A, 3613A, 3617A, and 3616A sold separately on this page.

Air-Powered Pavement-Breaker Hammers

60-lb./ 90-lb. Class

One-piece housing eliminates side rods and springs, which reduces your cost for parts. These hammers have a built-in lubricator and a safety throttle that shuts off instantly when released. Cylinder is made of ductile iron. The latch-type front head is foot-operated for rapid tool changes. Max. operating pressure is 90 psi with a ¾″ min. hose ID. Air inlet is ¾″. Connections: NPT male.

The ***60-*** and ***90-lb. class models*** also have an exhaust deflector, a piston cycle that transfers blow energy to the tool, a four-bolt back-head plate for easy maintenance, and a special spring-loaded anvil bushing that can be serviced without a hydraulic press.

Use hex shank chisels that are for air-powered pavement-breaker hammers; see 3615A, 3613A, 3617A, and 3616A sold separately on this page.

Combination Air-Powered Chipper/Scraper

Remove weld flux, spatter after welding, and perform a wide variety of light chipping applications with one tool. This combination chipper/scraper has an alloy steel body and a straight steel handle. It is equipped with a curved flat chisel that has a 1″ Wd. × 6 3/32″ Lg. blade. Maximum operating pressure is 85 psi.

Connections: NPT female.

Blows per Minute	Piston Stroke	cfm @ 85 psi	Air Inlet	Min. Hose ID	O'all Lg.	Wt., lbs.		Each
4,000	1 1/8″	7.1	3/8″	3/8″	12″	3 3/4	6018A48	$255.86

Air-Powered Demolition Hammer

Demolish bricks and concrete walls and foundations. Barrel is hardened steel with a durable, forged-steel handle that has a leakproof throttle valve for positive shutoff. Piston and barrel design provides an air cushion between piston and accessory for maximum accessory life. A lock assembly keeps accessories firmly attached. Max. operating pressure is 90 psi with a 1/2″ min. hose ID. Use with 0.890″ demolition hammer chisels; see 36205A on this page. Weight is 24 3/4 lbs. Connections: NPT female.

Air-Powered Needle Scalers

Mini needles tap surfaces to gently remove unwanted rust, scale, paint, and weld spatter. They generate very little dust and are excellent for use on irregular-shaped and hard-to-reach areas. Piston stroke determines the force of a scaler; the longer the piston stroke, the greater the force. Scalers are lever operated, except for Style C, which is button-operated. All come with flat blunt-tip needles. Connections: NPT female.

A ***Economy Needle Scaler***—Scaler is made of steel. Needle housing holds and is furnished with 12 (3 mm×7″) steel needles. Operating pressure is 80 to 100 psi. ***Scaler set*** includes scaler, three sets of 12 (3 mm×7″) steel needles, two 7″ Lg.×3/4″ Wd. narrow chisels, a 7″ Lg.×1 3/8″ Wd. wide chisel, a 7″ Lg.×1 3/8″ Wd. angle chisel, a return spring, and a chisel adapter. Comes in a metal carrying case.

B&C ***Adjustable-Blow Needle Scalers***—Change the number of blows per minute by adjusting the amount of pressure you place on the button. Scalers are steel with an aluminum handle and include two sets of nine (1/8″×5″) steel needles. Needle housing holds one set of needles. Operating pressure is 90 psi. ***Scaler sets*** include a scaler, two sets of nine (1/8″×5″) steel needles, and one each of: 7″ long gouge chisel, 4″ Lg.×9/16″ Wd. flat chisel, 7″ long grooving chisel, 3 1/2″ long peening chisel, and a chisel adapter. Comes in a plastic case.

D ***Spring-Less Needle Scaler***—Scaler has no internal springs to break, ensuring consistent performance. Made of aluminum. Comes with 28 (3 mm×7″) steel needles, a set of 14 (4 mm×7″) steel needles, a 4 mm needle holder, an installation tool for needle holders, and a 3/8″ hose nipple. Max. operating pressure is 85 psi.

E&F ***Low Vibration Needle Scalers***—Scalers produce 80-90% less vibration than conventional tools. All are made of steel. Maximum operating pressure is 90 psi. *Style E* holds 18 (1/8″×7″) steel needles and comes with two sets of needles. *Style F* holds 19 (1/8″×7″) steel needles and comes with one set of needles.

G ***Combination Needle Scalers/Scaling Hammers***—Tools are made of steel. They hold and are furnished with 19 (1/8″×5″) steel needles. Scalers have a built-in chisel retainer. Use scaling hammer chisels to convert tools into scaling hammers. For scaling hammer chisels, see 6097A sold separately on this page. Meet Mil. Spec. MIL-S-23492A. Maximum operating pressure is 90 psi. ***Scaler sets*** include a needle scaler, two sets of 19 (1/8″×5″) steel needles, one set of 19 (1/8″×7″) steel needles, and one each of the following: 6 1/8″ Lg.×1 3/8″ Wd. angle chisel, 6 1/8″ Lg.×1 3/8″ Wd. straight chisel, and 7″ Lg.×3/4″ Wd. narrow chisel. Come in a vinyl carrying case.

Chisels for Needle Scalers

Made of heat-treated alloy steel. Use ***Style 1 shank*** chisels with the Economy Needle Scaler and Combination Needle Scalers/Scaling Hammers on this page as well as Chicago Pneumatic model CP 0456, Jet model F-25, and Chicago Monarch brands. Use ***Style 2 shank*** chisels with Cleco model BI-C, Chicago Pneumatic model 9356, Ingersoll-Rand model 125, Jet model JSG-9121, and Universal Tool model 8630.

For chisels compatible with the Adjustable-Blow Needle Scalers on this page and all Superior Pneumatic models, see chisels for 0-13,000 bpm hammers (6027A) on page 2868.

Wrecking and Pry Bars

Some of these bars have pointed ends, which work well for aligning bolt holes in steel construction. *End width* is measured at the wedge, pinch, chisel, or rocking end of the bar. ***Offset (bent-tip) bars*** have at least one bent end to provide better leverage for lifting and moving.

Straight Bars

A Wedge- and Rounded-End Bars—Ideal for prying and moving heavy objects with wedge leverage. Forged from high-carbon steel square bar with a painted finish.

B Pinch- and Rounded-End Bars—Tools have a single taper that forms the pinch tip—they're great for getting into small crevices. Forged from high-carbon steel square bar with a painted finish.

	Lg.	Wt., lbs.	Bar Size	End Wd.		Each

Offset (Bent-Tip) Bars

E Lightweight Pinch- and Pointed-End Bars—Lightweight aluminum with the strength of steel. Bars consist of a forged steel alloy pinch on one end and a pointed steel end riveted to high-strength aluminum hex bar.

F Offset-Wedge and Pointed-End Bars—Also known as warehouse/loading bars, these tools have a rounded handle that's tapered for prodding. Forged from high-carbon steel square bar with a painted finish.

G Gooseneck-Chisel and Pointed-End Bars—The gooseneck end provides extra leverage. Made of forged alloy steel hex bar.

H Double-Chisel-End Wrecking Bars—Have an offset chisel on one end and a straight chisel on the other. Forged from high-carbon steel hex bar with a painted finish.

J Double-Offset Chisel-End Bars—Also known as stripping bars. Each end has an offset chisel for easy prying. Forged from high-carbon steel hex bar with a painted finish.

K Offset-Chisel and Pointed-End Bars—Forged from high-carbon steel hex bar with a painted finish, unless noted.

L Rocking-Head Wedge and Pointed-End Bars—Have a rocking head that provides maximum leverage. Forged from heat-treated steel round bar with a nickel-chrome finish.

★ Made of forged alloy steel hex bar.

Pry Bars and Nail Pullers

A&B ***Gooseneck-Claw and Offset-Claw Bars—*** Sharp, tapered thin blades handle prying, scraping, and nail pulling. Both ends have claws. Bars have three nail slots. Forged from high-carbon steel.

Style A has a gooseneck rocking head for extra leverage.

Style B has an arch for more swing during pulling and prying without the need for a block for leverage.

	Lg.	Wt., lbs.	Bar Size	Claw Wd.	Finish		Each
A	5¼″	1/16	½″	½″, ½″	Plain	6000A3	$3.72

B	15½″	1¾	1⅜″	1¾″, 1¾″	Painted	6769A12	12.41

C-E ***Double-Offset Claw Bars—*** Both ends have claws. Forged from high-carbon steel with a painted finish.

Style C bar is hex shaped and has three nail slots.

Style D has an I-beam design to give you extra strength without adding weight to the tool. The rocking head provides maximum leverage. Bar has three nail slots.

Style E is also known as a bear claw. Flat claw is for easy wedging with minimal wood damage; extra-heavy rocking head provides maximum leverage.

	Lg.	Wt., lbs.	Bar Size	Claw Wd.		Each

E	14¼″	1⅝	⅝″	1″, 1″	37205A74	19.19

★ I-beam thickness.

F ***Screwdriver Pry Bars—*** The curved screwdriver blade gives you the extra leverage you need to handle tough prying jobs. Bars are made of hardened and tempered alloy steel. Bars 31″ and shorter have a hard plastic handle. Bars 36″ and longer have a cushion-grip handle for a comfortable and secure grip; they also have a capped end that allows you to strike the pry bar without damaging the handle.

Plastic Wedges

Wedges are made of plastic, so they won't damage material.

ABS Plastic Wedges— Lightweight, yet strong. *Style 1* wedges are for separating and holding material. They won't chip or shatter, even in subzero temperatures. For use with wood and other soft materials. *Style 2* wedge is for leveling, aligning, and prying apart materials. It's ideal for use in larger, heavier jobs such as framework and doors.

Lg.	Blade Wd.	Blade Ht.	Wt.		Each

5958A71 ..... **Per Set** $45.21

Pallet Buster

Easily disassemble pallets and skids to be recycled. This high-leverage tool is safer than chain saws, axes, and sledges. It has a zinc-plated steel breaker head and a 1 1/4″ tubular aluminum handle. Position forks in pallet slats, and push handle down. The breaker head provides prying leverage. There is a 3″ space between the forks.

(A)	(B)	(C)	Wt., lbs.		Each
8 7/8″	4″	44 1/16″	8	58585A65	$69.67

Pipe Flange Wedges

Ideal for breaking open pipe flanges in refineries, as well as for pipeline maintenance. ***Beryllium copper*** wedges are nonsparking (see page 2854 for additional nonsparking wedges).

Style A— Has slightly concave wedging surfaces for interlocking when used in pairs.

Style B— Has a curved shape.

T-Handle Pipe Flange Spreaders

Make gasket replacement fast and easy, even in hard-to-reach locations. Spreaders are made of steel with a black-oxide finish. They exert extreme pressure smoothly and evenly with minimal operator effort. To use, place hooks in flange bolt holes and turn the T-handle. Units allow you to part flanges quickly and hold them in perfect alignment without damaging flange faces. *Note:* Use in pairs for even distribution of pressure. Capacities are for standard raised-face flanges.

PIPE SIZE RANGE: Cast-Iron Flange 125-lb.	Cast-Iron Flange 250-lb.	Steel Flange 150-lb.	Steel Flange 300-lb.		Per Pair
2″ to 20″	1″ to 12″	2″ to 20″	3/4″ to 12″	59125A1	$287.16
16″ to 48″	12″ to 30″	18″ to 24″	12″ to 24″	59125A2	562.32

Hex Bolt Pipe Flange Spreaders

Shown with Two Spreaders

High-quality, alloy-steel spreaders are heat-treated to handle tough jobs without distortion or breakage. Compact in size, units are perfect for use on standard pipe and ring-type joint flanges. They're easy to use—remove bolt from flange to insert support rod, and turn the hex bolt to drive the spreader.

Note: A spreader is required on each side of the flange for even distribution of pressure.

Pipe Size Range 150-lb. Flange	300-lb. Flange	Hex Screw Size		Each
2″ to 6″	3/4″ to 2 1/2″	1 1/2″	59135A22	$248.50
5″ to 16″	2 1/2″ to 6″	1 1/2″	59135A24	257.10
14″ to 42″	10″ to 22″	1 5/8″	59135A26	325.63
22″ to 42″	16″ to 36″	1 5/8″	59135A28	431.87

Ratchet-Action Pipe Flange Spreaders

Slip these lightweight, easy-to-use spreaders over pipe flanges to separate stubborn connections. They're safe to use—no more hammer blows, chisels, or flying wedges. All are made of steel.

Spreaders have two 3/4″ pins that fit into the bolt holes on your flanges. Applying pressure to the ratchet handle forces a circular cam wedge between flanges to separate them. Use spreaders on standard raised-face flanges. Multi-range spreader is also suitable for large-diameter flanges with up to 750° F steam. All come with a female square-drive reversible ratchet. Furnished with a metal carrying case for the spreader; case for standard range spreader also holds the ratchet.

Standard Range— For 150-lb. flanges up to 20″ pipe size; 300-lb. flanges up to 6″ pipe size.

Multi-Range— *For standard raised-face flanges:* 150-lb. flanges 12″ to 24″ pipe size; 300-lb. flanges up to 24″ pipe size. *For large-diameter flanges with up to 750° F steam:* 150-lb. flanges 26″ to 72″ pipe size; 300-lb. flanges 26″ to 42″ pipe size.

Deluxe Range— For 400-lb. flanges up to 24″ pipe size; 600-lb. flanges up to 20″ pipe size; 900-lb. flanges up to 16″ pipe size; 1500-lb. flanges up to 8″ pipe size; 2500-lb. flanges up to 5″ pipe size.

	Ratchet Size		Each
Standard Range	3/4″	59115A1	$875.00
Multi-Range	1″	59115A2	1,055.00
Deluxe Range	1″	59115A3	1,067.50

Tapered Alignment Pins

Use alignment pins to align structural components such as I-beams and angle irons for bolting, riveting, and welding. Pins are made of carbon steel, unless noted.

Styles A-E— To align bolt holes, simply drive pins into the drilled holes of two structural components. When ordering, select a pin with a diameter that is 1/16″ larger than the diameter of the bolt or rivet being used. Diameter is measured at the widest part of the pin, unless noted.

Style F— To align bolt holes, fit the tapered end of the pin into the bolt holes and use a wrench on the hex head to rotate and align the holes. If your bolt hole is in between the sizes listed, choose the smaller size pin.

(A) Single-End Alignment Pins

Dia.	O'all Lg.	Taper Lg.	Point Size		Each

1 1/16″	8″	7″	5/16″	6059A6	10.54

(E) Broad-Head Alignment Pins

Often called bull pins, these pins are designed to resist mushrooming caused by repeated pounding. The large striking surface allows you to drive the pins quickly and efficiently. Flat surfaces are forged below the head for use as a wrenching surface.

Dia. ♦	O'all Lg.	Taper Lg.	Point Size		Each
1 1/16″	10″	5 1/2″	1/4″	6057A11	$24.25
1 1/4″	13″	6″	5/16″	6057A12	33.80

♦ Diameter at the top of the pin, below the pin head.

(F) No Strike Hex-Head Alignment Pins

A specially designed shaft eliminates the need for hammering and prying when aligning bolt holes. Unlike most other pins, these are reusable—use them for your next aligning job. Pins are heat-treated alloy steel with cadmium plating for corrosion resistance. Great for use on flanges and steel framing.

For Bolt Hole Size	O'all Lg.	Taper Lg.	Point Size		Each

Sun-Guard Window Shades

Made of see-through metalized polyester, shades block light and up to 99% of UV rays. All have a spring roller except custom shades with mounting width 100″ and greater, which have a clutch roller. Furnished with universal mounting brackets (for inside, outside, and ceiling mounts) and mounting hardware. ***Embossed*** shades have a raised pattern for improved scratch resistance. *Note:* Shades with mounting width greater than 73¼″ and/or length over 72″ will have a seam.

Embossed

Standard Shades—6 ft. long; for use on 5-ft. high windows

Mounting Width	Smooth (Gray) % of Light Blocked			Embossed (Gray) % of Light Blocked		
37¼″	92	1035A23	$237.14	90	1230A11	$226.60
46¼″	92	1035A24	247.46	90	1230A12	236.74

73¼″	92	1035A26	278.42	90	1230A14	267.19

Custom Shades—We can provide shades up to 144″×144″

To Order: Please ask for 1035A888 and specify mounting width (widths greater than 72″ will have a seam), length (we will add extra material to allow sufficient shade on the roller), and color (embossed gray, smooth gray, smooth gray interior and silver exterior, smooth bronze interior and gray exterior).

Color Sample Pack—Color samples for custom shades.
1035A12 ..... $5.08

Sun-Guard Window Film

In the summer, this film reflects the sun's heat energy; in the winter, it minimizes heat loss. Film also blocks up to 99% of UV rays. Made of see-through metalized polyester, so it won't spoil your view. 1 mil thick.

For indoor use on single- and dual-pane windows with ⅛″ or ¼″ thick glass. Apply with a soap and water solution. *Application kit* includes spray bottle of solution, edge trim guide, trimming blade, and squeegee.

Wd.	% of Light Blocked	% of Summer Heat Blocked	15-ft. Length		100-ft. Length

Privacy Window Film and Spray

Nonreusable Polyester Film—For indoor use on single- and dual-pane windows. Film blocks up to 99% of UV rays and 23% of light.

Reusable Vinyl Film—For indoor use on single-pane windows. It's easy to apply, remove, and reapply. Film remains pliable in temperatures from 32° to 150°F. *White* film blocks 26% of light. *Black* film blocks 95% of light. *Note:* Not recommended for indoor use on dual-pane, wire, and tinted glass. Heat buildup could crack the glass.

Application kit includes spray bottle of solution, blade, and squeegee.

Privacy Window Shades

These room-darkening privacy shades won't let anyone see in. All shades are made of vinyl-coated fiberglass and have a spring roller. Furnished with universal mounting brackets (for inside, outside, and ceiling mounts) and mounting hardware. A minimum window depth of 2¾″ is required for inside mounting. Shades are flame retardant and meet Federal Specification CCC-C-521E.

Note: Shades with mounting width greater than 72″ and/or length over 72″ will have a seam.

Standard Shades—6 ft. long; for use on 5-ft. high windows

Mounting Width	Color		
37¼″	White	1031A65	$145.20
46¼″	White	1031A66	150.90
55¼″	White	1031A67	156.60
73¼″	White	1031A68	168.00

Custom Shades—We can provide shades up to 120″×120″

To Order: Please ask for 1031A888 and specify mounting width, (minimum available width is 24″), length (we will add extra material to allow sufficient shade on the roller), and color (white, ivory, or black).

Mini Blinds

Twist the plastic wand to adjust these slim 1″ slats for light control and privacy. Furnished with universal mounting brackets (can be used for inside, outside, and ceiling mounts) and mounting hardware. Inside mounting requires a min. window depth of 1½″ for light-filtering blinds (1 13/16″ for 1038A59) and ⅞″ for room-darkening blinds. Can be used on windows up to 4″ shorter than lengths listed. **To Order:** For room darkening blinds, please specify white or dark brown.

Also Available: Other sizes and colors. Please ask for 1038A888 and specify light-filtering blinds or room darkening blinds, mounting width, length, inside or outside mount, and color (room-darkening blinds only). Max. mounting width is 78″ for light-filtering blinds; 102″ for room-darkening blinds.

Color Sample Pack—Color samples for custom room-darkening blinds.

Frame-Mount Door Weatherstripping

Mount weatherstripping to the sides and top of your door frame. All have a metal flange with mounting holes and a sealing insert. Mounting screws are included. UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. All styles meet UL 10B. All except Style 2 also meet UL 10C.

Style 1— Has a hollow bulb insert that compresses easily and remains flexible in low temperatures. *Silicone* inserts are not effected by ultraviolet light. *Neoprene* inserts resist abrasion. *Polyurethane* inserts are not effected by ultraviolet light, plus they resist oil, tears, and abrasion. *Vinyl* insert weatherstripping is the most economical choice.

Style 2— Has a thick, sponge-like ridged insert that provides a dense seal with some noise control.

Style 3— Because this dense, flexible nylon brush conforms to fill gaps, it's a great choice for sliding doors.

Style 4— Has a magnet covered in flexible vinyl. Use with metal doors.

Styles 5&6— Flange is Type 304 stainless steel to provide corrosion resistance and stand up to harsh weather.

To Order: Please specify length: 3, 4, 6, 7, or 8 ft.

Double-Door Weatherstripping

Seal the space between your wood or metal double doors. Flanges have mounting holes and come with screws. All styles are UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Meet UL 10B. All except Styles 9 and 10 meet UL 10C. ***Styles 7-9*** are sets of two strips. ***Styles 10-12*** are single strips.

Style 7— Inserts mesh together to seal gap. ***Style 8—*** Inserts overlap to seal gap. ***Style 9—*** Once mounted, each insert adjusts 9/16″ for fit. ***Style 10—*** Has two flanges and a neoprene strip that wraps around one double door to create a hollow bulb. For doors up to 1 3/4″ thick. ***Styles 11&12—*** Mount strip to one door to overlap second door when closed.

Adhesive-Backed Weatherstripping

Apply this adhesive-backed weatherstripping to the inside of your door frame and around windows to seal gaps quickly and easily. ***Styles 13-16*** come in rolls and can be cut to desired length with metal shears. ***Style 17*** comes in strips.

Fire Seal— Made of graphite that expands at high temperatures to completely seal gaps and prevent the spread of fire. UL classified for use with wood fire doors rated for 1½ hours. Meet UL 10B and UL 10C. *Style 13* is wing shaped to fit snugly into the corners of your door frame.

Smoke Seal— Made of silicone rubber and seals gaps to prevent the spread of smoke. UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Meets UL 10B, UL 10C, and UL 1784. UL listed as a smoke and draft control gasket. Temp. range is –40° to +250° F.

Pile— Made of polypropylene to reduce rattling. Temperature range is 23° to 176° F.

Metal— Has some flexibility and compresses to form a tight seal between doors and frames. UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Meet UL 10B. Temp. range is 0° to 180° F. 1115A2 is bronze; 1115A61 is Type 301 stainless steel.

Door Bottom Sweeps

Cover the gap below your door to keep out drafts, dust, light, and weather. Sweeps have mounting holes to attach to the bottom face of the door using the included mounting screws. These sweeps are often used with thresholds (sold separately, see pg. 2880) to completely fill the gap underneath your door. UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. All styles meet UL 10B. Styles 1, 4, and 6, plus 17815A53 and 17815A55, meet UL 10C.

Style 3 has a triple-flap vinyl insert for better sealing. ***Style 4*** insert has dense, flexible nylon filaments that conform to fill gaps and keep insects out. ***Style 5*** has a rubber insert that compresses to hold the sweep tightly against the floor. ***Style 6*** has a drip cap.

Wrap-Around Door Bottom Seals

Shut out drafts and protect your door from damage. Seals have an unfinished aluminum flange that wraps around the bottom of the door. They have an arched, flexible vinyl insert and are often used with thresholds (sold separately, see pg. 2880) to completely fill the gap underneath your door. For use on 1¾″ thick doors. All have slotted mounting holes and come with screws. UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Meet UL 10B and UL 10C. Seals ***with drip cap*** have a slight overhang to keep dust, rain, and slush away from the door bottom. ***Style 7*** insert temp. range is –40° to +220° F. ***Style 8*** insert temp. range is –10° to +110° F.

	Insert Size (A)	Flange Ht. (B)	Drip Cap Proj. (C)	Flange Thick.	3-ft. Lengths		4-ft. Lengths

Automatic Door Bottom Seals

To allow greater clearance and save floors from scuffing, door seals automatically spring up when the door is opened. As door is closed, a drop bar on Styles 10-12 starts sealing on the hinge side to prevent the seal from dragging along the floor. The seal fully drops when the door is closed. Style 9 seal simply drops down when the door is closed. All are reversible for left- and right-hand doors.

Door seals work best with metal thresholds (sold separately, see page 2880); they cannot be used with solid vinyl thresholds or thresholds with vinyl seals. All conform to irregular surfaces and uneven floors. Seals have mounting holes and come with screws. When properly installed, ***Styles 10-12*** help you comply with the Americans with Disabilities Act (ADA) requirements for low-closing force.

For Surface Mounting— UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Meet UL 10B and UL 10C. ***Style 9*** can be cut with a power saw down to 24″ in length. ***Style 10*** can be trimmed with a hacksaw up to 4″ off the side opposite the plunger.

For Surface and Half-Mortise Mounting— Seals can be mounted in a cutout on the bottom of the door face, but a portion of the flange will be exposed. All have a thick, heavy duty insert for increased durability. UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Meet UL 10B and UL 10C. ***Seals with neoprene insert*** can be trimmed with a hacksaw up to 4″ off the side opposite the plunger. ***Seals with thermoplastic insert*** can be trimmed with a hacksaw up to 2″ off the side opposite the plunger.

For Full-Mortise Mounting— Install into an existing channel in a metal door bottom. Seals have a thick, heavy duty insert for increased durability. UL classified for metal fire doors rated for 3 hours. You can use a hacksaw to trim up to 4″ off the side opposite the plunger.

Floor Thresholds

Make a smooth transition between flooring surfaces. The ***regular duty*** thresholds are good for light to moderate foot traffic. ***Heavy duty*** thresholds are made of thicker material to stand up to heavy foot traffic and traffic from motorized vehicles such as forklifts.

Thresholds are often used with door bottom sweeps or door bottom seals (sold separately, see page 2879) to completely fill the gap underneath your door. ***Styles 4-7*** have a vinyl insert to seal out weather; they can be used alone or with a door bottom sweep or seal. ***Styles 4-7, 9,*** and ***10*** are not compatible with the Automatic Door Bottom Seals on page 2879.

Thresholds do not have a finish. All have mounting holes and come with screws, unless noted. Thresholds with a ribbed top provide slip resistance.

When properly installed, ***Styles 1-4*** and ***Styles 8-10*** help you comply with the Americans with Disabilities Act (ADA).

Styles 1-5 and ***Style 8*** are UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. They meet UL 10B. ***Styles 1, 2, 3, 5,*** and ***8*** meet UL 10C, unless noted.

To Order: Please specify length: 3, 4, or 6 ft. where applicable.

3 Aluminum with Ribbed Top and Nonskid Surface— A nonskid coating embedded into the metal allows the thresholds to retain slip resistance even when exposed to oil and grease.

4-6 Regular Duty Aluminum with Ribbed Top and Vinyl Seal— Thresholds are aluminum with a vinyl insert that creates a seal when the door is closed. *Style 4* threshold is compatible with any door, including those with a vertical-rod (panic) exit device. *Style 5* is offset for uneven surfaces.

7 Regular Duty Adjustable-Height Aluminum Ribbed Top with Vinyl Seal— Made of aluminum with a vinyl insert that presses against the bottom of your door for a tight seal. Threshold offers six height levels.

8 Heavy Duty Aluminum with Ribbed Top— Assembles in three pieces: two 0.094″ thick end pieces and one 0.250″ thick ribbed top plate. Ideal for covering concrete seams and expansion joints. This style does not have mounting holes; drill your own where necessary.

9&10 Heavy Duty Solid Vinyl— Thresholds resist marring and wear. Their ½″ overall height tapers to ¼″ at the edges. Thresholds do not have mounting holes; install with contact cement (sold separately, see page 3420). *Style 9 half threshold* is for use between floors of different heights. *Style 10 full threshold* is for use between floors of equal height.

ADA-Compliant Floor Ramps

When properly installed, these ramps can help you comply with the Americans with Disabilities Act (ADA). Ramps are made of aluminum.

Ramps have a ribbed surface and are 0.110″ thick. All have 9″ wide closed-end sides and come with wood screws and instructions. UL classified for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Meet UL 10B and UL 10C.

Flush Ramps— For entries and doorways raised ¾″. Ramps fit snug against your threshold or raised entry.

Overlap Ramps— For entries and doorways raised ½″. Ramps have a 3″ overlap of threshold or raised entry.

For Door Wd.

Floor Edge Protectors

Protect the edges of flooring from damage caused by foot traffic. All are aluminum with mounting holes.

Style 11— Covers edges of two adjacent flooring materials. All have a clear anodized finish. Furnished with screws.

Style 12— For one edge of carpet or flooring material. Protector has a polished finish. Requires #4 screws (not included) for mounting.

Dock Door Shelters

Protect your loading dock from the elements. Shelters fit dock doors with openings from 8-10 ft. Wd.×8-10 ft. Ht. You can use them to reduce oversized door openings to match trailer openings. Shelters consist of two side flaps and one top flap. All flaps are 40-oz. black nylon-reinforced vinyl. Mounting hardware not included.

Fixed

Fixed Shelter—Perimeter covering is 18-oz. white translucent vinyl with extruded aluminum trim. Shelter has two 21″ Wd.×10 1/2-ft. Ht. side flaps and one 11-ft. Wd.×3-ft. Ht. top flap. Side flaps have a 14″ vertical safety-yellow stripe. Shelter includes two steel guide protectors that are safety yellow.

Retractable Shelter—Perimeter covering is 18-oz. black vinyl-coated nylon with extruded aluminum trim. Has two 23″ Wd.×10-ft. Ht. side flaps and one 11-ft. Wd.×3-ft. Ht. top flap. Side flaps have a 22″ vertical safety-yellow stripe. Steel guide protectors are not needed—the frame pushes back to prevent damage if trailers back in off-center.

	Projection		
Fixed	24″	87645T75	$1,322.02
Retractable	24″	87645T76	1,656.13

Base-Mount Overhead-Door Seals

Seals mount to the bottom of your overhead door to close gaps between your door and a threshold or floor. All conform to irregular surfaces and uneven floors.

Vinyl Insert with Aluminum Flange

Insert is vinyl and stays flexible to –30° F. Use to seal 3/4″ gaps. If gap is larger than 3/4″, use with heavy duty thresholds on page 2880. Flanges have mounting holes and come with mounting screws.

The ***9-ft. long*** door bottom is furnished with two 4 1/2-ft. aluminum flanges and one 9-ft. rubber insert. The ***18-ft. long*** door bottom is furnished with four 4 1/2-ft. aluminum flanges and one 18-ft. rubber insert.

18 ft.	3/4″	1 5/8″	3/8″	0.060″	10505A43	53.81

Neoprene Sponge Rubber

Neoprene is less flexible than vinyl and withstands temperatures from –22° to +302° F. Use to seal 5/8″ gaps. If gap is larger than 5/8″, use with a heavy duty floor threshold (sold separately, see page 2880). Weatherstripping does not have mounting holes; install with the included nails.

Lg.	Max. Door Gap	Top Wd. (D)	Bottom Wd. (E)	Flange Thick.

Dock Door Seals

When a trailer is backed into place at your open dock door, these seals create an energy-efficient, weather-tight seal between the trailer and your dock. Good for keeping out dust and fumes, seals are for openings with a maximum size of 8 ft. Wd.×8 ft. Ht. Seals consist of two 1-ft. Wd.×8-ft. Ht. side pads and one 10-ft. Wd.×1-ft. Ht. top header pad. Side pads have a 24″ vertical safety-yellow stripe. All pads are foam covered with 36-oz. black nylon-reinforced vinyl that's bonded to pressure-treated wood. Mount seals to your dock wall using the included brackets and wood lag screws.

Note: Choose a dock seal that projects a maximum of 5″ beyond your dock bumper. If your dock has an edge-of-dock leveler, order the dock seal with a 20″ projection.

UL Fire-Rated Steel Doors

Plain

Window Options

Square Glass

Rectangular Glass

Half Glass

All of these steel doors are UL fire-rated and labeled with an hourly fire protection rating. Doors are 1¾″ thick with a solid polystyrene core and gray primer finish. All are reinforced at the top on the hinge side (to support a door closer; see pages 2914-2917). Install as either a left- or right-hand door.

Doors come prepared for three hinges (unless noted) and door hardware. All accept 0.134″ thick or 0.180″ thick, 4½″×4½″ standard hinges. They also come prepared for a cylindrical lockset with 2¾″ backset (the distance from the edge of the door to the center of the lockset's mounting hole). For hinges, hardware, and frames, see page 2883. Please see illustration at right for exact hinge and lockset cutout locations.

Square-glass, rectangular-glass, and ***half-glass*** doors have wire-reinforced clear glass.

Also Available: Additional sizes. Please ask for 14435A999 and specify door opening (Wd.×Ht.), plain or window option (square glass, rectangular glass, or half glass), gauge, hinge location, and lockset location.

Hinge and Lockset Locations

To identify your door style, see the hinge and lockset location table below. Doors are sized to fit UL Fire-Rated Steel Door Frames that have the same style number (frames sold separately, see page 2883); just match the style number and Door Ht.

Quick-Mount UL Fire-Rated Steel Doors

Half Glass Right-Hand Door (With Included Sub-Frame)

Easy-to-install replacement doors come hung in a sub-frame that anchors into your existing frame. Doors are UL fire-rated and made of zinc-coated galvanized steel with steel internal reinforcements and a gray primer finish. They are 1¾″ thick and have 4½″×4½″ stainless steel ball-bearing hinges with a removable pin and a dull brushed finish. All include a door closer, a door bottom sweep, weatherstripping, a threshold, and mounting hardware.

Doors are handed; you choose either a left-hand or a right-hand door. To determine the handing of your door, stand on the side of the door where the door swings away from you (the push side). If it opens to the left, it's a left-hand door; if it opens to the right, it's a right-hand door. ***Plain doors*** have a mortise lever lockset (cylinder lock is on the pull side of the door). Locks are keyed differently and come with two keys. ***Rectangular-glass*** and ***half-glass doors*** have a touch bar exit device (on the push side of the door) and a lever and a cylinder lock (both on the pull side of the door). Locks are keyed differently and come with two keys. Doors come with a clear ceramic glass window.

To Order: Please specify left or right hand for all doors.

■ Please see UL Fire-Rated Steel Doors on this page for window illustrations.

UL Fire-Rated Steel Door Frames

Made of 16-ga. cold-rolled steel, frames are sized to fit the UL Fire-Rated Steel Doors on page 2882 that have the same style number; just match the style number and Door Ht. Frames are prepared to accept three (unless noted) 0.134″ thick or 0.180″ thick, 4½″×4½″ hinges and a 4⅞″ strike. All have a 2″ face and are reinforced to support a door closer (sold separately, see pages 2914-2917). Shipped unassembled.

Frames are handed; you choose a frame for either a left-hand or a right-hand door. To determine the handing of your door, stand on the side of the door where the door swings away from you (the push side). If it opens to the left, it's a left-hand door; if it opens to the right, it's a right-hand door.

Flush frames are for use in new and existing masonry (brick or block) walls and in instances where the door frame is installed before drywall is in place. Not for use in existing drywall. They have a 5¾″ overall depth to fit a min. 4⅞″ thick wall. Rough opening will be about 4½″ wider and 2¼″ higher (±⅛″) than the door opening dimensions. Come with multipurpose and masonry wire anchors. Fire rated for three hours.

Wrap-around frames are for use where drywall or other material has been hung; they are only for existing walls. All have a 5⅞″ overall jamb depth to fit a maximum 4⅞″ thick wall. Rough opening is about 2¼″ wider and ⅞″ higher (±⅛″) than the door opening dimensions. Furnished with a compression bar anchor installed in the frame. Fire rated for 1½ hours.

Also Available: Additional sizes. Please ask for 1518A999 and specify door opening size (Wd.×Ht.), frame type (flush or wrap-around), handing (left or right), and hinge locations.

★ Prepared for four hinges.

Right-Hand Door Frame

UL Fire-Rated Steel Double Doors and Frames

You'll find these have the same specifications as the steel doors and door frames on this page and the previous page, but in a double-door style. Doors are prepared to accept cylindrical locks and are reinforced to support closers and surface bolts. Install as either left- or right-hand doors. Door hardware and mounting hardware sold separately on this page. Furnished with flat bar weatherstripping to provide a continuous seal between doors. UL fire rated.

Flush frames are for use in new and existing masonry (brick or block) walls and in instances where the door frame is installed before drywall is in place. Not for use in existing drywall. They have a 5¾″ overall depth to fit a minimum 4⅞″ thick wall. Rough opening will be about 4½″ wider and 2¼″ higher (±⅛″) than the door opening dimensions. Furnished with multipurpose and masonry wire anchors. Fire rated for three hours.

Wrap-around frames are for use where drywall or other material has been hung; they are only for existing walls. All have a 5⅞″ overall jamb depth to fit a maximum 4⅞″ thick wall. Rough opening is about 2¼″ wider and ⅞″ higher (±⅛″) than the door opening dimensions. Furnished with a compression bar anchor installed in the frame. Fire rated for 1½ hours.

Hardware sold separately on this page.

Door Lockset, Strike, and Hinge Sets

Outfit the steel doors on this page and on pages 2882 and 2884. Each set includes a cylindrical Schlage lockset; a standard ANSI 4⅞″ high strike; and 0.134″ thick, 4½″×4½″ full mortise ball bearing template hinges with screws (see page 2986 for information about mortise-mount template hinges). All are reversible for left- and right-hand use. Backset is 2¾″ (the distance from the edge of the door to the center of the lockset's mounting hole).

On ***passage function*** locksets, both knobs/levers are always free turning. Locksets are nonlocking and have a spring latch. ***Entrance function*** knob/lever locksets have a deadlocking latch, a keyed cylindrical Schlage "C" keyway lock on the outside, and a turn button on the inside. Both knobs/levers are free turning until the turn button locks the outside knob/lever. Sets are keyed differently and come with two keys.

See pages 2906-2909 for locksets with other functions and page 2986 for additional hinge selections.

Quick-Mount Stainless Steel Doors

Left-Hand Door

All of these doors come hung in a sub-frame that you anchor into your existing frame. Because both the doors and frames are made of stainless steel, units are well-suited for corrosive and high-moisture environments as well as clean rooms and laboratories.

Units are not fire rated (nonlabeled) but have full-perimeter weatherstripping and full thermal break (a channel filled with a high-density polyurethane foam that completely separates the inside and outside panels).

Frames are 16-ga. stainless steel and 3½″ wide; doors are lightweight 24-ga. stainless steel.

Choose from left- and right-hand doors. To determine the handing of your door, stand on the side of the door where the door swings away from you (the push side). If it opens to the left, it's a left-hand door; if it opens to the right, it's a right-hand door.

All doors are 1¾″ thick and come with 0.125″ thick, 4″×4″ stainless steel ball bearing hinges and an adjustable strike plate. Doors are prepared to accept either a knob or lever cylindrical lockset (not included; see page 2906) with a 2¾″ backset (the distance from the edge of the door to the center of the lockset's mounting hole).

Type 316 stainless steel doors provide greater corrosion resistance.

One-Way Security Door Viewers

A

B

You can see out, yet no one can see in. Installation is easy; just drill a hole in your door and insert a viewer. All have optical glass lenses and are UL listed for use on fire doors rated up to 1½ hours. Made of solid brass. ***Style A*** viewers require a ½″ dia. mounting hole. ***Style B*** viewers require a 9/16″ dia. mounting hole.

Blank Steel Doors

Start with a blank canvas—doors are similar to the 14435A steel doors on page 2882, except they are not prepared for hinges and locksets and are not fire rated (nonlabeled). Use standard shop tools to customize doors to fit your existing frame and door hardware.

Doors are 1¾″ thick with a solid polystyrene core and gray primer finish. All are reinforced at the top to support a door closer (see pages 2914-2917). Instructions are included. For door hardware, see 1899A and 10275A on page 2883. Use an ***optional continuous hinge*** (sold separately below) to reduce door sag and deflection.

Doors

36″×84″	14515A91	485.25

Optional Continuous Hinge

Mount the blank doors above with this anodized aluminum geared continuous hinge. Designed for easy installation, it minimizes door sag and deflection. It's 83″ long and has a maximum capacity of 320 lbs.

Hinge has punched and countersunk holes and comes with snap-on security molding and mounting screws. Minimum clearance between jamb and door is 1/32″.

For more information about load-rated aluminum geared hinges, see page 2982.

1382A23 ..... $242.64

Door Window and Frames

See what's on the other side of the door before you open it. For use in 1¾″ thick doors.

Window with Glass

Window frame is 18-ga. cold-rolled steel with a gray primer finish and corrosion-resistant sealer. Viewing window is ½″ thick clear polycarbonate. Furnished with hardware and 2.8 oz. tube of silicone glazing.

Viewing Area, Wd.×Ht.	Rough Opening, Wd.×Ht.		
6″×6″	9″×9″	3903A24	$151.71

Frames without Glass

Made of 20-ga. cold-rolled steel with a gray primer finish, these frames are UL listed and accept ¼″ thick glass (not included).

Note: Actual glass size should be 1″ wider and higher than viewing area listed. (Glass not included.)

Viewing Area, Wd.×Ht.	Rough Opening, Wd.×Ht.

Heat-Resistant Observation Windows

Monitor the contents of tanks, silos, and other vessels, or simply see what's on the other side of a door. Windows are not rated for pressure. They are made of ¼″ thick borosilicate glass with a temperature range of –20° to +446°F. All have a bolt-on mounting flange that's made of ⅛″ thick carbon steel with a rust-resistant gray painted finish. Furnished with a mounting flange gasket. Mounting hardware not included.

Clear Flexible Vinyl Swinging Doors

You can see right through these 1/8″ thick clear PVC doors. Their clarity makes them a good alternative to strip doors. All are double-door style and have PVC strips at the top to ensure a proper seal. Suitable for USDA-inspected facilities. Furnished with two heavy duty cast aluminum hinges, mounting hardware, and instructions. Temperature range is 20° to 160° F.

Aluminum Swinging Doors

Double-Door Style

Made of tempered, 0.063″ thick aluminum alloy, doors are light in weight and open with a slight push. They gently close behind you via a gravity hinge. Doors are durable yet semiflexible to absorb initial impact. All have a dull anodized finish. Each door has a clear acrylic window that is secured with black rubber molding.

Doors mount flush to the jamb with 3/8″ clearance between the hinge and the jamb as well as 3/4″ clearance above, below, and between doors. The lower hinge bracket usually mounts to the floor, but it can be mounted on the jamb to allow extra space below the doors. Mounting hardware (included) includes a reinforcement bracket that extends 6″ from the jamb. Furnished with instructions.

Single-Door Style— Reversible for left- and right-hand doors.

Also Available: Additional sizes. Please ask for 8138A999 and specify single- or double-door style, door opening size, and window size.

Swinging Divider Gates

Double Gate

Use gates to separate areas where you don't need a full-size door. Push gates open and a gravity hinge returns them to the closed position. For indoor use.

Overall thickness is 3/4″. Gates have a polypropylene core with an 1/8″ thick ABS thermoplastic outer layer for impact resistance. All have a gray textured finish. Surface or jamb mount. Furnished with mounting hardware and instructions.

Single Gates— Reversible for left- and right-hand mounting.

Double Gates— Have a padlock hasp so you can lock the gates together at the center. Hasp accepts up to a 1/2″ dia. shackle (padlock not included, see pages 2932-2944).

Top-Hinge Flexible Swinging Doors

Double-Door Style

Doors flex and open when they're hit, then return to their closed position. Each door has a gravity hinge that attaches to an existing door frame at the top of the jamb—this allows you to swing the door up and out of the way.

Lightweight yet tough, doors are made of 1/4″ thick opaque PVC. Windows are clear 1/4″ thick PVC so you can see traffic on the other side. Suitable for USDA-inspected facilities.

Hinges are zinc plated and have 3/8″ dia. mounting holes (fasteners not included). You can trim doors with shears or a utility knife to accommodate uneven floors. Furnished with instructions. Temperature range is –10° to +150° F.

Note: Not recommended for door frames that are 5″ thick or more.

Single-Door Style— Reversible for left- and right-hand doors.

Double-Door Style— Panels overlap 2″ at the center of the doors so you can trim them to fit out-of-square openings.

Also Available: Additional sizes. Please ask for 1027A999 and specify single- or double-door style, door opening size, and gray or forest green color.

Extra Heavy Duty Swinging Doors

Double-Door Style

Built tough to handle daily forklift traffic, doors are 1 7/8″ thick and have one-piece molded construction with steel internal reinforcements. All have a light gray polyethylene outer skin and 42″ high polyethylene bumpers that project 4″ from the door surface both front and back. Doors have an insulated, urethane-filled core that can withstand refrigeration applications with temperatures down to –40° F. They're also ideal for washdown applications.

Each door has a recessed, abrasion-resistant, 1/8″ thick clear polycarbonate window with black frame. Gravity hinges control the door as it closes. Gasketing on door perimeter offers an effective seal. Furnished with mounting hardware and instructions.

Single-Door Style— Reversible for left- and right-hand doors.

Curved Polyethylene Door Bumpers

Protect doors from cracks and scratches resulting from contact with objects and vehicles. Made of polyethylene, bumpers (shown on the Extra Heavy Duty Swinging Doors on this page) have a small amount of "give"; the curve in the bumper projects from your door and absorbs the force of the impact. Bumpers have mounting holes and surface mount to door. Furnished with mounting hardware. Temp. range is –40° to +180° F.

Note: We recommend choosing a bumper with a width that is at least 2″ narrower than the overall width of your door. This will prevent the bumper from interfering with the opening and closing of your door.

Folding Gates

Note: Single and biparting gate height drops 6″ when fully extended.

Single Gate, 7 ft. wide and wider (Extended)

Biparting Gate, less than 14 ft. wide (Extended)

Window Gate (Extended)

Control access to selected areas without sacrificing visibility and air circulation. Folding gates are great for corridors, docks, windows, and doorways. All have a galvanized steel universal bracket that allows them to be surface or jamb mounted. When not in use and fully retracted, gates can swing out of the way, leaving you an unobstructed path. Gates come with mounting instructions and a padlock hasp that accepts up to a 5/8″ dia. shackle (padlock not included; see pages 2932-2944). For indoor and outdoor use.

Steel Gates— Have a galvanized finish for corrosion resistance. Frame is made of 12-ga. 1½″ × 1½″ angles. Mesh has a criss-cross design; it's made of 14-ga. ¾″ Wd. × ⅜″ Dp. U-channels that are riveted back-to-back with aluminum rivets.

Aluminum Gates— Lighter in weight than steel gates with greater corrosion resistance. Frame is made of 15-ga. 1½″ × 1½″ angles. Mesh has a criss-cross design; it's made of 14-ga. ¾″ Wd. × ⅜″ Dp. U-channels that are riveted back-to-back with aluminum rivets.

Single gates mount left and lock on the right (right side is determined by facing the gate from the outside). They have a 2″ dia. steel caster and a ⅛″ thick locking bar. Gates 7-ft. wide and wider have a lockable support bolt in the center of the gate for extra stability; support bolt has a padlock hasp that accepts up to a ½″ dia. shackle (padlock not included, see pages 2932-2944).

Biparting gates mount on each side of the doorway and lock together in the center. They come with two 2″ dia. steel casters. Gates 14-ft. wide and wider have a lockable support bolt on each half of the gate for extra stability; support bolts have a padlock hasp that accepts up to a ½″ dia. shackle (padlock not included, see pages 2932-2944). To mount biparting gates adjacent to existing overhead door rails, order a pair of extension brackets, sold separately below.

Window gates mount on the left or right side. *Note:* Gate height drops 1″ per linear foot when extended. For example, 31″ height drops to 28″ high when extended to cover a 3-ft. wide opening.

★ Gate height drops 1″ per linear foot extended.

Extension L-Brackets

Allow biparting gates to clear overhead door rails and other obstacles. Brackets project 9″ from the wall and provide 7¼″ of clearance. Made of galvanized steel. Furnished with bearing washers.

6751T44 ..... **Pair** $68.72

Portable Folding Gate

Portable Gate ***Add-On Unit***

Here's a portable way to control access. Gate has six 3″ dia. rubber casters on 28″ axles, so it's easy to roll anywhere. All casters have side wheel brakes. To store, simply retract gate and roll it into a closet or lock it to a wall. Gate has a padlock hasp that accepts up to a 5/8″ dia. shackle (padlock not included; see pages 2932-2944).

Frame is made of 12-ga. galvanized steel angles (1½″ × 1½″). Mesh has a criss-cross design; it's made of 14-ga. galvanized steel U-channels (¾″ Wd. × ⅜″ Dp.) that are riveted back-to-back with aluminum rivets. The galvanized finish on this gate gives it corrosion resistance for indoor and outdoor use. ***Add-on unit*** bolts to end of gate to add up to 6 feet of width. Includes two casters and hardware to bolt it to the gate.

Rolling Curtain Overhead Steel Service Doors

Doors have few moving parts, so little maintenance is required. All are made of roll-formed 26-ga. galvanized steel sheeting that's primed white on both sides for extra corrosion protection. Doors have felt wear strips on the curtain to provide smooth, quiet operation. Bottom bar is extruded aluminum with a full-length steel angle that provides reinforcement; bar also has weatherstripping to seal the gap between the door and the ground. Tracks and guides are 14-ga. steel. Furnished with a slide bolt you can add to the interior side of the door for extra security. For indoor and outdoor use.

Mount doors on the inside of the wall on wood, steel, or masonry jambs. You can mount chain-operated or rope-operated controls on either the left or right side. Door curtains are assembled and include chain (rope for 1200A61), mounting hardware for steel jambs, a set of guides that you attach during installation, and instructions.

Chain Operated— Requires little force to open and close and can be opened to intermediate heights.

For electric roll-up openers, see page 2918.

Also Available: Additional sizes. Please ask for 1200A999 and specify width and maximum height of door opening, required ceiling clearance, and chain operated or rope operated.

Shown with control mounted on right side.

Adapter Kit with #41 Chain Sprocket Gear— When using an automatic door operator (jackshaft) with the doors listed at left and above, you must also order this kit. Includes gear sprockets.

1200A91 ..... $86.54

Track-Mounted Accordion Doors and Room Dividers

Partition rooms to create temporary private space. Each door comes with track, handles, and hardware (all color-matched), plus installation instructions. Doors are single-door style and have a handle on one end to open and close the door. For indoor use.

Vinyl— Made of rigid vinyl, doors have self-mating integral hinges, PVC posts, and interlocking jamb molding. All come with a magnetic latch. You can easily trim doors with a fine-tooth hacksaw to fit the height of your opening.

Premium Vinyl Laminated— These durable doors have a fiberwood core, steel hinges, aluminum posts, and aluminum interlocking jamb molding. They also have ball bearing wheels and a thumb-turn latch that operates from either side of the door.

Also Available: Custom vinyl doors. Please ask for 8449A999 and specify single- or double-door style. (Double door is split in the middle, mounts to both sides of the opening, and has a handle on each side to open and close that side.) Also specify width, height, and color (white, dark brown, or tan).

Also Available: Custom premium vinyl laminated doors. Please ask for 10265A999 and specify single- or double-door style. (Double door is split in the middle, mounts to both sides of the opening, and has a handle on each side to open and close that side.) Also specify width, height, and color (white, walnut, or light oak).

Overhead Screen Doors

Leave your dock doors open to let light and fresh air into your facility while keeping insects out. Screens are made of an open weave, blue vinyl-coated polyester mesh that resists mildew, stains, and ultraviolet light. Mesh has 17 × 11 openings per sq. in. and is suitable for USDA-inspected facilities. All the screens have ¾″ dia. rods in yellow vinyl pockets spaced 2 ft. to 3 ft. apart for extra support.

Screens come with a 3″ dia. roller tube; roller tube mounting brackets; 1″ Wd. × 4″ Dp. × ⅛″ Thick. aluminum C-channel track; guide track mounting brackets; and top, bottom, and side seals. Mount inside the door jamb.

Manually Operated— Have a spring-loaded roller tube that allows you to lift and lower the screen.

Motor Powered— Has a single-phase, 115 VAC motor in the roller tube and a 6′9″ power cord with three-prong plug. Furnished with a wall switch.

Insulated Extra-Large Access Door

Great for ducts and equipment housings, doors are filled with 1″ of fiberglass insulation and are rated for static pressures up to 4.5″ water gauge. Maximum temperature is 125° F. Door panel is made of 24-ga. galvanized steel. Door panel frame and mounting frame are made of 0.06″ thick extruded aluminum. Mounting frame has a 1⅜″ wide flange and neoprene gasketing.

Doors have a zinc-plated steel continuous hinge that is reversible for left- and right-hand mounting. Handles are shipped loose for attaching during installation. There are working handles on both sides of the door. Drill mounting holes in the mounting flange or door frame and surface mount the door (fasteners not included). Opening should be framed to provide support.

Recess-Mount Metal Access Doors

Standard

Standard with Key Lock

Tight Seal

Fire Rated

Drywall

Insulated

Gain easy access to pipes, pumps, electrical wiring, and other controls. Doors have frames that recess into walls and ceilings. The frames have mounting holes; fasteners are not included. All doors have a flange that hides the edge of a rough opening. ***Steel*** doors have a gray primer finish. ***Type 304 stainless steel*** doors and ***aluminum*** doors have a dull finish.

Standard— Can be installed in masonry, tile, plaster, drywall, metal, and wood. Doors have a concealed continuous hinge and flush-mounted, screwdriver-operated cam latches. **Also Available:** Additional door sizes. Please ask for 8143A2 for steel or 8450A999 for stainless steel and specify door size (height × width).

Standard with Key Lock— Doors have a five-pin cylinder lock and come with two keys. Locks are keyed alike (each lock opens with the same key). Can be installed in masonry, tile, plaster, drywall, metal, and wood. All have a concealed continuous hinge.

Tight Seal— Doors have a 1/2″ thick EPDM gasket to provide a tight seal—great for clean rooms and laboratories. Can be installed in masonry, tile, plaster, drywall, metal, and wood. All have a continuous hinge and a turn-to-latch knob.

Fire Rated— All of these doors contain 2″ of fire-rated insulation. When installed in fire-rated walls and ceilings, doors maintain fire barrier ratings—UL rated for 1 1/2 hours for wall installation; Warnock-Hersey 1-hour combustible and 3-hour noncombustible rating in floors/ceilings (unless noted). Can be installed in masonry, tile, plaster, drywall, and metal. Doors have a continuous hinge and universal latches that have both turn ring and flush key operation. Frames have an interior release latch and anchor straps.

Drywall— For use in walls and ceilings. Doors have a textured frame and a bead flange that allows you to apply enough joint compound to cover the flange. All have a concealed continuous hinge and flush-mounted, screwdriver-operated cam latches.

Insulated— Suitable for interior and exterior applications, doors have 3/4″ polystyrene insulation to protect against moisture and corrosion. Can be installed in masonry, tile, plaster, drywall, metal, and wood. Doors have two concealed pin hinges, except 1369A16 and A17, which have a continuous hinge. All have flush mounted, screwdriver-operated cam latches.

★ Frame is 18 gauge. ▲ For Warnock-Hersey 3-hour noncombustible fire rating in ceilings, increase "fits opening size" dimensions by 1 5/8″ to allow for additional sheetrock that must be added to maintain fire rating. ✓ Not fire rated for ceiling mounting.

Surface-Mount Metal Access Doors

Easy to install, these doors don't require framing, bracing, notching, or cutting of inner wall obstructions. Just cut an opening and surface mount doors to your masonry, plaster, drywall, metal, or wood walls and ceilings. Doors have a continuous hinge, flush-mounted screwdriver-operated cam latches, and a 3/16″ dia. mounting hole in each corner of the flange. Mounting hardware not included.

Steel doors have a gray enamel finish. Frames are the same gauge as the doors. The flanges are 1/2″ wide.

Type 304 stainless steel doors have a dull finish. The frames are 18 ga. The flanges are 1″ wide.

Heavy Duty Security Access Doors

Made of 10-ga. steel, doors have a five-pin cylinder lock and two keys so you can limit access to controls. Locks for each door size are keyed alike (all open with the same key). All doors have one latch and recess mount into masonry, tile, plaster, drywall, metal, and wood walls. For interior use. Butt hinges are welded to the door and frame for extra security. Frames are 6-ga. angle iron with welded-on heavy duty steel masonry anchors for secure mounting to brick walls. Doors have a gray powder-coated finish for corrosion resistance. Drill holes to mount. Mounting hardware not included.

Self-Closing Fire-Rated Access Door

Commonly used as an intake door on a trash chute, this wall-mount door has a gas spring for automatic closing and a T-handle lock with two keys. Door is made of 20-gauge, Type 304 stainless steel and has a dull finish. Door liner is 18-ga. galvanized steel. Recess mount into a wall. Mounting frame has a 1 1/2″ flange on each side and a 1 1/4″ flange on the top and bottom. Install with eight #10 fasteners (not included). Door is UL rated for 1 1/2 hours when installed in a fire-rated wall.

Plastic Access Doors and Hatches

Surface/Flush-Mount Door

Doors and hatches are 1/8″ thick plastic.

Access Doors— The frame doesn't have holes. Attach doors with adhesive, or drill holes where needed. All have a snap friction catch that opens easily using the tip of a screwdriver. Doors have a textured surface that can be painted or wallpapered. Mount in walls and ceilings. Color is white.

Surface-mount access doors are made of styrene plastic and have a pivot hinge so they can be removed from the frame. Can be installed in masonry, tile, plaster, drywall, metal, and wood.

Surface/flush-mount access doors are made of ABS plastic and have snap-out doors (no hinges). Surface mount to wall, or reverse the frame and mount so the flange is inside the wall, making the door flush with the wall. Can be installed in tile, plaster, drywall, and wood. Doors 1243A61, 1243A62, and 1243A63 have knockouts to accommodate wiring or 1/4″ water lines.

Hatch

Access Hatch— Surface mount this polypropylene hatch to plaster or drywall. Simply slide the latch to open and close. Color is off-white. Requires five #5 screws (not included) for mounting.

Tight-Seal Access Hatches

Styles A-D surface mount and provide quick and easy access to drains, hoses, wires, and valves. Styles A-C do not include mounting screws. Style D comes with mounting screws. Style E hatches recess into insulation surrounding pipes and other vessels.

Styles A&B— Hatches have a nonskid surface, a removable lid, a T-latch, and an EPDM rubber gasket. *Style A* is polypropylene and has a weathertight seal. Color is off-white. *Style B* is cast aluminum for corrosion resistance and has a watertight, airtight, and dustproof seal.

Style C— Made of polypropylene, hatches have a recessed slam latch (pull to open and slam to shut). All have a neoprene/EPDM gasket for a weathertight seal. Color is white.

Style D— Hatches have two snap latches, a gray polycarbonate frame, and a transparent polycarbonate window that's smoked for UV resistance. All have an EPDM rubber gasket to create a watertight, airtight, and dustproof seal. Temperature range is –40° to +175° F.

Style E— Made of silicone, hatches are used in refineries and chemical plants for inspecting insulated pipes and other vessels for corrosion. Recess mount in smooth, embossed, or corrugated insulation that is at least 1″ thick. Locking ridges keep the sealing flange secure in the opening—no screws or caulk required. Lid fits snugly for a watertight seal; just pull to open. Hatches conform to uneven surfaces and imperfect cutouts. Silicone is heat- and chemical-resistant. Max. temp. is 500° F. Color is gray.

Weld-On Inspection Hatches

Rectangular with Two Latches

Round with One Latch

Weld hatches in place to create dustproof and rainproof points of access.

Rectangular Hatches—Commonly used for inspecting processing and handling equipment. Hatches have a polyethylene gasket and accept padlocks with up to a 5/16″ dia. shackle (padlocks not included, see pages 2932-2944). *Steel hatches* have a gray primer finish for corrosion resistance and chrome-plated steel latches. *Type 304 stainless steel hatches* have Type 304 stainless steel latches.

Round Hatches—Commonly installed on the deck or top of a tank. Hatches have a Buna-N gasket and accept padlocks with up to a 1/4″ dia. shackle (padlocks not included, see pages 2932-2944). *Steel hatches* are unfinished and have steel latches. *Type 304 stainless steel hatches* have Type 304 stainless steel latches.

Floor and Sidewalk Access Hatches

Designed for new installation in concrete, hatches have a 1/4″ concrete anchor flange; they are not for retrofit installation. Hatches are 1/4″ thick diamond tread textured aluminum and hold a load of 300 lbs./sq. ft. Frames are made from 1/4″ thick unfinished aluminum channel. All have a 1 1/2″ NPT female drainage coupling. Hatches lock when slammed closed. Unlock from above using the included key; unlock from below using the latching handle. An automatic locking arm holds the lid open at a 90° angle. There is a cast aluminum lifting handle on the outside that lays flat when hatch is closed. Butt hinges and hardware are Type 316 stainless steel.

Roof Hatches

Access your roof easily and quickly. Simply unhook the latch and give the lid a gentle push—springs raise the lid smoothly. A hold-open arm automatically locks in the raised position; close the lid with one hand once you're on the roof.

Hatches have steel butt hinges, a latching handle inside, a push-button release outside, foam rubber weather seal, and a padlock hasp on the inside and the outside. Both hasps accept up to a 1/2″ dia. shackle (padlocks not included, see pages 2932-2944). Cover has a 22-ga. galvanized steel liner. Sides have 1″ of insulation. Flange is 4″ wide and has four 7/16″ dia. mounting holes (fasteners not included). Shipped assembled. For telescoping ladder support posts, see 8135T on page 2157.

Galvanized steel hatches are 14-ga. steel; the cover has a gray primer finish for corrosion resistance. ***Aluminum hatches*** are 1/8″ thick. ***Replacement spring and arm set*** includes a compression spring and a hold-open arm.

Also Available: Additional door sizes. Please ask for 8425A999 and specify material and inside opening size required.

Electrically Heated Air Curtains

Digital Touch Pad

Heated air curtains create a wall of warm air, maintaining the temperature inside when your door is opened. In winter, heater setting adds warmth to heated areas; in summer, fan-only setting reduces cool-air loss. Plus, curtains keep out dust, dirt, insects, and fumes. All air curtains have a 1/5-hp, open dripproof motor that is wired to a controller for speed control. To install curtain, simply route your power source directly to the air curtain's wiring compartment. A wall mounting plate is included as well as four 1/4″ inserts in the top cover for suspending the curtains from a threaded rod. Curtains are for indoor mounting only.

Each air curtain includes a programmable touch pad on the underside of the unit. This digital touch pad allows you to change the fan speed and temperature setting, determine the length of time the unit will run when activated, and lock settings so only someone with the code can make changes. Curtains have a heavy-gauge steel and aluminum frame and a dull anodized aluminum shell. Heaters and motors are the same phase, except where noted. UL and C-UL listed.

Optional door switch (sold separately below) can be used with these air curtains to automatically turn them on when a door is opened and off when a door is closed.

To Order: Please specify voltage (see available voltages below).

Unheated Air Curtains

Create a curtain of air to keep out dust, dirt, insects, and fumes while allowing personnel to easily pass through. Air curtains pull in air from the room or surrounding area and produce a fast flow of air down a doorway or other opening. All have directional air vents. Mount to exterior or interior walls. For a wide door, mount two curtains side by side up to 4″ apart.

Air curtains do not include mounting hardware, except for Style A curtains, which are furnished with a steel mounting bracket. ETL listed for indoor and outdoor use. Temperature range is 0° to 120°F.

(A) Plug-In Low Profile— A great choice for entrances, coolers, and in-plant offices where overhead door clearance is limited. Housing is steel with black powder-coating. Curtains have a variable-speed motor switch, 5⁄8″ mounting holes, and a 3-ft. power cord with three-prong plug. Also have a junction box for hardwiring to a door switch.

(B) Standard— Use for plant entrances, receiving areas, and cold-storage rooms. Housing is 20-ga. steel. Curtains have an adjustable air-inlet damper, 7⁄16″ dia. mounting holes, and wire leads for hardwiring.

(C) Industrial— Use over dock doors and as barriers in hospitals, laboratories, and factories. Housing is 20-ga. steel. Curtains have an adjustable air-inlet damper, 7⁄16″ dia. mounting holes, and wire leads for hardwiring. *Three-phase air curtains* require motor control panel (sold separately below).

(D) Type 304 Stainless Steel— All the benefits of Style C curtains, plus a Type 304 stainless steel housing that can handle corrosive and high-moisture environments. Motor can withstand washdowns. If you want to use a door switch with these curtains, choose a washdown door switch (1345A95 sold separately below). All curtains have an adjustable air-inlet damper, 7⁄16″ dia. mounting holes, and wire leads for hardwiring. CSA certified.

Door Switches

Automatically turn air curtain on when the door is opened and off when the door is closed. Door switches are made of steel.

For Styles A-C Air Curtains— Rated for 20 amps. For use with Styles A-C single-phase and Style C three-phase air curtains. Door switch requires a motor control panel (sold separately above) when used with a three-phase air curtain.

For Style D Air Curtains— Rated for 22 amps. For use with Style D single-phase air curtains. 1345A68 and 1345A78 can be used with a motor control panel (1345A91 sold separately above). Meets NEMA 1, 3, and 4 as well as IP66.

Vinyl Strip Doors

Standard with Smooth Strips

With Bolt-On Mounting Hardware

With Press-On Mounting Hardware

Don't want to spend time hardwiring an air curtain? Vinyl strip doors are a simple way to maintain room temperature and seal out dust, dirt, and debris while still providing access for personnel and vehicles. The strips overlap each other to minimize gaps and maximize the effectiveness of the seal. Strips come in a variety of widths—narrow strips are easier for people to pass through while wider strips offer a better seal.

All strip doors include mounting hardware for hanging strips, vinyl strips with holes punched on 2″ centers, and instructions. Installation fasteners for attaching mounting hardware to your wall or door frame are not included. Bolt-on mounting hardware has ½″ dia. mounting holes. Press-on mounting hardware has ⅜″ dia. mounting holes.

Strip doors ***with bolt-on mounting hardware*** use push nuts (included). Place strips on the mounting studs and install push nuts to hold the strips tightly against the mounting plate.

Strip doors ***with press-on mounting hardware*** install fast and easy. Simply press the strips onto the bullet-shaped pegs, which hold the strips in place.

Standard— For indoor and outdoor use. Temp. range is 0° to 150° F. All have two safety orange vinyl strips for the sides of the opening to show wall location. Color is clear. ***Ribbed strips*** hide scratches and other general wear. **Also Available:** Custom-sized doors with standard vinyl strips. Please ask for 8447A22 and specify door size (width and height in 1-ft. increments), strip width, and smooth or ribbed surface.

Low Temp— For indoor use. Temperature range is –30° to +150° F. Doors can be used in USDA-inspected facilities. The strips are nylon reinforced. Color is clear. **Also Available:** Custom-sized doors with low-temp vinyl strips. Please ask for 8448A999 and specify door size (width and height in 1-ft. increments) and strip width.

Antistatic— For indoor use. Temperature range is 0° to 150° F. Material is non-conductive and virtually eliminates static electricity, dust accumulation, and cling. Charge potential is 5,000 volts per Federal Test Standard 101c, Method 4046. Color is transparent green.

NSF-Certified Vinyl Strip Doors

Make cleanliness a priority. Doors have a polypropylene mounting strip that's suitable for washdown environments. Mounting strip has a one-piece hinge design; strip folds over itself so dust and dirt won't collect on door parts—great for food prep areas. NSF certified. Can be used in USDA-inspected facilities.

Strips are smooth low temp vinyl with 3/8″ dia. holes punched on 2″ centers. All allow for 2″ overlap. Cut to length with shears or a utility knife. Include mounting hardware and instructions. For indoor and outdoor use. Temperature range is –40° to +160° F. Color is clear.

Visibility-Limiting Vinyl Strip Doors

Partially conceal areas as well as seal out dust, dirt, debris, and light. Doors have smooth vinyl strips with 3/8″ dia. holes punched on 2″ centers. Cut strips to length with shears or a utility knife. Furnished with bolt-on mounting hardware and instructions. For indoor and outdoor use. Temperature range is –10° to +150° F.

Opaque Black—Doors completely seal out light. They are not recommended for motorized traffic areas.

Dark Amber—Doors limit visibility and are ideal as welding curtains.

Mesh Strip Doors

Allow air to circulate while keeping out insects, birds, and debris. Made of vinyl-coated polyester, mesh has 17 × 11 openings per sq. in. and is suitable for USDA-inspected facilities. Doors have 12″ of standard smooth vinyl at the bottom of each mesh strip. Furnished with a gray polymer press-on mounting strip and instructions.

Strips have 3/8″ dia. holes punched on 2″ centers. All allow for 2″ overlap. Cut to length with shears or a utility knife. For indoor and outdoor use. Temperature range is –10° to +150° F.

To Order: Please specify mesh color, black or yellow.

Conveyor Vinyl Strip Doors

Keep conveyors rolling without losing heated or cooled air through unprotected openings. Made of smooth vinyl, these strip doors are sized to fit conveyor openings. Strips have 3/8″ dia. holes punched on 3″ centers. All allow for 1″ overlap. Cut strips to length with shears or a utility knife. Furnished with bolt-on mounting hardware and instructions. For indoor and outdoor use. Temperature range is –10° to +150° F. Color is clear.

Ready-to-Hang Strips

Keep your strip doors working efficiently by replacing worn or damaged strips. You can also create a custom strip door; just combine the strips below (except Conveyor strips) with the universal mounting hardware on page 2894. Cut strips to length with shears or a utility knife. Strips have 3/8″ dia. holes on 2″ centers, except holes in Conveyor strips, which are on 3″ centers. Strips are for indoor and outdoor use, except Low Temp and Antistatic strips, which are for indoor use.

Standard—Made of vinyl. Temperature range is 0° to 150° F. *Ribbed* strips hide scratches and other general wear.

Low Temp—Made of vinyl. Can be used in USDA-inspected facilities. Temperature range is –30° to +150° F.

Antistatic—Made of vinyl. Nonconductive to virtually eliminate static electricity, dust accumulation, and cling. Charge potential is 5,000 V per Federal Test Standard 101c, Method 4046. Temperature range is 0° to 150° F.

Visibility Limiting—Made of vinyl. Temperature range is –10° to +150° F. *Opaque black* strips completely seal out light. They are not recommended for motorized traffic areas. *Dark amber* strips limit visibility and are ideal for use as welding curtains.

Ultra-High Temp—Ideal barrier for furnace conveyor entrances and exits, or any opening to a high temperature area. Material is flame-retardant silicone-coated fiberglass that resists water, oil, and chemicals. Temperature range is –65° to +500° F.

Mesh—Made of vinyl-coated polyester mesh. Temperature range is –10° to +150° F.

Conveyor—Made of vinyl. Strips are sized to fit conveyor openings. Temperature range is –10° to +150° F.

Vinyl Strip Rolls

Replace worn-out strips or create your own custom strip door. Simply cut rolls to desired length and punch holes to hang, or choose Standard Ready-to-Hang rolls, which have strips in specific lengths with punched holes. Mounting hardware not included (sold separately on this page). Standard, Antimildew, Anti-Insect/Antiglare, and Standard Ready-to-Hang rolls are for indoor and outdoor use. Low Temp and Antistatic rolls are for indoor use.

***Low Temp*—**Material is suitable for USDA-inspected facilities.

***Antistatic*—**Nonconductive and virtually eliminates static electricity. Charge potential is 5,000 V per Federal Test Standard 101c, Method 4046.

***Antimildew*—**Has a UV inhibitor and a biocide that prevents the growth of microorganisms.

***Anti-Insect/Antiglare*—**Restricts the ability of insects to detect heat and light. Also reduces daytime glare while allowing limited visibility.

***Standard Ready to Hang*—**Rolls are scored into strips (cut 85% through the thickness) and have 3/8″ dia. holes punched on 2″ centers.

Strip Door Mounting Hardware and Accessories

Combine mounting hardware below with rolls or strips (not included, see this page and pg. 2893) to create customized strip doors. ***Universal mounting hardware*** and ***continuous hinge mounting hardware*** have mounting studs that fit strips with 3/8″ dia. holes on 2″ centers. Hardware has 1/2″ dia. mounting holes (3/8″ dia. holes for 1012A and 8460A) for mounting to a wall or inside a door frame. Installation fasteners not included.

Universal Mounting Hardware

Bolt On

Press On

Bolt-on mounting hardware includes mounting plate, face plate, and threaded bolts to hold strips (not included) in place between the mounting plate and the face plate. ***Press-on*** mounting hardware includes a mounting plate with bullet-shaped pegs. Simply press strips (not included) onto the pegs, which hold the strips in place.

Lg.	Aluminum		Galvanized Steel		Type 304 SS

Galvanized Steel Continuous Hinge Mounting Hardware

Just like bolt-on mounting hardware above, except with a continuous hinge. Mount top leaf to a wall or door frame. Attach strips (not included) to bottom leaf. The bottom leaf moves with traffic, reducing pulling stress on the strips.

Galvanized Steel Roller Track

Strips and Strip Door Mounting Hardware Not Included

Turn your strip doors into sliding doors—track allows you to slide doors completely out of the door opening. Furnished with galvanized steel track with mounting brackets, hangers for holding a strip door, and end stops. Hardware is for wall mounting (above door opening). Hangers accept strip door mounting hardware with 1/2″ dia. mounting holes.

■ Track is furnished in multiple sections.

Strip Accessories

***Strip Door Template Kit*—**For cutting roll material into individual strips. Includes a stainless steel template for cutting squared strips and for marking 3/8″ dia. holes on 2″ centers. Template has directions etched into it. Comes with a drill bit for making 3/8″ dia. holes in strip material.

1139A11 ..... $76.74

***Vinyl Strip Cleaner*—**This cleaner removes dust, dirt, and markings. Furnished in a 1-gal. container.

1012A45 ..... $48.52

Cabinet-Door Track Sets

Aluminum Sliding Door Track Set

Plastic Sliding Door Track Set

Steel Roller Door Track Set

For use with bypassing cabinet doors, sets include an upper and lower track. Fasteners not included.

Aluminum Sliding Door Track Sets—For use with lightweight wood cabinet doors. Upper track is 33/64″ Ht.×1 1/4″ Wd. Bottom track is 17/64″ Ht.×1 1/4″ Wd. Both tracks have a dull finish and 1/8″ dia. mounting holes for #12 screw nails.

Plastic Sliding Door Track Sets—Made of polystyrene, track works well with lightweight glass panels and lightweight wood cabinet doors. Upper track is 9/16″ Ht.×27/32″ Wd. Bottom track is 5/16″ Ht.×27/32″ Wd. Color is tan. To mount, glue track in place or use double-sided tape.

Steel Roller Door Track Sets—For use with 1/4″ thick glass panels. Sets include a 5/8″ Ht.×15/16″ Wd. upper track, a 1″ Ht.×1″ Wd. bottom track with two ball-bearing carriers, and two shoes that rest on the carrier and hold the glass. Track, carriers, and shoes are zinc-plated steel. To mount, glue track in place or use double-sided tape. *Note:* Height of cabinet door should not exceed twice its width.

Steel	3/4″	2″	1″	#6	1714A3	1.69

I-Beam Roller Track Sets for Doors

Choose an I-beam track set and add extra track and hangers in the same capacity to create a longer run. Track mounts directly to the ceiling. Use with single doors, panels, and space dividers that are at least 1″ thick. Sets include I-beam track made from 0.125″ thick aluminum, a door guide that fits into a notch on the underside of a door, two hangers with precision ball bearing nylon wheels, and mounting hardware. Hangers hold a door 3 1/4″ from the ceiling and allow up to 1/2″ vertical adjustment. Conforms to ANSI/BHMA standards, Grade 1.

Roller Track Sets for Bypassing Doors

60-lb. Capacity Set

150-lb. and 250-lb. Capacity Sets

Doors pass each other smoothly as they roll along the track. Track can be cut with a saw. Sets include track, four hangers (two per door), adjustable door guides, and mounting hardware.

60-lb. Capacity Track Sets—Include one piece of track that requires 1 1/4″ to 1 9/16″ clearance from ceiling to top of door. Track is made from 0.024″ thick galvanized steel. Hangers are side-mount, one-wheel units with up to 5/16″ vertical adjustment. Both pairs of hangers have a 60-lb. capacity. Wheels are plastic.

150-lb. Capacity Track Sets—Include two pieces of track that require 1 3/4″ to 2 3/8″ clearance from ceiling to top of door. Track is made from 0.056″ thick aluminum. Hangers are top-mount, four-wheel units with up to 5/8″ vertical adjustment. Both pairs of hangers have a 150-lb. capacity. Wheels are plastic.

250-lb. Capacity Track Sets—Include two pieces of track that require 1 3/4″ to 2 3/8″ clearance from ceiling to top of door. Track is made from 0.056″ thick aluminum. Hangers are top-mount, four-wheel ball-bearing units with up to 5/8″ vertical adjustment. Both pairs of hangers have a 250-lb. capacity. Wheels are nylon.

150-lb. Capacity Low-Profile Roller Track System for Doors

Track with Mounting Brackets

Hanger

Track has thin rails to make hanging doors in tight areas easier.

Track with Mounting Brackets—There are 4″ high wall-mount brackets welded to the track. Track projects 1 1/8″ from wall and is roll-formed from 0.060″ thick galvanized steel. Brackets have 3/8″ dia. mounting holes (fasteners not included).

Hanger—Has two 2 1/8″ dia. nylon wheels and a steel mounting plate. Use two hangers per door. Furnished with fasteners.

Combine track, mounting brackets, and hangers of the same capacity to create a system for hanging doors, or choose a complete roller track set that has everything you need. ***Powder-coated*** track and track mounting brackets are tan.

Track Mounting Brackets— Mounting hardware not included. One *support bracket* is required for every 2 ft. of track. *End brackets* cap track ends to contain the hangers. *Joint brackets* hold adjoining sections of track together. *Double-track brackets* support two parallel tracks for hanging bypassing doors. *Ceiling-mount brackets* bolt to ceiling joists or hang from threaded rod.

Hangers— Made of zinc-plated steel, unless noted. Use two hangers per door. Mounting hardware included. *Steel ball bearings* last the longest. *Steel roller bearings* wear longer than acetal bearings. *Acetal sleeve bearings* are quiet and resist corrosion. ***Hangers with bolt*** are for doors with an angle iron or steel frame. Hangers bolt through the top of the framed door. Styles 1 and 2 have vertical adjustment. Style 3 swivels and has vertical adjustment. Style 4 and Style 5 have vertical and horizontal adjustment. Style 5 is also offset.

Hangers with mounting plate are for doors with an angle iron, steel, or wood frame and solid doors made of steel or wood. Hangers have a zinc-plated mounting plate that bolts onto the face of the door. Style 6 has vertical adjustment. Style 7 swivels and has vertical adjustment. Style 8 is offset and has vertical and horizontal adjustment.

Also Available: 400-lb. cap. galvanized steel track (0.047″ thick) with a welded-on "shield" that protects track interior from weather. Mounts directly to wall; no brackets required. Use with 400-lb. cap. hangers below. Interior is 1¾″ Wd.×2¼″ Ht. Has ⅜″ dia. mounting holes (hardware not included). Please ask for 1044A3 and specify length: 8 ft. or 10 ft.

Complete Roller Track Sets

Mount framed and solid sliding doors that are 1½″ to 2¼″ thick. Sets include tan powder-coated steel track; support, joint, and end brackets; a pair of hangers with mounting plate; a guide roller; floor end stops; bumper shoes; a bow handle and flush pull handle; and fasteners to mount hardware to door. The door and the bolts for mounting brackets to a wall are not included. Brackets for 400-lb. capacity set require ⅜″ bolts; brackets for 600-lb. capacity set require ½″ bolts.

800-lb. and 1,000-lb. Capacity Steel Roller Track Systems for Doors

Create a custom track system—just combine track, mounting brackets, and hangers of the same capacity.

Track—Has a tan powder-coated finish.

Track Mounting Brackets—Have a tan powder-coated finish. Mounting hardware not included. One *support bracket* is required for every 2 ft. of track. *End brackets* cap track ends to contain the hangers. *Joint brackets* hold adjoining sections of track together. *Ceiling-mount brackets* bolt to ceiling joists or hang from threaded rod.

Hangers—Made of zinc-plated steel, unless noted. All hangers have vertical adjustment. Style 2 and Style 4 also swivel. Use two hangers per door. Furnished with mounting hardware. *Steel ball bearings* are the longest lasting. *Steel roller bearings* have a long wear time. ***Hangers with bolt*** are for doors with an angle iron, steel, or wood frame. Hangers bolt through the top of the framed door. ***Hangers with mounting plate*** are for doors with an angle iron, steel, or wood frame and solid doors made of steel or wood. Hangers have a tan powder-coated mounting plate (unless noted) that bolts onto the face of the door.

High-Capacity Steel Roller Track System for Doors

The highest-capacity track system we offer—either 2,500-lb. or 5,000-lbs.

Track—Has a tan powder-coated finish.

Track Mounting Brackets—Have a tan powder-coated finish. Mounting hardware not included. One *support bracket* is required for every 2 ft. of track. *End brackets* cap track ends to contain the hangers. *Joint brackets* hold adjoining sections of track together. *Ceiling-mount brackets* bolt to ceiling joists or hang from threaded rod.

Hangers—All have vertical adjustment. Hanger frame is iron. Wheels are zinc-plated steel with steel ball bearings for long life. Use two hangers per door. Furnished with mounting hardware. ***Hangers with bolt*** are for doors with an angle iron, steel, or wood frame. Hangers bolt through the top of the framed door. ***Hanger with mounting plate*** is for doors with an angle iron, steel, or wood frame and solid doors made of steel or wood. Hanger has a tan powder-coated mounting plate that bolts onto the face of the door.

Type 316 Stainless Steel Roller Track Systems for Doors

Track (Shown with Wall-Mount Support Bracket)

Track End Stop

Suspended Ceiling-Mount Joint Bracket

Track and mounting brackets are made of Type 316 stainless steel for greater corrosion resistance than plain steel and Type 304 stainless steel. Combine track, mounting brackets, hangers, and end stops of the same capacity to create a complete system for hanging doors. All components have a dull finish.

Track—Made of Type 316 stainless steel.

Track Mounting Brackets—Made of Type 316 stainless steel. Mounting hardware not included. One *support bracket* is required for every 2 ft. of track. *Joint brackets* hold adjoining sections of track together.

Hangers—Made of Type 304 stainless steel and have vertical adjustment. Use two hangers per door. *300-lb. capacity hangers* have noncorrosive nylon sealed needle bearings. *600-lb. capacity hangers* have Type 304 stainless steel sealed needle bearings. ***Hangers with bolt*** are for doors with an angle iron, steel, or wood frame. Hangers bolt through the top of the framed door. Furnished with mounting hardware. ***Hangers with mounting plate*** are for doors with an angle iron, steel, or wood frame and solid doors made of steel or wood. Hangers have a mounting plate that bolts onto the face of the door. Require three #10×1" Lg. fasteners (not included) to mount door.

Track End Stops—Have a rubber stop to cap track ends and contain the hangers. Made of Type 304 stainless steel. Furnished with mounting hardware.

Curved and Straight Steel Roller Track Systems

Move your sliding doors, curtains, partitions, and vinyl strip doors straight ahead or have them take a turn along curved track. The track mounting brackets bolt directly to ceiling joists or hang from threaded rod; mounting hardware not included. Combine track, mounting brackets, hangers, and accessories from the same system.

100-lb. Capacity System: For Curtains and Partitions

Straight Track (Shown with Support Bracket)

90° Curved Track

Joint Bracket

All components are galvanized steel.

Track Mounting Brackets— One *support bracket* is required for every 4 ft. of track. *Joint bracket* holds adjoining sections of track together.

Hangers— All swivel and have a steel hook with a 3/16″ OD that fits into grommets on curtains, partitions, and vinyl strip doors. For hanging one curtain or partition, two hangers are recommended. Please note load capacity is per hanger.

End stop caps the track end to contain hangers.

Pull trolley bolts onto the leading edge of a curtain, partition, or strip door. Trolley has a 4-ft. long pull cord for easy opening and closing.

600-lb. Capacity System: For Doors, Curtains, and Partitions

Straight Track (Shown with Support Bracket)

90° Curved Track

Joint Bracket

Wall-Mount Adapter Bracket

Track—Made from 3/16″ thick steel with a tan powder-coated finish.

Track Mounting Brackets—Made of steel with a tan powder-coated finish. One *support bracket* is required for every 5 ft. of track. *Joint bracket* holds adjoining sections of track together. *Wall-mount adapter* converts a support or joint bracket into a wall-mount bracket.

Hangers with bolt are for doors with an angle iron, steel, or wood frame. Hangers bolt through the top of the framed door. Made of steel; Style 5 is zinc-plated. Furnished with mounting hardware. *Steel ball bearings* are the longest lasting. *Steel roller bearings* have a long wear time.

Hangers have vertical adjustment. Style 5 also swivels.

Hangers with mounting plate are for doors with an angle iron, steel, or wood frame and solid doors made of steel or wood. Hangers have a mounting plate that bolts onto the face of the door. Made of steel; Style 7 is zinc-plated. Furnished with mounting hardware. *Steel ball bearings* are the longest lasting. *Acetal roller bearings* are quiet and corrosion resistant.

Style 6 has vertical adjustment. Style 7 swivels and has vertical and horizontal adjustment.

Hangers for curtains and partitions can be connected using "S" hooks (not included). For hanging one curtain or partition, two hangers are recommended. Please note load capacity is per hanger. Made of zinc-plated steel. *Steel ball bearings* last the longest. *Steel roller bearings* wear longer than acetal bearings. *Acetal sleeve bearings* are quiet and corrosion resistant. Style 8 hangers swivel and have zinc-plated steel wheels. Style 9 hanger has acetal wheels.

600-lb. Capacity Self-Cleaning Round Steel Roller Track System for Doors

Round track eliminates edges where dust and debris can accumulate, allowing particles and moisture to simply leave the track through the bottom slot.

Track with Mounting Brackets— Track comes with wall-mount brackets already attached beginning 1 ft. from each end on 2-ft. centers. Made of galvanized steel. Use screws or lag bolts (not included) to install track. *Joint collar* is used to align and lock together two sections of track. Furnished with a mounting nut. *End cap* contains hangers and keeps debris out.

Hangers— Have heavy duty, self-lubricating acetal wheels with steel ball bearings. All have vertical adjustment. Furnished with mounting hardware. ***Hangers with bolt*** are for doors with an angle iron, steel, or wood frame. They bolt through the top of the framed door. ***Hangers with mounting plate*** are for doors with an angle iron, steel, or wood frame and solid doors made of steel or wood. Hangers have a mounting plate that bolts onto the face of the door.

Corrosion-Resistant I-Beam Trolley Systems for Doors

Use this trolley system in chemical plants and anywhere corrosion resistance is required. Track is marine-grade, black anodized aluminum, and trolleys are Type 316 stainless steel. Combine track, trolleys, track bolts, and pin stops of the same capacity to create a complete system for hanging doors.

Track mounts on ceilings and beams using track bolts (sold separately below). For extra stability in your system, an additional track can be mounted to the floor. To join track sections, just butt them together—no connectors needed. Mounting holes are on 3 15/16″ centers and have plastic inserts for a better grip. ***Track bolts*** are used to mount track. Track requires nine bolts for every 3 ft. of track. Made of 300 series stainless steel. ***Track pin stops*** are used at ends of track to prevent trolleys from sliding off. Stops have a Type 316 stainless steel spring.

To Order: Please specify track length: 3 ft., 6 ft., 9 ft., or 19 ft.

Cap., lbs.	Track Wd. × Ht.	Track Per Ft.		Trolleys Each		Track Bolts Each		Track Pin Stops Each
550	3/4″ × 15/16″	9484T41	$15.23	9484T21	$85.84	9484T71	$15.78	9484T11	$36.53

Door Stops and Guides

Control the motion of the door in your track system with door stops and guides. Mounting hardware not included, unless noted. ***Stops*** hold and stop doors. ***Roller*** and ***slide guides*** keep sliding and bypassing doors in their tracks and rolling smoothly. Slide guides also keep doors in perfect alignment.

♦ Mounting hardware included.

Wheels for Door Hangers

Give them a spin—wheels are perfect as replacements on an existing hanger or the starting point for a custom model. Wheels have a 1/2″ dia. bolt hole, so you can add a bolt for mounting doors with frames or a bolt and mounting plate for mounting solid doors (bolt and mounting plate not included). Wheels are zinc-plated steel. *Steel roller bearings* wear longer than acetal. *Acetal sleeve bearings* are quiet and corrosion resistant.

Capacity lbs./Pair	Wheel Wd.	Wheel Ht.	Wheel Dia.	Bolt Hole Size		Each

Hook-and-Catch Door Holders

Type 304 Stainless Steel

Gray Nylon

Commonly used on semi-trailer doors, these holders have a long hook that secures even heavy doors in the open position. Holders surface mount and have 3″ Lg.×1 3/4″ Wd.×1/8″ Thick. mounting plates. Require eight #10 screws (not included). ***Zinc-plated steel*** and ***Type 304 stainless steel*** hooks have 3/16″ dia. shafts and project 17/64″ from mounting plate. ***Nylon*** hooks have a 19/64″ dia. shaft and project 57/64″ from mounting plate. Temperature range is −20° to +150° F.

Magnetic Door Holders

A magnet embedded in a durable plastic disc holds the door open and allows for easy door release. Styles 4 and 6 do not include screws.

Style 4— For floor mounting. Require two #6 screws and a #8 screw.

Style 5— For floor and wall mounting. Screws for mounting to wood are included; hardware for mounting to concrete is sold separately.

Style 6— For wall mounting. Require four #12 flat head screws.

Door and Hardware Protectors

Protect doorknobs and other hardware from getting damaged by lift trucks, carts, and dollies. Mounting screws are included.

Style 8— Made of 0.375″ thick Type 304 stainless steel.

Style 9— Furnished with mounting screws for 1 3/4″ thick doors. *Spring steel* protectors are 0.125″ thick steel with a primed finish that can be painted. *Type 302 stainless steel* protectors are 0.109″ thick.

Wall-Mount Door Stops

All have replaceable rubber pads.

Styles 1&2— Have a self-tapping screw for easy baseboard installation. No mounting screws required. 1431A15 meets Fed. Spec. 1322; 1431A11 meets Fed. Spec. 1322AL; and 8104A11 meets ANSI A156.16.

Style 3— Mounting screws are included. Meet Fed. Spec. 1320, BHMA (Builders Hardware Manufacturers Assoc.) L12011, and ANSI 156.16.

Adjustable Hinge-Pin Door Stops

Just slip the stop over the door hinge pin to halt the door—it's that easy. Bushings are removable and accommodate ¼″ to 5/16″ dia. hinge pins. All stops have a brass finish and nonmarring, replaceable rubber pads.

Cast aluminum stops come with an easy-to-adjust nut and threaded stud.

Steel stops have a sturdy, slip-resistant screw adjustment.

Material	Max. Door Opening	Each	Repl. Rubber Pads Pkg. Qty.		Pkg.
Cast Aluminum	85°-125°	**1398A16**	$1.27	5	**1431A56**	$1.54
Steel	70°-100°	**1398A14**	3.12	10	**1398A24**	2.67

Floor-Mount Door Stops

Super-strong stops take a beating so your walls don't have to. All stops meet ANSI 156.16. ***Standard*** and ***full-cushion*** stops meet Fed. Spec. 1328 and 1328E and BHMA (Builders Hardware Manufacturers Assoc.) L12121 and L12131. ***Half-dome*** stop 1426A3 meets Fed. Spec. 1330 and 1330E and BHMA L12141. 1426A4 meets Fed. Spec. 1330A and 1330AE and BHMA L12161. ***Round stops with stud*** meet Fed. Spec. 1328E and BHMA L12131.

Standard stops have replaceable, nonmarring rubber pads and are for doors having 1¾″ or less clearance from the floor to the bottom edge of the door. Mounting screws are included.

Full-cushion stop has a large, nonmarring rubber pad to absorb shock. Designed for doors having 1½″ or less clearance from the floor to the bottom edge of the door. Mounting screws are included.

Half-dome stops have a replaceable, nonmarring rubber pad. Mounting screws are included.

Round stops with stud resist chemicals and weather. Caps are nonmarring rubber. Mount into a 1″ Dia. × 2¾″ Dp. hole and set with grout.

Optional riser for half-dome stops raises your half-dome stops ⅜″. Riser has a dull chrome finish.

♦ **To Order:** Please specify finish: dull brass, polished brass, or dull chrome.

Chain and Spring Door Stops

Stops prevent doors from opening too far, reducing stress on door hinges and closers. Mounting screws are included.

Standard Duty— For wood and aluminum screen and storm doors. Made of steel with zinc-plated finish. A drawbar spring is on one end.

Heavy Duty— For full-size exterior doors. Made of carbon steel with a polished chrome finish. Each end has drawbar springs. Furnished with a tear resistant, gray vinyl cover. Meet BHMA (Builders Hardware Manufacturers Assoc.) L02231 and ANSI A156.16 for LB2231.

Chain Length	For Door Width		
Standard Duty			
18″	Up to 36″	**1472A12**	$4.38
Heavy Duty			
20½″	30″	**1472A33**	25.24
25½″	36″	**1472A35**	26.92
30½″	42″	**1472A37**	29.77

Door Kick Plates

Also known as door plates, armor plates, or mop plates, these kick plates have mounting holes and include screws. ***Standard duty*** kick plates are 0.05″ thick. ***Heavy duty*** kick plates are 0.06″ thick.

Note: We recommend choosing a kick plate with a width that is 2″ narrower than the overall width of your door. This will prevent the kick plate from interfering with the opening and closing of your door.

Pull and Push Plates

Push Plate — ***Oval-Grip Pull Plate*** — ***Rectangular-Grip Pull Plate*** — ***Round-Grip Pull Plate*** — ***Barrier-Free Round-Grip Pull Plate***

Protect your wood and metal doors with these pull and push plates. They have beveled edges and mounting holes. Screws are included. *Antimicrobial* plates have a coating that inhibits the growth of bacteria, mold, and mildew.

Barrier-free pull plates have extra clearance between the handle and the plate.

Door Edge Repair Plates

Two-Sided Edge Plate — ***Three-Sided Edge Plate*** — ***Two Sided, Square*** — ***Three Sided, Beveled*** — ***Combination Kick Plate/ Edge Plate***

Don't replace your rotted, rusted, or dented doors—cover damage with these repair plates. Mount to 1¾″ thick doors. All have mounting holes and include screws.

Edge plates mount to the edge of the door. Plates are made of dull Type 316 stainless steel, except the 83⅛″ long plate, which is made of dull Type 304 stainless steel. *Note:* 42″ and 83⅛″ long plates may require partial cutouts for door hinges or lock hardware. **To Order:** Please specify square or beveled door edge.

Combination kick plates/edge plates mount to the bottom of the door.

Door Lock Cover and Repair Plates

Convert from one lockset style to another without repairing or replacing your door. For wood and metal doors. Mounting screws are included.

Style A—For cylindrical locksets. Bore holes are 2⅛″ dia.

Styles B&C—For cylindrical locksets with lever handles. Bore holes are 2⅛″ dia. *Style B* is for Schlage D (see 11325A and 12905A on pgs. 2906-2907), Yale 5400 LN (see 11685A on pg. 2908), Sargent 10 (see 12115A on pg. 2908), Corbin Russwin 800, and Arrow H series locksets. *Style C* is for Best 93K and 7000 and Sargent 6500.

Style D—For Simplex 1000 series locks (see 8114A on page 2910).

Style E—For DL 2700 series alarm locks (see 12825A on page 2910).

Style F—For mortise-style locksets. Cover plates have an insert to use when lockset does not have a trim plate.

♠ Has a rectangular cutout. ★ Width is 9/16″.

Style S Doorknob Cover

Protect keyed doorknobs from tampering. Fits max. rose dia. of 2 11/16″. Projection is 3″. Base plate is 3½″×3½″. Has a gray powder-coated finish.

13055A81	$29.60

Temporary Door Lock

Maintain security while repairing or replacing an existing lockset. Fasten this reusable lock to a metal door frame (min. 2″ face) using the screw holes from your existing strike plate; it fits most hole patterns. Lock does not mount to your door, yet effectively denies access when secured with a padlock (not included, 5/16″ max. shackle dia.). When door is closed, all screws are hidden. Max. door thickness is 1¾″.

Made of zinc-plated steel, lock is 6⅜″ high and works with both in-swinging and out-swinging doors. Mounting screws are included.

1944A11	$49.54

About Door Locksets

Backset

Passage

Privacy

Entrance

Storeroom and Classroom

Backset

Backset is the distance from the edge of the door to the center of the lockset's mounting hole. The most common backsets are 2⅜″ and 2¾″.

Functions

Passage— Both handles are always free-turning. No keys required.

Privacy— The push button on the inside handle locks the outside handle. Turn the inside handle to release push button. If push button is engaged while door is open, closing the door releases it, preventing accidental lockouts. Also opens from outside with a small screwdriver. No keys required.

Entrance— The push button on the inside handle locks the outside handle. Open the door with a key outside, or by turning the inside handle. Has a deadlocking latch for extra security.

Storeroom— Inside handle is always free-turning. Outside handle is always locked and unlocks by key only. Has a deadlocking latch for extra security.

Classroom— Inside handle is always free-turning. Outside handle is free-turning except when locked by key. Has a deadlocking latch for extra security.

Keying

Keyed Differently— Each lockset opens with a different key. Locks have random key numbers. You won't know your key number until you receive your lockset.

Keyed Alike— Locksets with the same McMaster-Carr part number open with the same key.

Master Keyed— Each lockset opens with a different key; master key opens all locks. Master keys must be ordered separately.

Keyway

Keyway is important when you are matching a lockset to an existing key system. The keyway style, "C" or "E," is stamped on the original key that comes with a lockset. If your key is a copy, order one of each sample key blank below and try them in your lock. The sample blank that fits your lock identifies your keyway style.

Style "C" Keyway Sample Blank **2164A11** $0.57
Style "E" Keyway Sample Blank ..... **2164A12** .53

Schlage Lever Locksets

The lever handles on these locksets are easy to operate. When installed properly, they help you comply with the Americans with Disabilities Act (ADA). Use on wood and metal doors. Reversible for right- and left-hand doors. Latch bolt extends ½″ from edge of door. Furnished with strike plate, mounting hardware, and instructions. UL listed for three-hour fire doors.

Heavy Duty "D" Series— For doors with continuous use, such as cafeteria doors and main entrance doors. Fits 1⅝″ to 2⅛″ thick doors. Handle is 4⁹⁄₁₆″ long and projects 2¹⁵⁄₁₆″ from face of door. Rose is 3⁷⁄₁₆″ dia. Meets ANSI A156.2 Grade 1 standards for 800,000 cycles.

Standard Duty "AL" Series— Fits 1⅜″ to 1⅞″ thick doors. Handle is 4¼″ long and projects 2½″ from face of door. Rose is 3⁷⁄₁₆″ dia. Meets ANSI A156.2 Grade 2 standards for 400,000 cycles.

Entrance, Storeroom, and Classroom Functions— Come with two Schlage "C" style keys per lockset. *Keyed-alike* and *master-keyed* locksets are keyed to a McMaster-Carr key-numbering system. Master keys for master-keyed locks must be ordered separately; they're listed below. Use locksets *without lock cylinders* when you want to reuse your existing Schlage or other compatible cylinder in the new lock. **To Order:** For master keys, please specify the lockset's finish (dull chrome or dark bronze). For 13045A keys, also specify the lockset's backset (2⅜″ or 2¾″).

Also Available: Locksets to match your existing key system. Please tell us your key number when ordering a keyed lockset.

Also Available: Locksets with Schlage "E" style keyway ("E" is stamped on key). Please ask for 11325A91 for heavy duty or 13045A67 for standard duty and specify lockset function (entrance, storeroom, or classroom), keying style (keyed differently, keyed alike, or master keyed), backset (2⅜″ or 2¾″), and finish (dull chrome or dark bronze).

Schlage Knob Locksets

A traditional choice, these locksets have smooth, round knobs. Use on wood and metal doors. Reversible for right- and left-hand doors. Knobs are 2 1/8" dia. and project 2 9/16" from door. Rose is 2 9/16" dia. Latch bolt extends 1/2" from edge of door. Furnished with strike plate, mounting hardware, and instructions. UL listed for three-hour fire doors.

Heavy Duty "D" Series— For doors with continuous use, such as cafeteria doors and main entrance doors. Fits 1 3/8" to 2" thick doors. Meets ANSI A156.2 Grade 1 standards for 800,000 cycles.

Standard Duty "A" Series— Fits 1 3/8" to 1 7/8" thick doors. Meets ANSI A156.2 Grade 2 standards for 400,000 cycles.

Entrance, Storeroom, and Classroom Functions— Come with two Schlage "C" style keys per lockset. *Keyed-alike* and *master-keyed* locksets are keyed to a McMaster-Carr key-numbering system. Master keys for master-keyed locks must be ordered separately; they're listed below. Use locksets *without lock cylinders* when you want to reuse your existing Schlage or other compatible cylinder in the new lock. **To Order:** For master keys, please specify the lockset's finish (dull chrome or dull stainless steel). For 12895A keys, also specify the lockset's backset (2 3/8" or 2 3/4").

Also Available: Locksets to match your existing key system. Please tell us your key number when ordering a keyed lockset.

Also Available: Locksets with Schlage "E" style keyway ("E" is stamped on key). Please ask for 12905A15 for heavy duty or 12895A17 for standard duty and specify lockset function (entrance, storeroom, or classroom), keying style (keyed alike, keyed differently, or master keyed), and finish (dull chrome or dull stainless steel). For 12895A17, also specify backset (2 3/8" or 2 3/4"). 12905A15 has a 2 3/4" backset.

Schlage Heavy Duty Mortise Lever Locksets

The body of the mortise lock fits within a 6 1/4" Ht. × 1" Wd. × 4 1/2" Dp. cutout in the door, so it's extra durable. When installed properly, these locksets help you comply with the Americans with Disabilities Act (ADA).

Use on 1 3/4" thick wood and metal doors. Reversible for right- and left-hand doors. Handles are 4 5/8" long and project 2 3/4" from door. Rose is 2 1/8" dia. Latch bolt extends 3/4" from edge of door. UL listed for three-hour fire doors. Meet ANSI A156.13 Grade 1 standards for 1,000,000 cycles.

Entrance and Storeroom Functions— Lock cylinder has a Schlage "C" style keyway and comes with two keys. *Entrance function* has a deadbolt that extends 1" into door frame and locks with a turnpiece.

Lock Function	Backset	Dull Chrome		Dark Bronze		Dull Stainless Steel

For information about door locksets, see page 2906.

Yale, Sargent, and Corbin Russwin Locksets

Lever Lockset

Knob Lockset

Use these locksets on wood and metal doors. They're reversible for right- and left-hand doors. Latch bolt extends ½″ from edge of door. Furnished with strike plate, mounting hardware, and instructions. UL listed for three-hour fire doors. ***Lever locksets*** offer easy gripping. When installed properly, the lever locksets help you comply with the Americans with Disabilities Act (ADA).

Heavy Duty— For doors with continuous traffic, such as cafeteria doors and main entrance doors. Backset is 2¾″. Meet ANSI A156.2 Grade 1 standards for 800,000 cycles. **To Order:** For Corbin Russwin keyed locksets, please specify keyway style: "L4," "D1," or "60" (keyway style is stamped on key).

Standard Duty— Meet ANSI A156.2 Grade 2 standards for 400,000 cycles. **To Order:** Please specify backset: 2⅜″ or 2¾″. For Corbin Russwin keyed locksets, also specify keyway style: "L4," "D1," or "60" (keyway style is stamped on key).

Entrance, Storeroom, and Classroom Functions— Come with two keys per lockset. ***Yale*** locksets have a Yale 8 (Para) style keyway ("Yale" is stamped on key). *Yale lever locksets* have tamper-resistant handles. When latch bolt is locked, the outside lever rotates freely so it can't be used for leverage during a forced entry. ***Sargent*** locksets have an "LA" style keyway ("Sargent" and "LA" are stamped on key). ***Corbin Russwin*** locksets have tamper-resistant handles. When latch bolt is locked, the outside lever rotates freely so it can't be used for leverage during a forced entry.

Interchangeable Core Lever Locksets

Use these lever locksets when you need to match the keying of an existing system or want the option of changing the lock's core without disassembling the lock. Locksets are compatible with Best, Arrow, Falcon, Alarm Lock, and Simplex small-format interchangeable cores (not included, see page 2910). Use a control key (not included, see page 2910) to remove and install cores. Use locksets on wood and metal doors that are 1¾″ to 2⅛″ thick. Reversible for right- and left-hand doors. Handle is 5½″ long and projects 3¼″ from door. Rose is 3½″ dia. Latch bolt extends ½″ from edge of door. All have a dull chrome finish.

When installed properly, these locksets help you comply with the Americans with Disabilities Act (ADA). Furnished with strike plate, mounting hardware, and instructions. UL listed for three-hour fire doors. Locksets meet ANSI A156.2 Grade 1 standards for 800,000 cycles.

Corrosion-Resistant Knob Locksets

A good choice for marine and washdown environments, these locksets are made of stainless steel and other corrosion-resistant materials. For wood and metal doors that are 1⅜″ to 1⅞″ thick. Reversible for right- and left-hand doors. Knob is 2⅛″ dia. and projects 2 11/16″. Rose is 2⅝″ dia. Latch bolt extends 9/16″ from edge of door. Finish is dull stainless steel. Furnished with strike plate, mounting hardware, and instructions. UL listed for three-hour fire doors. Meet ANSI A156.2 Grade 1 standards for 800,000 cycles.

Passage and Privacy Functions— Do not require a key. Passage function does not have a lock. Privacy function has a push-button lock.

Entrance, Storeroom, and Classroom Functions— Have a Schlage "C" style keyway ("C" is stamped on key) and are keyed differently. Supplied with two keys.

For information about door locksets, see page 2906.

Antimicrobial Locksets

A clear antimicrobial powder coating on these locksets inhibits the growth of bacteria, mold, and mildew. Great for use in labs, clean rooms, and hospitals. Backset is 2¾″. All have a dull chrome finish. Reversible for right- and left-hand doors. The latch bolt extends ½″ from edge of door. Furnished with strike plate, mounting hardware, and instructions. UL listed for three-hour fire doors.

Lever Lockset

Lever Locksets— Work well for doors with continuous traffic. For wood and metal doors that are 1¾″ to 2″ thick. Handle is 5″ long and projects 2½″. Rose is 3½″ dia. When properly installed, these locksets help you comply with the Americans with Disabilities Act (ADA). Meet ANSI A156.2 Grade 1 standards for 800,000 cycles.

Knob Locksets— For wood and metal doors that are 1⅜″ to 1¾″ thick. Knob is 2⅛″ dia. and projects 2 13/16″. Rose is 2½″ dia. Meet ANSI A156.2 Grade 2 standards for 400,000 cycles.

Entrance, Storeroom, and Classroom Functions— Have an "LA" style keyway ("Sargent" and "LA" are stamped on key). Supplied with two keys.

Regular Duty Deadbolt Locks

Made of brass, these locks have a latch bolt that extends 1″ from the edge of the door for added security. Use on 1⅜″ to 1¾″ thick wood and metal doors. Locks are reversible for right- and left-hand doors. Keyway is Schlage "C" style. Fit cutouts from 1⅞″ to 2⅛″ dia. Rose is 2½″ dia. Furnished with strike plate, lock cylinder(s), two keys, mounting hardware, and instructions.

Lock Cylinder with Turnpiece

Lock cylinder with turnpiece has a lock cylinder with keyway on one side and opens with a turnpiece on the other side. ***Lock cylinder on both sides*** opens with a key on both sides of the door.

Lock Cylinder on Both Sides

Also Available: Locks keyed to your specific key number. Please ask for 1789A999 and tell us your key number.

Wire Partition Gate Locks

Secure gates in wire and chain link partitions and fences. Made of cast aluminum, locks have a ½″ Wd. × 3/16″ Dp. groove around the case (top, bottom, and back) so they can be securely fastened to the gate. Reversible for right- and left-hand gates. Locks open with a turnpiece on one side. Use locks with a ***mortise lock cylinder***, sold separately. Lock cylinder comes with two keys.

Swinging-Gate Lock— Latch projection is 1⅛″. Latch retracts ½″.

Sliding-Gate Lock— Hook projection is 53/64″. Requires a strike plate, sold separately.

Push and Pull Door Latches

A slight push or pull on the lever opens the door, allowing hands-free operation. When installed properly, these latches help you comply with the Americans with Disabilities Act (ADA). All have heavy duty construction for high-traffic areas. Choose latches that mount with the handles in a vertical or horizontal position.

For wood and metal doors up to 1¾″ thick. Reversible for right- and left-hand doors. Latch bolt extends ½″ from edge of door. Cover plates are 5½″ Ht. × 2 9/16″ Wd. Handles are 4½″ Ht. × 1½″ Wd. and project 2⅝″. Furnished with strike plate and mounting screws. UL listed for three-hour fire doors.

Latches with a ***dull chrome finish*** are aluminum. Latches with a ***dull stainless steel finish*** are Type 304 stainless steel.

Mechanical Push-Button Locksets

Standard, Knob Style

Standard, Left-Hand Lever Style

With Key Option, Right-Hand Lever Style (Core Sold Separately)

No need for electrical wiring or batteries—these locks are completely mechanical. Use them for security in high-traffic areas indoors and outdoors. Locks have a push-button combination for outside entry. The inside handle is always unlocked. Locksets accept one 1-5 digit code. All personnel share the same code; there are thousands of possible combinations. Furnished with a combination change key so you can quickly reset the combination without removing the lock from the door.

Each lockset fits 1⅜″ to 2¼″ thick wood and metal doors and has a heavy duty, deadlocking latch bolt that extends ½″ from the edge of the door. Backset is 2¾″ (see page 2906 for information about backset). Housing is 7⅜″ Ht.×3⅛″ Wd. and projects 3¹³⁄₁₆″. Not rated for temperature. Furnished with strike plate, mounting hardware, and instructions. Locksets meet ANSI 156.2 Grade 1 standards for 800,000 cycles. UL listed for three-hour "A" labeled fire doors. ***Lever-style*** locksets help you comply with the Americans with Disabilities Act (ADA) when properly installed.

Locksets with Passage Feature— For doors that need to be unlocked for long periods of time. Use the turnpiece on the inside to override the combination so door can be opened freely from the outside.

Locksets with Key Option— The handle accepts an interchangeable lock core (sold separately, see 12795A on this page) so you can open the lock with either the combination or a key.

Electronic Keypad Locksets

Battery Operated with Schlage "C" Keyway

Battery Operated with Interchangeable Core (Core Sold Separately)

Self Powered

All of these keypad locksets accept multiple codes to provide a higher level of security than mechanical push-button locksets; a single code can be restricted without disruption to other personnel. Gain access from the outside with a 12-button metal keypad or key (where applicable). Inside handle is always unlocked. A visual display and an audible signal indicate when the correct code is entered and the door is unlocked. Reversible for right- and left-hand doors. Backset is 2¾″ (see page 2906 for information about backset). Housings are die cast zinc.

Furnished with strike plate, mounting hardware, and instructions. Locksets meet ANSI 156.2 Grade 1 standards for 800,000 cycles. UL listed for three-hour "A" labeled fire doors. Keyed locksets are keyed differently (each lock opens with a different key) and come with two keys. All locksets have a lever handle and help you comply with the Americans with Disabilities Act (ADA) when properly installed.

Battery-Operated Locksets— Have multiple levels of codes and can be programmed for up to 100 unique 3-5 digit codes. Units operate on five AA batteries (included) and have a low-battery warning. Locks that accept an interchangeable lock core do not include a core (sold separately, see 12795A on this page). Locksets fit 1⅝″ to 1⅞″ thick doors. Deadlocking latch bolt extends ½″ from door. Housing size is 8″ Ht.×3¼″ Wd. Locksets project 2⁹⁄₁₆″. Locksets ***for exterior weatherproof doors*** have a double-sealed keypad; temperature range is –31° to +151° F.

Self-Powered Locksets— No batteries or electrical wires needed—a few cranks of the lever and this tamper-resistant system generates its own power, making it maintenance free. Locksets support up to 20 unique 1-8 digit codes. Fit 1⅜″ to 2″ thick doors. Latch bolt extends ⁹⁄₁₆″ from edge of door. Housing is 9¼″ Ht.×3½″ Wd. with a 4″ projection. Include two keys for manual override. Outdoor use requires the gasket kit and weather shield (sold separately). Temperature range is –13° to +151° F.

Interchangeable Lock Cores

These lock cores fit into the locksets on this page as well as Best, Arrow, Falcon, Alarm Lock, and Simplex small-format interchangeable core locksets. Use a control key to install a core in your interchangeable core lockset; you don't need to disassemble the lock.

Cores have a six-pin tumbler locking mechanism and include two keys. Choose Best E or Best A keyway. If you do not have a preference, we recommend using Best E keyways. A ***control key*** (sold separately) is required to remove and install a lock core. A ***master key*** (sold separately) is also required for a master-keyed lock core. One key can be used for multiple cores. For information about keying options, see page 2934.

To Order: For lock cores, please specify finish: dull chrome or dull brass.

	Best E Keyway		Best A Keyway	
Keyed Differently Lock Core	12795A85	$16.46	12795A95	$16.46
Keyed Alike Lock Core	12795A86	17.01	12795A96	17.01

Master Key (for Master-Keyed Cores)	12795A66	1.18	12795A72	1.18

Motorized Combination Lock

Use the push buttons to enter your own six-digit code and the battery-operated motor retracts the deadbolt latch to open your safe, vault, or door. Lock accepts one master code (for setting, changing, and deleting codes and time delays) and eight access codes. Optional time delay keeps the latch locked from one to nine minutes after you enter your code. Time delay is adjustable in one-minute increments. For indoor use.

Lock is zinc with a dull chrome finish. Operates on two 9-volt batteries (included) and has a low-battery warning signal. If battery power is interrupted, the lock retains your programmed codes. Housing is 3⁵⁄₁₆″ Lg.×2¹³⁄₃₂″ Wd. and projects 1¹³⁄₆₄″. Deadbolt latch is 1″ Ht.×⁵⁄₁₆″ Wd. and extends ¹⁵⁄₃₂″. Keypad is 4″ dia. UL listed. Mounting hardware and instructions are included.

10235A43 ..... $214.73

Push-Button Combination Locks

Outside View

With Deadlocking Latch
Inside View

With Deadbolt
Inside View

Use these mechanical locks in place of traditional deadbolts to limit access. Simply enter the 1-5 digit combination and turn the latch to open. All personnel share the same code; there are over 2,000 possible combinations. A turnpiece allows easy opening from the inside. For indoor and outdoor use. Not rated for temperature.

For wood door and frame installation (for metal doors, use adapter kit, sold separately). Reversible for right- and left-hand doors. Outside lock is 3¾″ Ht.×2⁹⁄₁₆″ Wd.×¹⁵⁄₁₆″ Dp.; inside lock is 5″ Lg.×3¹¹⁄₁₆″ Wd.×1⁹⁄₁₆″ Dp. Backset is 2½″ (see page 2906 for information about backset). Locks require a 1⅝″ dia. mounting hole. Made of die cast zinc with a brass faceplate. Inside has a matching finish. Furnished with strike plate, mounting hardware, and instructions.

With Deadlocking Latch— A latch bolt and a deadlocking latch secure door and prevent prying. When you close the door, the unit automatically locks. The latch can be held in the retracted position for unrestricted entry. Deadlocking latch extends ⅝″ from edge of door.

With Deadlocking Latch and Key Bypass— The same as the locks with deadlocking latch above, but can be opened from the outside with a key that overrides any combination and allows entry. Locks are keyed differently (each lock opens with a different key). Furnished with two keys.

With Deadbolt— Deadbolt extends 1″ from edge of door for added security. When you close the door, you have to manually relock the lock.

Metal Door Adapter Kit— Use to install locks on metal doors. Kit includes surface-mounted strike plate and adjustable riser plate.

For Door Thickness	Dull Chrome		Dull Brass

Proximity and Keypad Lockset and Readers

Up to 500 employees can use all methods of access—a code and/or an HID compatible proximity card or key fob (each sold separately). You can restrict the access methods of individuals. Memory is retained when power is interrupted. Keypads accept 1-6 digit codes. Use indoors or outdoors with the included weather shield gasket. All are HID compatible with a 26-bit format. UL listed. ***Optional tracking software*** (sold separately) lets you program the time of day the codes and proximity cards are in effect and tracks up to 2,000 events (code, entry time, unauthorized codes, etc.). Requires Windows 2000 or XP and a PDA or other portable data transfer device.

(A) Lockset with Proximity Reader and Keypad— A lever lockset is combined with access control. Lockset has a cylinder lock with two keys for emergency override. Inside lever is always unlocked. Reversible for right- and left-hand doors. Unit is 14¼″ Ht.×3¾″ Wd. and projects 3″. Keypad is black plastic with a blue reader surface. Housing is zinc and has a chrome finish. Latch bolt extends ½″ from edge of door. Backset is 2¾″ (see page 2906 for information about backset). Unit requires six AA batteries (included) and has a low battery indicator. Temp. range is –40° to +135° F. Furnished with strike plate and mounting hardware.

(B) Proximity Reader and Keypad— Use this reader and keypad with existing door hardware that is electrically actuated (electrified locks, electric strikes, etc.) to restrict access to areas such as computer rooms. Operates on 12 VDC or 24 VDC. Hardwire to an existing power source or use the 12 VDC power supply (sold separately below). Power supply operates on 115 VAC, 60 Hz; output current is 1 amp. Keypad housing is dark gray plastic with a black reader surface. Unit is 5¼″ Ht.×2¾″ Wd.×1⅝″ Dp. Temp. range is –22° to +122° F.

		Each
A ... Lockset with Proximity Reader and Keypad	1625A1	$1,132.22
B ... Proximity Reader and Keypad	1625A7	609.61
HID Proximity Card	1625A3	4.76
HID Proximity Key Fob	1625A4	7.53
Optional Tracking Software (CD-ROM)	1625A5	214.36
Repl. AA Batteries for Style A (4/Pkg.)	71455K53	Pkg. $2.94
Optional Power Supply for Style B	1625A8	Each $183.10

Electronic Touch-Screen Keypad Lockset

You don't need software or a programming device to give employees access privileges via their own keypad code. To use, touch the screen to activate the keypad, enter PIN, and turn the lever. Lockset is programmed with an easy mode which accepts up to 9 PIN codes, and an advanced mode that accepts up to 1,000 PIN codes. There are a variety of programming options including silent, unlock, and lockout modes. An LED indicates system status and low battery. For indoor and outdoor use; lockset comes with a weather-resistant gasket. Temperature range is –20° to +140° F.

Use this lever lockset to replace your current lever or knob cylindrical lockset. Lockset fits 1¾″ thick doors. Inside lever is free turning. Lockset has a cylinder lock and two keys for emergency override. Reversible for right- and left-hand doors.

Lockset is 7⅝″ Ht.×3¹¹⁄₁₆″ Wd. and projects 3⁵⁄₁₆″. Housing is steel with a dull chrome finish. Latch bolt extends ½″ from edge of door. Backset is 2¾″ (see page 2906 for information about backset). The lockset operates on four AA batteries (included). Furnished with strike plate, mounting hardware, and instructions.

Lockset ..... 9632T3 ... $350.00

Magnetic Stripe Card Reader Entry Control System

Access restricted areas with a control card; no keys required. System includes a card reader, 10 control cards, a transformer to convert 120 VAC to 12 VAC to power the reader, a hand-held programmer to activate/deactivate cards, instructions, and mounting hardware. An LED indicates system status. Designed for up to 10,000 cards.

Housing is black polycarbonate. Size is 5″ Ht.×7″ Wd.×1½″ Dp. Surface mount the card reader on a wall near any interior door that operates with an electric strike or electromagnetic lock that has its own power source (not included, see pages 2912-2913).

Additional control card (sold separately) allows you to add new members. **To Order:** Please specify the card code number on the last card number in your set.

Card Reader System ..... 1254A71 ... $433.09
Additional Control Card ..... 1254A73 ... 4.17

ADA-Compliant Automatic Door Openers

Wall-Mount Switch

Automatic swing-door openers offer easy access and hands-free opening for deliveries. When properly installed, openers help you comply with the Americans with Disabilities Act (ADA). In automatic mode, operate openers either by pushing on the door until the automatic opener takes over or by wiring the opener to a push-button switch (sold separately). Automatic opening force is less than 15 lbs. If an obstruction is sensed while opening, the unit automatically reverses direction. Adjustable "hold open" is 1-30 seconds. In manual mode, units operate as standard door closers.

Openers have an aluminum finish, are completely self-contained, and surface mount to an inside frame above interior or exterior doors. Reversible for right- and left-hand doors up to 200 lbs. and 48″ wide. Require 4½″ of clearance above the door. Openers are 27″ Lg.×4¾″ Wd. with a 4¾″ projection. Require hardwiring to a 115 VAC line. Furnished with mounting hardware. UL listed for fire-rated applications.

Regular arm mount pushes door open from inside. ***Parallel arm mount*** pulls door open from inside. See page 2914 for door mounting information.

Switches— Switch plates have "Push to Open" wording and ADA logo. Wire directly to the opener. Mounting screws are included.

Regular Arm Mount Opener ..... 10535A11 ... $1,897.74
Parallel Arm Mount Opener ..... 10535A12 ... 1,897.74
Door Frame Mount Switch (4¾″×1½″) ..... 10535A55 ... 84.87
Wall-Mount Switch (4¾″×4¾″) ..... 10535A56 ... 125.00

About Choosing an Electric Strike

There are several factors to consider when choosing an electric strike:

1. Type of Lockset— Electric strikes have a latch-holding cavity that must line up with your lockset's latch bolt. The location of the latch bolt can differ between *cylindrical locksets* (pages 2906-2909) and *mortise locksets* (page 2907). See the diagrams at left to determine the type of lockset you have. Then, compare the face plates on the electric strikes on this page with your existing strike plate to find the correct electric strike. *Side-latch exit devices* (pages 2920-2921) surface mount on the door face and the latch extends into an electric strike surface-mounted on the door frame.

2. Door Frame Material and Case Size— To reduce door frame preparation work, choose an electric strike for your specific door frame material (aluminum, hollow metal, or wood) and match the case size of the strike to your existing frame cutout. If you don't find a case size that matches, choose a strike with a case size smaller than your cutout.

3. Maximum Latch Length— The latch fits inside the electric strike, so you need a strike that is deep enough to accommodate the portion of the latch that extends from the door.

4. Voltage & Current (Type)— Select an electric strike with the correct voltage. You may need to use a transformer and a rectifier in series to convert 120 VAC to lower DC power. Style A and B strikes on this page allow you to select 12 VDC or 24 VDC during installation.

Electric Strikes

Electric strikes take the place of a standard strike plate in a door frame. They control access by either holding or releasing a latch bolt. Hardwire electric strikes to a power source and a controller (typically a push-button switch, keypad, or card reader).

Strikes are reversible for right- and left-hand doors. Furnished with mounting screws and instructions, unless stated. ***Styles A-E*** meet UL 1034 for burglary resistance.

Styles A and B allow you to select voltage and power-fail lock (to meet fire code requirements) or power-fail open operation. In power-fail lock operation, a power failure causes the latch-holding device to keep the latch engaged and the door locked. In power-fail open operation, a power failure causes the latch-holding device to release the latch and unlock the door. Styles C-H have power-fail lock operation.

A&B Regular Duty Electric Strikes— Max. holding force is 1,000 lbs. *Style A* includes two face plates to fit most frame cutouts. *Style B* includes three face plates to fit most frame cutouts.

C-E Heavy Duty Electric Strikes— For use in high traffic areas. Max. holding force is 1,500 lbs. *Style D* is for mortise locks with up to a 1″ deadbolt. Includes a face plate to accommodate a variety of latch positions. UL 10C listed for three-hour fire door assemblies.

F-H Low Voltage Electric Strikes— For replacing existing electric strikes in low voltage systems such as intercom systems and other specialty applications. Maximum holding force is 1,000 lbs. *Style F* requires #8 wood screws (not included). *Style G* requires #8 wood screws or 10-32 sheet metal screws (not included). *Style H* is for latches that surface mount on the face of the door and do not have a strike plate in the door frame.

Transformers— Convert 120 VAC to lower AC voltage. UL listed, except 81395A65, which is UL recognized. ***Rectifiers—*** Convert AC power to DC. ***Push-Button Controller—*** Has screw terminals with normally open contacts and wires to strike for latch release. For other push-button controllers, see pg. 2913. ***Remote Controller—*** Opens strike remotely. Includes digital receiver that's wall mountable and a mini transmitter. ***Buzzer—*** Allows strike to buzz when activated.

Keypad Alarm and Door Control

Hardwire this keypad to alarm systems, motion detectors, door strikes, and control equipment. Just enter your four-digit code to activate the control; all personnel share the same code. Authorized individuals can change the combination without disconnecting any input wiring. When the keypad is wired to an alarm system, three LED lights indicate system status. Designed for surface mounting; it can be mounted to a single gang electrical box. Unit draws 6 or 12 VDC power from your alarm panel. Housing is made of white plastic; size is 4 1/4″ Ht.×3 1/4″ Wd.×1″ Dp. Instructions are included.

8056A38 ..... $96.85

Weather-Resistant Keypad Control

Punch in your 3-8 digit code to control any electric strike, electromagnetic lock, or garage door opener. Keypad supports up to six codes at one time. Add or change codes from the keypad. Codes remain in memory if power is interrupted. Standby power requires a gel cell battery backup system (sold separately). Built to mount outdoors, keypad is weather resistant and made of stainless steel; size is 6⅝″ Ht.×2¼″ Wd.×½″ Dp. Control box is black plastic and mounts indoors; size is 5½″ Ht.×7½″ Wd.×2½″ Dp. Furnished with mounting hardware, instructions, and a 15-ft., 9/32″ dia. cable to connect keypad and control box. The control box requires a plug-in, ***step-down transformer*** for converting 120 VAC to 12 or 24 VAC (sold separately). Control box has two relays, which allow the additional output to be used for a second entranceway. An ***additional keypad*** requires a 15-ft. cable (sold separately) to connect to the system.

Electromagnetic Gate Lock

Designed for outdoor swinging and sliding gates, this lock has a hard-anodized aluminum housing and nickel-plated exposed locking surfaces for weather resistance. Requires a 12/24 VDC power supply (sold separately); power supply operates on 120/240 VAC, 50/60 Hz; output current is 2 amps. Electromagnetic lock is 11″ Lg.×3″ Wd.×1¾″ Dp. Strike plate is 8¾″ Lg.×2¼″ Wd.×⅞″ Dp. Includes mounting brackets for installation, nine 16″ long wire leads, and a ½″ connector for conduit.

Holding Strength, lbs.	Required Amps 12 VDC	Required Amps 24 VDC		
1,500	0.65	0.35	**13585A49**	$465.60
Power Supply			**1251A12**	259.20

Electromagnetic Door Locks

Use these powerful, low-maintenance locks to hold doors closed. Locks instantly release when power is interrupted. Operate on 12 VDC or 24 VDC. Use electromagnetic door locks alone or connect them to access-control and fire-protection systems. However, to meet fire codes, the door must have a latching device, such as a doorknob or lever lockset, to hold it closed when the power is cut during an emergency and the lock releases. Mounting hardware and instructions are included.

Control locks with a door switch, card reader, key-operated switch, or push-button switch. Lock with 300 lbs. of holding strength is ideal for small enclosures. All other locks are for high-security doors and meet ANSI/BHMA (Builders Hardware Manufacturers Association) A156.23 for electromagnetic locks.

Locks with time delay and status sensor have an adjustable time delay from 0.5 to 30 seconds and indicate whether the door is opened or closed. When door is closed the locks indicate a proper bond between magnet and strike, assuring door is locked. Locks can be monitored remotely. *Lock with delayed egress* postpones unlocking for up to 30 seconds to delay the exit of unauthorized individuals and includes an audible alarm. Designed to meet NFPA 101 Life Safety Code and BOCA (Buildings Officials and Code Administrators) standards.

Locks with mounting ***Style A*** mount on the door frame header. For locks with 500 lbs. and 1,500 lbs. of holding force, a ⅝″ thick filler plate (sold separately) is needed if the mounting surface on the frame is less than 2″. Double-door model comes with two strike plates and controls two doors at once as long as there is no vertical center support between doors. Locks with mounting ***Style B*** mount above door and include a mounting bracket that extends the strike plate above the door.

Power supply (sold separately) is field-selectable for 12 VDC or 24 VDC. Operates on 120/240 VAC, 50/60 Hz; output current is 2 amps. Includes a switching transformer with overload protection and six screw terminal connections. Housed in a NEMA 1 key locking enclosure for indoor use. UL listed. *Backup battery pack* (sold separately) supplies power when electricity goes out.

Push-Button and Key-Activated Door Switches

You'll find these switches working in combination with electromagnetic locks, electric strikes, and automatic door openers. All switches are UL listed. Push-button switches are also CSA certified. Style 1 switches come with machine screws. Styles 2-5 include spanner head screws (to prevent tampering); Styles 3-5 also include an installation tool.

Instant open switches provide immediate access. ***Time delay*** switches allow time to reach the door before it opens. ***Turn-to-open/turn-to-close*** switch operates by turning the key to open the door and turning the key again to close the door.

(1&2) "Exit" Push-Buttons— Have a red, mushroom-shaped button and screw terminal connections. Style 1 has a Type 304 stainless steel plate. Style 2 has an aluminum plate.

(3&4) "Push to Open" Push-Buttons with ADA Symbol— Both styles are made of Type 304 stainless steel and have screw terminal connections.

(5) Key Activated— Often used to reset fire panels. All have crimp-on wire connectors. Plate has a dull aluminum finish. Lock and key not included. Use a 1¼″ long mortise lock with standard cam (see pg. 2922).

About Selecting a Door Closer

Regular Arm Mount

Parallel Arm Mount

Top Frame Mount

TOP VIEW OF SWINGING DOOR

If you're replacing your current door closer, remove the cover and look for the model number and mounting hole pattern. We provide this information for all of our closers, so you can find a match and eliminate the need to drill new holes. If you don't find a match or don't have access to the model number and/or mounting hole information for your current closer, we offer a universal closer that is compatible with the mounting hole patterns of many popular models (see page 2917). If you're searching for a closer for a new installation, then consider the following factors:

1. *How much traffic and abuse does the closer need to withstand?* Closers that meet ANSI Grade 1 standards are rated to 2,000,000 cycles. ANSI Grade 2 closers are rated to 1,000,000 cycles. Although some medium duty and heavy duty closers share an ANSI Grade 1 rating, the heavy duty closers have a more rugged construction to withstand a higher level of abuse.

2. *Consider the size and location of your door.* Choose a closer that will accommodate the width of your door. Most closers have adjustable spring force that allows them to work with a range of door widths. Also, consider whether your door is an interior or an exterior door. Closers for exterior doors are built to withstand the extra strain of wind and drafts.

3. *Do you need to be in compliance with the Americans with Disabilities Act (ADA)? Do you need a hold-open feature?* The spring force of a closer determines the amount of force required to open the door. Most closers allow you to adjust the spring force from 1 to 6 to accommodate a variety of door widths. A spring force of 1 requires the least amount of force to open the door. A spring force of 6 requires the greatest amount of force. When properly installed, the closers that are adjustable to spring force 1 may help you comply with the ADA. These closers are barrier free; they open wide to allow full access through the doorway.

Some closers have a feature that holds the door open. A slight push or pull on the door releases the door and allows it to close. *Note:* Fire-rated doors require a non-hold-open closer.

4. *Which mounting style do you want/need your closer to have?* Most of our closers can be mounted in any of the three mounting styles shown at left (unless noted): Regular arm, parallel arm, and top frame. Closers are also reversible for right-hand and left-hand doors (unless noted).

5. *Consider the adjustability of the closer.* After installing your closer, you might want the ability to adjust how quickly the closer opens and closes the door. As you open a door, the closer provides very little resistance until the door nears its maximum open position. Some closers have an adjustable ***backcheck control*** to add resistance to the closer, slowing the door to a stopped position and protecting door hardware and the wall from damage. When the door is released, it moves at ***main speed*** until it nears the fully closed position. Some closers have adjustable ***latch speed*** to close the door slowly (to prevent slamming) or quickly (to firmly engage the latch mechanism).

Heavy Duty Reversible Door Closers

Shown in Regular Arm Position

Norton Series

Shown in Regular Arm Position

LCN Series

Built to meet ANSI A156.4 Grade 1 standards, these door closers stand up to abuse from frequent openings and closings—they're perfect for entrance doors. Closers are reversible for right- and left-hand doors. Mount in the regular arm, parallel arm, or top frame positions, except where noted. The spring force of the closers is adjustable from 1-6 to fit a range of door widths. Backcheck, main, and latch speeds are adjustable. Mounting hardware and instructions are included.

Non-hold-open closers are UL listed and comply with UL 10C positive pressure fire test.

Norton Door Closers— Can replace Yale 4000 and 4400 models. Closers have a cast aluminum body and a 13⅝″ Lg.×3⅞″ Ht. plastic cover with 2⅛″ projection. For parallel arm mounting, closers require a minimum of 7¼″ of space from top of door. For top frame mounting, the top of the door frame cannot project more than 3″ from the door face.

7500 Series— Can also replace the Norton 7700 series.

CLP-7500 Series— Have built-in door stops to prevent door from opening too far.

LCN Door Closers— Have a cast iron body and plastic cover. For parallel arm mounting, closers require a minimum of 5½″ of space from top of door. For top frame mounting (where applicable), the top of the door frame cannot project more than 2⁹⁄₁₆″ from the door face.

4041XP and ***4041 Super Smoothee Series—*** Can replace the 4010, 4020, and 4110 Smoothee series closers. Cover size is 12¾″ Lg.×3¾″ Ht. with 2¾″ projection. *Delayed closing* models hold door open for up to 60 seconds before closing.

4041XP Cush-n-Stop Series— Have built-in door stops to prevent door from opening too far. Cover is 12¼″ Lg.×3½″ Ht. with 2¼″ projection.

■ Parallel arm mount only.

For information about door closers, see page 2914.

Heavy Duty Nonreversible Door Closers

Use these closers on frequently opened doors; they meet ANSI A156.4 Grade 1 standards. Closers are similar to the units on page 2914, except they're not reversible. You choose a right- or left-handed closer. To find the handing of a door, stand on the side of the door where the door swings away from you—the push side. If it opens to the right, it's a right-hand door; if it opens to the left, it's a left-hand door (see illustration at right).

Spring force is adjustable from 1-5 to fit a range of door widths. Backcheck, main, and latch speeds are adjustable. Closers have a cast iron body and a 12¼″ Lg.×3½″ Ht. plastic cover with 2¼″ projection. Mounting hardware and instructions are included. ***Non-hold-open*** closers are UL listed and comply with UL 10C positive pressure fire test.

These LCN closers can replace LCN 4010N, 4020N, and 4110N series closers.

LCN 4011 Smoothee Series—For regular arm mounting. *Delayed closing* models hold the door open for up to 60 seconds before closing.

LCN 4021 Smoothee Series—For top frame mounting. The top of the frame cannot project more than 2⁹⁄₁₆″ from the door face (to achieve max. door opening).

LCN 4111 Smoothee Series—For parallel arm mounting. Requires a min. of 5⅛″ of space from top of door.

To Order: Please specify finish: aluminum or dark brown.

Medium Duty Slimline Reversible Door Closers

Norton 1600/1601 Series

Norton 8301 Series

LCN 1261 Series

LCN 1460/1461 Series

Use on doors with moderate traffic, such as office doors. Closers meet ANSI A156.4 Grade 1 standards and have a slimline design, so they require less mounting space than most closers. Reversible for right- and left-hand doors. Mount in the regular arm, parallel arm, or top frame positions, except where noted. Backcheck, main, and latch speeds are adjustable. Mounting hardware and instructions are included. ***Non-hold-open*** closers are UL listed and comply with UL 10C positive pressure fire test.

Norton Door Closers—Have a cast aluminum body. For top frame mounting (where applicable), the top of the frame cannot project more than 3″ from the door face (4¼″ for 8301 series hold-open closers) to achieve max. door opening. ***1600/1601 series (all)*** have their moving parts enclosed in the body; size is 9¾″ Lg.×2⅝″ Ht. with 2⅞″ projection. For parallel arm mounting, closers require 5″ of space from top of door. ***8301 series (all)*** closers have a 12¾″ Lg.×2⅞″ Ht. plastic cover with 2⅛″ projection. For parallel arm mounting, closers require 6¼″ of space from top of door.

1600 Series—Can replace the Yale 50, Parker 500, Dorma 640, Taco Brute 50, and Jackson 70. Spring force is not adjustable.

CLP-1600 Series—Have a built-in door stop to prevent door from opening too far. Spring force is not adjustable.

UNI-1600 Series—Have a shock absorber and built-in door stop to prevent door from opening too far. Spring force is not adjustable.

1601 Series—Spring force is adjustable from 3-6.

1601 BF Series—Spring force is adjustable from 1-4. For interior doors only.

8301 Series—Can replace Yale 3000 series. Spring force is adjustable from 1-6.

CLP-8301 Series—Have a built-in door stop to prevent door from opening too far. Spring force is adjustable from 1-6.

LCN Door Closers—Have a cast iron body. For top frame mounting (where applicable), the top of the frame cannot project more than 2½″ from the door face (to achieve max. door opening).

1261 Series—A quick-mount template makes installation fast and easy. Closer body is 10″ Lg.×2⅝″ Ht. with 2⅞″ projection. For parallel arm mounting, closers require 5¼″ of space from top of door. Spring force is adjustable from 1-5.

1460/1461 Series—Have a 12¼″ Lg.×2″ Ht. plastic cover with 2⅜″ projection. For parallel arm mounting, closers require 4⅜″ of space from top of door. Spring force is adjustable from 1-6. *Delayed closing* units hold door open for up to 60 seconds before closing. *Cush-n-stop series* units have a built-in door stop to prevent door from opening too far.

To Order: Please specify finish: aluminum or dark brown.

For information about door closers, see page 2914.

Light Duty Reversible Door Closers

1700 Series Shown in Regular Arm Position

9300 Series Shown in Regular Arm Position

A light duty version of the closers on the previous pages, these are for doors with infrequent traffic, such as storage room doors. Reversible for right- and left-hand doors. Mount in regular arm, parallel arm, or top frame position. Spring force is not adjustable. Backcheck and latch speeds are adjustable. Bodies are aluminum alloy. Mounting hardware and instructions are included. ***Non-hold-open*** closers are UL listed and comply with UL 10C positive pressure fire test.

Norton 1700 Series— Meets ANSI A156.4 Grade 2 standards. Can replace Yale 5100 series. Closers have a plastic cover. For parallel arm mounting, non-hold-open closers require a minimum of 4¾″ of space from top of door; hold-open closers require 5″ of space. For top frame mounting, the top of the door frame cannot project more than 4⅞″ from the door face to achieve maximum door opening.

Norton 9300 Series— Meets ANSI A156.4 Grade 3 standards. Can replace Yale 2300, Yale 50, Parker 500, Dorma 640/650, Taco Brute 50, International 50, and Jackson 70 series. For parallel arm mounting, closers require a minimum of 5″ of space from top of door. For top frame mounting, the top of the door frame cannot project more than 2⅞″ from the door face to achieve maximum door opening.

Pot-Belly Reversible Door Closers

Norton 78 Series Shown in Regular Arm Position

Traditional and dependable, these pot-belly closers meet ANSI A156.4 Grade 3 standards. Reversible for right- and left-hand doors, unless noted. Backcheck, main, and latch speeds are adjustable. Housing is cast aluminum with a dull bronze finish; size is 7½″ Lg. × 5⅛″ Ht. with 3½″ projection. Mounting hardware is included. Closers for interior door widths 21″-48″ and 22″-42″ are adjustable for spring force from 2-4. Closers for interior door widths 49″-54″ and 43″-52″ are adjustable for spring forces 5 and 6.

Non-hold-open closers are UL listed and comply with UL 10C positive pressure fire test. Non-hold-open closers with parallel arm mounting require a minimum of 5¾″ of space from top of door.

Hold-open closers with parallel arm mounting 1454A65 and A75 require a minimum of 7¼″ of space from top of door. 8084A17 and A18 require a minimum of 5¾″ of space from top of door.

Top frame mounting bracket allows regular arm closers to mount to the underside of the top door frame when space is limited.

■ **To Order:** Please specify right- or left-hand door (see illustration at the top of page 2915).

Rixson-Firemark Fire Alarm Activated Door Holders and Closers

Holder/Closer

Regular Arm *Parallel Arm*

Holders keep doors open until your fire alarm system activates them. Units wire directly into your fire alarm system and have an aluminum finish. Mounting hardware and instructions are included. All conform to National Fire Protection Association (NFPA) Specifications 101 and 80. UL listed.

Door Holders/Closers— Reversible for right- and left-hand doors. Units hold doors open from 85° to 135°. When activated by a fire alarm, units close door. Mount to the top of the door frame and to the face of the door. Choose regular arm or parallel arm (see diagrams at left). Holder assembly requires 2″ of frame above door for mounting. Holder is steel; closer is aluminum. Meet ANSI 156.15 Grade 1 standards.

Regular Arm Holders/Closers— Frame cannot project more than ⅛″ from door face.

Parallel Arm Holders/Closers— Frame cannot project more than 3½″ from door face.

Door Holder— Useful when your door already has a closer. This unit works the same as the holders/closers above, but without the closing function. Holder keeps doors open by using an electromagnet. When activated by a fire alarm, the magnet shuts off and releases the door. Holder is furnished with a plastic wall plate with metal bracket and a plastic door plate with metal bracket. Mount the electromagnet in an electrical outlet box or use the ***wall-mount adapter box***, sold separately. Adapter box mounts directly to the wall using fasteners from the door holder.

Door Holders/Closers

For information about door closers, see page 2914.

Universal Reversible Door Closer

Universal Mounting Plate

With this closer, you won't have to drill new holes in your door. A universal mounting plate allows you to replace medium duty and heavy duty closers from most major manufacturers, including Corbin Russwin, Dorma, Dor-O-Matic, LCN, Norton, and Yale. Closer meets ANSI A156.4 Grade 1 standards.

Reversible for right- and left-hand doors. Mount in the regular arm, parallel arm, or top frame position. Spring force is adjustable from 1-6 to fit a range of door widths. Backcheck, main, and latch speeds are adjustable. Closer is aluminum and has a 13¼″ Lg.×3″ Ht. plastic cover with a 2⅛″ projection. Comes with mounting screws. UL listed.

Door Width Interior	Door Width Exterior	Max. Door Opening		Non-Hold Open
24″-60″	24″-48″	180°	2008A11	$126.00

Door and Gate Springs

Extension Springs— Mount horizontally to top of door. Hook one end of spring to the door or gate and the other to the frame. Springs retract to pull the door or gate closed. Made of high-carbon steel wire. Style 1 has two looped ends and does not have adjustable closing force. Style 2 has two springs that thread into each other; turn the smaller spring to change the overall length and adjust the closing force.

Torsion Springs— Mount springs parallel to the side of door or gate; one end mounts to door, the other end mounts to frame. Adjust the tension of these high-grade steel wire springs by winding or unwinding them. Mounting hardware included.

Extension Springs

Weather-Resistant Hydraulic Door Closer

Unaffected by weather, this unit gently closes interior and exterior doors and gates that weigh up to 150 lbs. Closer has a hold-open feature to keep doors open—great for delivery entrances. Max. door opening is 90°. Reversible for right- and left-hand doors. Main speed is adjustable. Mounts directly on door or gate to keep hinges free from any strain or pressure. Closer has a steel body with a painted black finish. Size is 13″ Lg.×7½″ Ht. with 2½″ projection. Furnished with mounting hardware and instructions. Bracket may be welded if desired.

1469A31 ..... $88.15

Spring Door Closers

Close lightweight doors such as screen and storm doors. These closers are reversible for right- and left-hand doors. Main speed is adjustable. Mounting hardware and instructions are included.

Standard— Closers are pneumatic and have an external spring to prevent the rod from overextending. Closers are steel. Engage the hold open feature by moving washer up against the cylinder. Require a minimum of 3″ clearance between doors for mounting. Cylinder is 1¼″ dia.

Spring Assist— This pneumatic closer uses a tension spring to close heavier doors securely. Closer is steel. Engage the hold open feature by moving washer up against the cylinder. Requires a minimum of 2¾″ clearance between doors for mounting. Cylinder is 1½″ dia.

Low Profile— Ideal for use between doors, these closers require a minimum of 2⅛″ clearance between doors for mounting. Closers have a gas spring. Mount on push and pull sides. Housing is aluminum; size is 9½″ Lg.×1¾″ Ht. with a 2″ projection. UL listed.

	Max. Door Opening	Aluminum Finish		Black Powder-Coated Finish	
Standard	90°	1448A11	$13.14	1448A12	$13.14
Spring Assist	90°	—	—	1446A9	38.24

Hydraulic Door Closers

Steel Body Shown in Regular Arm Position

Aluminum Body Shown in Parallel Arm Position

Use these hydraulic closers on lightweight doors, screen doors, and gates. Reversible for right- and left-hand doors. Mount in regular arm or parallel arm positions. Spring force is not adjustable. Furnished with mounting hardware and instructions.

Steel Body— Once installed, this sealed hydraulic closer doesn't require maintenance. Closer has a gray prime-coat finish. UL listed.

Cast Aluminum Body— Main speed is adjustable. Requires 2¾″ clearance between doors for mounting.

Max. Door Opening	Max. Door Weight		
Steel Body— *4¼″ Ht.×3½″ Wd.×2″ Proj.*			
140°	85 lbs.	1252A12	$75.33

180°	35 lbs.	1255A14	45.91

Side-Frame Roller Door Closers

At just 4½″ Ht.×1″ Wd. with a 1⅜″ projection, closers are for use on lightweight doors, screen doors, and gates. Vertically mount closers to the door frame on the hinged side of the door. After the door is opened, the roller arm rolls along the door to automatically push it closed. Reversible for right- and left-hand doors. Main speed is adjustable. Door frame must be flat for proper mounting. Housing is die cast zinc with painted finish. Mounting hardware is included. UL listed.

Max. Door Opening	Max. Door Weight	Brown Finish		White Finish	
135°	150 lbs.	1234A82	$14.85	1234A83	$14.85

Heavy Duty Spring-Loaded Door Closer

Built to handle cold storage doors and other doors between 200 and 1,000 lbs. This closer has variable spring tension to control main speed. Reversible for right- and left-hand doors.

Surface mount just above lower hinge. Maximum offset from door face to surface of door frame is ⅞″. Closer is malleable iron with steel rod; closer has a zinc-plated finish. Mounting hardware is included.

Max. Door Opening	Proj.		
150°	2 13/32″	1261A22	$458.73

Roll-to-Latch Door Holders

Hydraulic (Flush) *Spring (Offset)*

As the door closes, the holder arm rolls into the catch to secure the door. A firm tug releases the roller and opens the door. Suitable for walk-in cold storage rooms and freezers. Reversible for right- and left-hand doors. Mounting hardware is included. Use ***flush style*** when your closed door is even with its frame. Use ***1 1/8″ offset style*** for doors that have 7/8″ to 1 1/8″ of space between the frame and the door face when closed.

Hydraulic—*Steel* housing has a polished chrome finish and protects a gas-filled hydraulic cylinder. *Type 304 stainless steel* housing has a polished finish and protects a fluid-filled hydraulic cylinder.

Spring Loaded with Steel Housing— Holders have a spring mechanism protected by a plastic cover.

	O'all Size, Lg. × Wd. × Proj.	Flush		1 1/8″ Offset	
Hydraulic w/Steel Housing	10 1/8″ × 2 1/2″ × 2 5/16″	11935A72	$168.72	11935A73	$173.93
Hydraulic w/Type 304 SS Housing	7 1/2″ × 1 7/8″ × 1 3/8″	11935A84	180.00	—	—

★ Projection is 2 13/16″.

Hinge Pin Door Holder

This holder takes the place of one or more of your existing hinge pins. Adjustable tension controls the main speed. Holder fits all 3 1/2″ × 3 1/2″ and 4″ × 4″ hinges. Overall size is 15/64″ Dia. × 5 1/2″ Lg. Cap projection is 2 5/16″. Made of steel with a brass finish. Not rated for door size and weight.

1490A11 ..... $8.54

Roll-Up and Sectional Door Openers

Right-Side Mount for Rolling Door

Also known as jackshafts, these door openers work with face-mounted 20-ga. or thinner doors. When the friction clutch is adjusted properly, it will "slip" if the door encounters an obstruction when closing. This stops the downward progress of the door and prevents damage to door and motor. Two safety photo eyes housed in a water-tight casing with heavy gauge metal mounting brackets are also included. Any object passing through the eye beam stops and reverses the motion of a descending door. Controllers have three buttons (open, close, and stop) and mount to a wall. They're wired to the opener and run on 24 VAC.

Openers have a heavy duty 1/2-hp motor that runs on 115 VAC, 60 Hz, 6.5 amps. Motor is capable of 12 cycles per hour, up to 50 cycles per day. During a power failure, use the manual chain hoist to move door. Chain hangs 12 feet below hoist. Openers have an 11-ga. steel frame with a black powder-coated finish. They are 18 1/2″ Ht. × 15 3/4″ Wd. × 9 1/4″ Dp. and work with doors that are a maximum 14 ft. Ht. × 14 ft. Wd. Each opener has a 1/4″ keyway, 1″ drive shaft, and #41 chain. Meet UL 325.

When facing the operating side of the door, ***right-side mount*** is on your right, ***left-side mount*** is on your left. For remote control operation, order the ***optional transmitter*** (sold separately below) for use with the included receiver. Transmitter has three buttons (open, close, and stop) and is powered by a 12-volt battery (included).

For Door Style	Right-Side Mount		Left-Side Mount	
Rolling Steel	12185A71	$652.90	12185A72	$652.90
Sectional Steel	12185A81	652.90	12185A82	652.90
Optional Remote Control Transmitter	1221A71	$37.90		

Chain Door Openers

We offer these openers with a solid hub that you can bore to the size you need. Chain (sold separately) is low carbon steel with zinc plating. *Note:* All openers are designed for use only with chain listed—do not substitute other chain.

Openers with Non-Load-Rated Hand Chain— Designed for opening, but not supporting, the weight of the door. Ideal for opening and closing independently supported overhead doors and furnace doors.

Openers with Load-Rated Chain— For operating heavy sliding doors, sliding windows, and power-operated garage doors.

To Order: For chain, please specify length.

● Pitch Diameter=diameter at midpoint of chain. ♠ Hub has a spoked design (not illustrated).

UL Listed Fusible Links

The high temperatures of a fire will melt the solder alloy bond between links. The link halves then separate, releasing overhead fire doors, windows, and lids. Install with S-hooks or chain (not included). Links should be replaced annually to ensure safety. To choose the proper links, refer to the fusing temperature and load rating listed below. UL listed. ***Double-link set*** is recommended for heavier loads.

Note: Links are designed for a straight-pull application only. Do not paint or coat.

Overhead-Door Openers

Open, close, and stop overhead doors with the touch of a button. Use this chain-drive system (push-button control, motor, and operator) on standard sectional doors made from fiberglass, aluminum, wood, and up to 16-ga. insulated steel. Openers move doors approximately 8-12 in./sec. If the door makes contact with an obstruction when closing, the friction clutch stops the door operator immediately. Two safety photo eyes housed in a water-tight casing with heavy gauge metal mounting brackets are also included. Any object passing through the eye beam stops and reverses the motion of a descending door. Replacement eyes are sold separately below. Operator has an emergency disconnect for manual operation. Units have a black powder-coated finish. Meet UL 325 for commercial use (not for residential use).

The push-button control has three push-and-hold buttons (open, close, and stop) and operates on 24 VAC. Size is 5¼″ Ht.×2⅜″ Wd.×1¾″ Dp. The built-in logic control board has a maintenance alert signal you can set for a designated maintenance cycle. Also allows programming of maximum run time and time delay before reversing direction, as well as setting a midway stop point.

Motor is rated continuous duty and has overload protection to prevent overheating.

Operator is 20½″ Lg.×13⁵⁄₆₄″ Wd.×11⅝″ Ht. and requires a minimum of 4″ clearance above the door. Furnished with an 11-ga. steel track that has nylon chain guides for quiet, smooth operation. Track is sized for the max. door height; trim the track for shorter doors. The quick-mount header bracket allows fast installation.

For remote control operation, order the ***optional transmitter*** (sold separately below) for use with the included receiver. Transmitter has three buttons (open, close, and stop) and is powered by a 12-volt battery (included).

Remote Control Transmitter and Receiver for Overhead Doors

Open your doors by remote control using our matched transmitter and receiver. Also can be used for remote control in other open/close, up/down, and start/stop applications.

Transmitter has three buttons for open, close, and stop functions. Just set the DIP switch to match the code on your opener or receiver. Transmitter can be hand-held or mounted on your vehicle's dash or sun visor. Powered by a 12-volt battery (included).

Receiver wires directly to opener for its power supply. For 24 VAC/DC operations. Housing is aluminum.

Remote Control Transmitters and Receivers for Garage Doors

One-Button Transmitter

Two-Button Transmitter

Mini Transmitter with Rolling Code

Receiver 8129A57

Transmitter 8129A16

Keypad Transmitter

Team a matching transmitter and receiver to remotely operate your door opener. We offer transmitters and receivers that work with Chamberlain, Craftsman, and Liftmaster or with Delta, Multi-Code, and Stanley door openers. Choose from three different levels of built-in security—DIP switch, billion code, and rolling code. One-button and two-button transmitters come with a visor clip. Mini transmitter has a ring to attach to your keychain. To replace your current transmitter, identify the transmitter type by the color of the LED light (if applicable).

DIP-Switch Transmitters—The most commonly used transmitter type. Transmitters have a series of DIP switches that can be set to match the code on your opener or receiver. Transmitters ***for Chamberlain, Craftsman, and Liftmaster openers*** include a 12-volt battery. *One-button transmitter* operates one opener and has one set of nine DIP switches. *Two-button transmitter* can operate two devices and has two sets of nine DIP switches. Transmitter ***for Delta, Multi-Code, and Stanley openers*** includes a 9-volt battery. It operates one opener with one set of 10 DIP switches.

Billion-Code Transmitters—Come set to a unique code that is selected out of 3.5 billion possible options (the codes are not re-used). *Two-button transmitter* can operate two devices. One of the buttons uses billion code security and the other button operates with DIP switches. Includes a 3-volt battery. *Keypad transmitter* operates one device and remembers your 4-digit PIN after a power outage. The keypad is backlit for use in the dark. Includes a 9-volt battery.

Rolling-Code Transmitters—Send a different code to the receiver or opener every time the door is opened or closed—the code cannot be duplicated. All include a 3-volt lithium battery, unless noted. *One-button transmitter* operates one device. *Two-button transmitter* can operate two devices. One of the buttons uses rolling code security and the other button uses billion code security. *Mini transmitter* has three buttons to operate up to three devices. *Keypad transmitter* operates one device and remembers your 4-digit PIN after a power outage. Keypad is backlit for use in the dark. Includes a 9-volt battery.

Receivers—Work only with their matching transmitters. *Receiver for Chamberlain, Craftsman, and Liftmaster openers* plugs directly into a 120 VAC, 60 Hz outlet or can be wired directly to the opener for its power supply. Works with one DIP-switch code, 12 billion-code transmitters, eight rolling-code transmitters, or one keypad. *Receiver for Delta, Multi-Code, and Stanley openers* is wired directly to the opener for its power supply. It works with one DIP-switch code and is well-suited for outdoor applications.

About Exit Devices

Side Latch

Mortise

Vertical Rod

In an emergency, exit devices make it easy for occupants to exit quickly and safely. The most common exit devices are touch bars (panic bars) and crossbars. You can add an optional door handle for opening the door from the outside.

Side-latch exit devices mount to the surface of the door and have one latch bolt. The strike plate mounts on the surface of the door frame.

Mortise exit devices have a latching mechanism that is recessed into the door. The latch bolt projects into the strike plate, which is recessed into the door frame. In crossbar style only.

Vertical-rod exit devices mount to the surface of the door and have two latch bolts. One latch bolt extends above the top of the door and the other extends below the base of the door. Strike plates mount on the top of the door frame and on the floor.

Stainless Steel Touch Bar Exit Devices

Side Latch

Ball Knob

Lever

Pull Handle — Pull w/ Lock

Get the corrosion resistance of stainless steel and the convenience of touch bar styling. All external exit device parts are 18-8 stainless steel with a dull finish. For use on 1¾″ thick doors up to 8 feet high. Reversible for right- and left-hand doors. You can use the built-in hold-down feature to keep the door in the unlatched position, allowing traffic to enter and exit freely. Deadlocking latch bolts prevent latch tampering.

Devices surface mount and can be cut to fit door width. Housing requires a 3½″ wide mounting surface. Bars project 2¼″ from face of door. Latch bolts project ¾″. Mounting screws, strike plate, and instructions are included. UL listed. Use devices alone or pair them with handles surface mounted on the outside of the door.

Touch Bar Exit Devices

Slight pressure on the touch bar releases the latch bolt. Devices fit 1¾″ and 2¼″ thick doors up to 7 feet high. Reversible for right- and left-hand doors. Use the built-in hold-down feature to keep door unlatched, allowing traffic to enter and exit freely; fire-rated exit device does not have a hold-down feature. Deadlocking latch bolts prevent latch tampering.

Devices and handles surface mount. Touch bars project 3 13/16″ from face of door. Latch bolts project ¾″ for side-latch devices; ⅝″ for vertical-rod devices. Devices can be cut to fit door width. Mounting hardware, strike plate, and instructions are included. UL listed. Devices meet ANSI A156.3 Grade 1 standards. For double doors, order two of each exit device. A removable center support for double doors is sold separately.

Use exit devices alone or pair them with handles mounted on the outside of the door. Handles (except pull handles) include a Schlage C style keyway and two keys. Heavy duty lockset accepts a small-format interchangeable core.

Standard Duty Exit Devices—Housings and touch bars are steel. Housing on side-latch devices requires a 4¾″ wide mounting surface; housing on vertical-rod devices requires a 3⅝″ wide mounting surface.

Heavy Duty Exit Devices—Housings are aluminum. Devices with aluminum and dull chrome finishes have stainless steel touch bars; dull bronze and dark brown finishes have steel touch bars. All have a hydraulic noise-damping feature. Housing on side-latch devices requires a 4½″ wide mounting surface; housing on vertical-rod devices requires a 3 11/16″ wide mounting surface. ***Fire-rated exit device*** is UL listed for three-hour "A" labeled fire doors. ***Heavy duty lever handle*** is vandal resistant. When force is applied to the locked handle, the lever drops down into a vertical position so it can't be used for leverage during a forced entry. To reset, lift lever to regular position.

Heavy duty mechanical push-button lockset is exclusively for use with heavy duty side-latch exit devices. It doesn't require electricity or batteries. Enter a 1-5 digit code to unlock the door; there are thousands of combinations. All personnel share the same code. Lockset accepts a small-format interchangeable core (sold separately on page 2910), so you can use a key to override the combination. Reversible for right- and left-hand doors. Housing is 8⅞″ Ht.×4¼″ Wd. and projects 4 1/16″. Finish is dull chrome. Use indoors and outdoors. Temperature range is –30° to +130°F. Meets ANSI A156.2 Grade 1 standards for 800,000 cycles. UL listed for three-hour "A" labeled fire doors. When properly installed, lockset helps you comply with the Americans with Disabilities Act (ADA).

Standard Duty

To Order: Please specify finish: aluminum or dark brown.

Crossbar Exit Devices

Apply slight pressure on the crossbar of these devices to unlatch the door. Devices fit 1¾″ thick, 7-ft. high doors that are up to 4 feet wide. Housings are brass. Crossbars with *dark bronze finish* are made of brass. Crossbars with *dull chrome finish* are stainless steel. The crossbars, made of 1″ OD tubing, can be cut to fit narrower doors. Max. projection from the door face is 5″. Use the built-in hold-down feature to keep the door in the unlatched position, allowing traffic to enter and exit freely. Mounting hardware, strike plate, and instructions are included. UL listed. For double doors, order two of each exit device. A removable center support for double doors is sold separately below.

Use exit devices alone or pair them with door handles mounted on the outside of the door. All handles (except pull handles) come with a Schlage C keyway cylinder and two keys.

Side-latch and ***vertical-rod*** devices are reversible for right- and left-hand doors. Surface mount them on the door. ***Side-latch*** devices require a 4⅜″ wide mounting surface for each housing. ***Vertical-rod*** devices require a 2¹³⁄₁₆″ wide mounting surface for each housing. ***Mortise*** devices are recessed 4½″ into the door and have deadlocking latch bolts to prevent latch tampering. The crossbar latching mechanism is also recessed into the door.

Exit Devices and Handles

To Order: For exit devices, please specify finish: dark bronze or dull chrome. For handles, please specify finish (dark bronze or dull chrome) and style of the exit device on the other side of the door.

Removable Center Support—For Side-Latch and Vertical-Rod Exit Devices

Also known as a mullion, this 7-ft. steel post provides stability and security for double doors. Remove it to let large equipment pass through. Mounting hardware is included. For use with side-latch and vertical-rod exit devices. Support is drilled to accept strike plates included with the exit devices.

Finish		
Aluminum	8080A81	$303.35
Dark Brown	8080A82	303.35

Exit Bar Hold-Down Retainers

Use retainers on exit devices that don't have a built-in hold-down feature. Retainers keep the exit bar in the unlatched position, allowing traffic to enter and exit freely. A push-button release lets you return door to the latched position. Not for use on fire-rated doors. Retainers are made of aluminum. Furnished with an adjusting wrench and mounting hardware. One shim (sold separately) per retainer is required for installation on glass.

For Bar Style	(A)	Min. (B)	Max. (B)		
Round	1¹⁄₁₆″	3¹³⁄₃₂″	4″	8110A11	$55.55
Oval	²⁹⁄₃₂″	2¾″	3¹¹⁄₃₂″	8110A21	43.55
Shim for Installing on Glass Doors				8110A64	10.19

Alarmed Exit Devices

Applying pressure to the push bar retracts the latch from the strike plate and sounds a 95-dB alarm. Alarm sounds until you reset it with the control key. Push bars identify doors as alarmed emergency exits; Styles 1 and 2 are for exit doors that are not required by code to have a crossbar or touch bar. All are reversible for right- and left-hand doors. Housings are aluminum. Alarms operate on a 9-volt battery (included). Surface mount devices to door. Mounting hardware and instructions are included. UL listed. When properly installed, devices help you comply with the Americans with Disabilities Act (ADA).

Style 1—Deadbolt is saw-resistant and extends ¾″ into strike plate.

Styles 2&3—Have a low-battery indicator and a deadlocking latch for tamper resistance. Deadbolt extends 1″ into strike plate. Exit devices ***for exterior weatherproof doors*** are for indoor and outdoor use. Devices are waterproof and can be used in washdown areas. Temperature range is –20° to +140° F.

Note: Devices require a rim cylinder lock to reset the alarm (see 1385A on page 2922). Lock fits into the opening on the face of the device. You can mount an additional 1385A rim cylinder lock on the exterior of the door to use as a door lock.

Replacement 9-Volt Battery				71455K56	2.75	8049A26	18.13

Magnetic Contact Door Alarms

Deter unauthorized use of emergency exit doors—an alarm sounds when the door is opened. Alarm surface mounts on the interior side of the door and magnetic contact mounts on the door frame. The All-in-One alarm also can be mounted on windows. All the alarms are reversible for right- and left-hand doors. For indoor use. Mounting instructions are included.

Standard and ***slimline key-controlled*** alarms require a mortise cylinder lock (sold separately) to arm and disarm the alarm. Order a 1¼″ long mortise cylinder lock 1301A to fit into the face of the alarm. You can mount an optional rim cylinder lock 1385A on the opposite side of the door. Both locks sold separately on this page.

(A) Standard Alarms—Operate on a 6-volt battery (included) and have a low-battery warning. Mounting hardware is included. *Alarm with strobe* has an amber strobe light for visual indication.

(B&C) Slimline Alarms—The slimmer design takes up less space. The alarm sounds and an LED flashes when door is opened. Set alarm to sound continuously for two minutes or announce openings with a two-second tone. Alarms operate on a 9-volt battery (included) and have a low-battery warning and test button. Mounting hardware is included. *Keypad-controlled alarm (C)* has a programmable six-digit keypad to arm and disarm alarm from the inside. Alarm accepts one 3-5 digit code. An *optional keypad (D)* (sold separately) works with the keypad-controlled alarm and has all the features of the inside keypad. It mounts on the opposite side of the door, allowing another entry option.

(E) All-in-One Alarm—This easy-to-install alarm has the magnetic contacts already connected to the alarm system with 10-ft. wire leads. Once triggered, the alarm sounds until you close the door or window and insert the included key into the alarm to reset it. Alarm works on single and double doors and on windows that open inward or outward. Alarm operates on 9 VDC (via a built-in transformer with a 120 VAC power cord) and has battery backup in the event of power failure. Furnished with built-in horn, magnetic contacts, built-in transformer with 120 VAC 5-ft. power cord, two 9-volt batteries, and two keys. Contacts are 2½″ Lg.×½″ Wd.×½″ Proj. Gap distance is ¼″ (the maximum space allowed between the magnet and switch for proper functioning). Mounting hardware not included. Alarm box requires ¼″ machine screws; contacts have ⅛″ dia. mounting holes.

Rim and Mortise Cylinder Locks

Rim Cylinder Lock

Mortise Cylinder Lock

Insert these cylinder locks into exit alarms, exit devices, deadbolts, and mortise locks. Locks are made of solid brass and have a five-pin tumbler locking mechanism. Furnished with two keys. Select the keyway style that matches your keying system. Locks that are ***keyed differently*** each open with a different key. Locks that are ***keyed alike*** open with the same key.

Rim cylinder locks have an adjustable tailpiece to fit doors from 1⅜″ to 2¼″ thick. ***Mortise cylinder locks*** have either a standard cam or a cam specifically for Adams-Rite locks.

To Order: Please specify finish: dull chrome or polished brass.

Rim Cylinder Locks—Use with alarms above and on page 2921

● Recommended for use with alarms on this page.

Hand-Held Metal Detector

Portable, lightweight detector senses metal on individuals without physical contact. When it detects metal, detector gives an audible signal. Runs on a 9-volt battery (sold separately) and has a low-battery warning. Case is high-impact black ABS plastic. The metal detecting face of probe is 8″ long; overall length is 16″. Detects objects from 1″ to 12″ away, depending on the alloy, object size, and search speed.

Metal Detector ..... **6606T64** $142.86
9-Volt Battery ..... **71455K56** 2.75

Entrance and Exit Announcer and Counter

No more surprise guests; a chime announces each visitor walking through the door and a counter keeps track of each entrance and exit. Mount the infrared light beam transmitter and reflector between 3 and 20 feet apart. When a person interrupts the beam, the transmitter sends a signal to the receiver and the chime sounds. System includes a transmitter with four-digit counter, an electronic chime, 26 feet of 24 AWG wire, a plug-in transformer to supply 12 VAC, and a beam reflector. Adjust the chime's volume from 0 to 85 dB. Housing is ABS plastic. Mounting hardware and instructions are included.

Maximum output current is 1.0 amp to power additional chimes. Each chime draws 0.3 amps when activated. Not recommended for outdoor use.

Transmitter is 2²³⁄₃₂″ Ht.×5″ Wd.×2⁷⁄₁₆″ Dp. Chime is 4⁵⁹⁄₆₄″ Ht.×3³⁵⁄₆₄″ Wd.×1½″ Dp. Beam reflector is 1⅞″ Ht.×3¹³⁄₁₆″ Wd.

Announcer System ..... **80405A18** $133.77
Additional Chime ..... **80405A23** 54.60

Magnetic Entrance and Exit Announcer

No electricity, batteries, or wiring—installing this announcer couldn't be easier. Mount the metal contact disc on the door and the announcer with magnet on the door frame. The magnet actuates a pleasant chime when door is opened. A slide control allows you to deactivate the chime. Includes mounting hardware, drill bit, and instructions. Cover is heavy duty brown ABS plastic. Size is 2″ Ht.×5¾″ Wd.×2¾″ Dp. For indoor and outdoor use. Not temp. rated.

8096A61 ..... $35.44

Verbal Alert/Alarm Motion Sensor

Sound an alarm or play a recorded message up to 10 seconds long when someone passes within 10 feet of the motion sensor. Operating temperature range is 40° to 100° F. For indoor use only. Unit has an on/off switch and operates on four AA batteries (not included). Changing batteries does not erase the recorded message. Housing is black ABS plastic and has a keyhole slot for mounting.

	Ht. × Wd. × Dp.		Each
Motion Sensor	4⅜″ × 2½″ × 1¼″	1314A4	$46.80
Replacement AA Batteries (4/Pkg.)		71455K53 Pkg.	$2.94

Infrared Motion Sensor

When this sensor detects an object with a temperature that differs from the ambient temperature, it sends a signal to your existing alarm system. Wire sensor into your alarm; it operates on 10-16 VDC. Operating temperature range is 14° to 122° F. For indoor use only.

Sensor covers a 90° area that's 40 feet high and 40 feet wide. It can be set to ignore objects that weigh less than 30 lbs. Housing is white ABS plastic. Mount from 7 to 9 feet high. Mounting hardware is included. UL listed.

Range	Ht. × Wd. × Dp.		
40 ft. × 40 ft.	2 11/16″ × 3 3/64″ × 1 29/32″	8068A85	$21.04

Magnetic Contacts

Wire these magnetic contacts to your alarm or monitoring system to detect door and window openings. When the door magnet moves away from the frame magnet, a signal is sent to your system. Gap distance is the maximum space allowed between the magnet and switch for proper functioning. A wider gap distance compensates for loose and ill-fitting doors without triggering false alarms. Switches are hermetically sealed (unless noted) for corrosion resistance in moist and dusty areas. UL listed. *Note:* If current exceeds max. amps, the switch can burn out.

Surface-mounted plastic contacts are furnished with mounting screws, except 8039A21 is adhesive backed for mounting and has 12″ long wire leads. For indoor use.

Surface-mounted aluminum and ***floor-mounted*** contacts have 3 feet of flexible stainless steel conduit permanently attached to the switch housing. Mounting screws are included. For indoor use.

Mortise-mounted contacts mount in ⅜″ dia. drilled holes on the door frame and door. Contacts sit flush with surface and have 24″ long wire leads. Mounting screws not included. Use indoors and outdoors. Not rated for temperature.

Contacts ***for roll-up and overhead doors*** mount directly to track or channel and overhead door. Furnished with mounting hardware and stainless steel armored cable. Use indoors and outdoors. Not rated for temp. 80425A31 has a 2-ft. long cable; 80535A42 has a 1½-ft. long cable.

Closed-Loop Style— For wiring magnetic contacts to alarms. Switch is closed when magnet is in proximity.

Single-Pole Double-Throw (SPDT) Style— For wiring magnetic contacts to an alarm system and another item such as a motion detector.

Electronic Watchmen's Clocks

Are your security guards making their scheduled rounds? Here's how to be sure. Lay out a tour path of touch buttons. Guards carry an electronic clock to each touch button location. Each button has a unique identifier and touching the clock to the button records the location, date, and time. Clock stores up to 5,400 reads and operates on a 3-volt lithium battery (included). After collecting data, you can return the clock to the base station and use the included software to transfer data to your PC (requires Windows NT, 95 or later). Clock is 15/16″ Dia. × 5⅛″ Lg. Mounting brackets for touch buttons are 1 55/64″ Lg. × 1 7/32″ Wd. Complete kit includes an electronic clock, leather holster, 11 touch buttons with mounting brackets, a two-clock capacity base station, 9-pin cables to connect to a PC, and software. Mounting brackets for touch buttons require two #10 screws (not included).

Closed-Circuit Video Surveillance System

A closed-circuit video surveillance system can be as simple as a camera and a monitor. Add a digital video recorder or use a switcher and quad splitter to link up to four cameras to view multiple areas. Create your own system using the components below.

Cameras— Cameras have a 1/3″ image format and backlight compensation for use in brightly lit areas such as doorways and loading docks. All cameras record in color and have BNC video connections. Require a 120 VAC to 24 VAC transformer and conductor cords, sold separately. Operating temperature is –4° to +122°F.

Standard Camera— Lens has variable focal length from 2.8-10 mm. It automatically adjusts for areas with variable, direct, or indirect light. Housing is steel with a beige finish. There are 1/4″-20 threaded holes on top and bottom for attaching a camera mount. For indoor and outdoor use; outdoor use requires outdoor camera housing (sold separately).

Dome Camera— Inside the dome is a camera that pans 360° and tilts 90°. Lens has variable focal length from 2.6-6 mm and manual lens adjustment where light conditions are constant. Housing is cast aluminum with a white finish. Dome is polycarbonate. Mounting hardware is included. For indoor use.

Transformer (Required)— Convert 120 VAC to 24 VAC. Wire to screw terminals on camera using two conductor cords (sold separately).

Transformer (Required)			
For Standard and Dome Cameras Above		**56735T98**	41.20

Outdoor Camera Housing— Fits standard camera above. Housing is aluminum with a gray finish and has liquid-tight cable fittings. Windows are glass. O'all size is 18 29/32″ Lg.×6 3/4″ Wd.×5″ Ht. Includes a heater and the required 120 VAC to 24 VAC transformer. Operating temperature is –4° to +131°F.

	Fits Max. Camera Size (Including Lens)		
Housing	10 5/16″ Lg.×3 3/16″ Wd.×3 1/2″ Ht.	**56735T16**	$262.18

Indoor/Outdoor Camera Mounts— Mounts are aluminum with a beige finish and have adjustable heads. They pan 360° and tilt 180°. When using mounts outside, combine them with the outdoor camera housing above. Base has four 5/16″ dia. mounting holes. Mounting hardware not included.

	O'all Ht.	Max. Cap., lbs.		
Pedestal Mount	8″	20	**56735T18**	$56.18
Wall Mount	12″	20	**56735T19**	46.81

Digital Video Recorder— Records continuously from up to four cameras in real time and keeps recording during playback of past recordings. Recorder can be wired to alarms and motion detectors. A built-in search function allows you to find specific dates, times, and alarm or motion events. Has 500 GB of storage to record approximately 30 days of high-quality video and audio. Also has a USB port, BNC video connections, and RCA audio connections. Housing is steel. Recorder has browser-based remote viewing capability (Windows 2000 and XP compatible), and is 3″ Ht.×14″ Wd.×14″ Dp. Operates on 120-230 VAC with 12-ft. cord and plug. UL listed.

56735T26 ..... $670.51

LCD Video Monitors— These color monitors have contrast and brightness adjustment and one VGA connection. Operate on 100-240 VAC with a 6-ft. cord and plug. Housing is steel with a black finish.

Note: A BNC to VGA converter (sold separately below) is required when using these monitors with other items on this page.

Diagonal	Max. Resolution	O'all Size, Ht.×Wd.×Dp.		
17″	1,280×1,024	14 19/32″×14 13/16″×6 5/16″	**56735T94**	$163.32

22″	1,680×1,050	15 3/4″ ×20 3/8″ ×7″	**56735T33**	264.65

BNC to VGA Converter— View images from your security camera on any monitor with a VGA connection. Multiple input ports allow a single monitor to be used with a camera and a PC. Use the BNC input to connect to a closed-circuit camera. The optional VGA pass-through connects a PC to the monitor. Simply press the input button to switch between sources. The converter includes a 5 VDC power adapter with plug.

56735T89 ..... $39.33

Switcher and Quad Splitter— Use with up to four cameras. Unit can automatically sequence from camera to camera or display real-time color images from two or four cameras at the same time. When the unit is switching from camera to camera, its display time can be adjusted from 1 to 50 seconds. It has an audible alarm for loss of video feed and also includes a feature for motion detection. Unit has BNC video connections and operates on 120 VAC with the included adapter. Housing is steel with a tan finish. Size is 1 3/4″ Ht.×8 1/2″ Wd.×5 1/2″ Dp.

56735T36 ..... $146.65

Wiring Accessories

Conductor Cord— Use to connect camera to transformer. Made of 18-ga., 2-wire, insulated solid copper cable. UL listed.

RG 6/U Cable— This coaxial cable is required for each video data connection between the camera, digital video recorder, switcher and quad splitter, and monitor.

BNC Connectors— Required on each end of the RG 6/U cable.

Conductor Cord	**72195K64**	**Per Ft.**	1-249	$0.23	250-Up	$0.18
RG 6/U Cable	**7032K5**	**Per Ft.**	1-99	$0.22	100-Up	$0.18
BNC Connectors (5/Pkg.)	**71115K34**	**Pkg.**	$14.30			

Wireless Transmitter and Receiver—For indoor use

Wireless Transmitter and Receiver— Use this 2.4 GHz transmitter and receiver instead of video cables. Range is 700 feet with unobstructed line of sight. There are four switchable transmitter and receiver channels. Housings are black plastic. Transmitter is 2 3/4″×2 1/4″×3/4″. Receiver is 6″×3 1/2″×1/2″. Transmitter and receiver come with a BNC video input, an RCA audio input, and two 12 VDC power supplies. FCC approved.

56735T93 ..... $154.96

Dummy Surveillance Cameras

Sometimes the illusion is enough. These simulated surveillance cameras include mounting hardware. ***Style A*** is for indoor and outdoor use. ***Style B*** has a flashing "on" light and is for indoor and outdoor use. Operates on two C batteries (sold separately). ***Style C*** is for indoor use. No batteries required.

Key Blanks

Here are the most popular key blanks used when rekeying and making duplicate keys for padlocks, cabinet locks, and door locksets. To determine which key blank you need, look at your key to identify the key number. Blanks are made of nickel-plated brass, except Sargent key blanks are made of nickel-silver and have a gold color.

Also Available: Additional key numbers. Please ask for 10655A271 and specify key number.

Not sure which key number you have? For actual-size drawings for all the key blanks we offer, go to mcmaster.com and search for **10655AAC**.

Extend and Retract Key Holders

A Belt-Clip Holder **B** Belt-Loop Holder **C** **D** with Split Ring

A cable or chain extends for reach and then retracts automatically. No need to detach keys for use. Key end swivels 360°. Cable and chain are stainless steel, unless noted. *Steel holders* are chrome plated. *Plastic holders* are black.

Ball-socket style holders have a slit that allows cable to be pulled out on the side or directly up, relieving stress on the cable. When the cable is fully retracted, the ball locks in place to prevent extension.

Belt-Clip Holders— Hook onto your belt.

360° Belt-Clip Holders— The belt clip hooks onto your belt and rotates 360°. On *steel holders* the belt clip is detachable. *Plastic holder* has a detachable split ring and a locking latch to keep cable extended.

Belt-Loop Holders— Slide onto your belt. *Standard style* fits belts up to 1¾″ wide. *Ball-socket style* fits belts up to 2¼″ wide.

Bolt-Down Holders— Keep important keys and tools from leaving the area. Holders have two mounting tabs with 3⁄16″ dia. holes; two #8 screws are required (not included). Bracket has 3⁄16″ dia. holes.

■ Has 42″ nylon cable.

Key Duplicating Machines

Duplicate your own single- and double-sided keys from brass, nickel-silver, and nickel-plated brass key blanks. Machines accept large-head keys up to 2½″ wide. All machines operate on 120 VAC and have a power cord with plug. Housing is plastic. Machines come with instructions and meet OSHA requirements.

Low-Volume Manual-Guide Machine— For intermittent use. Machine is 1⁄5 hp with 8,000 rpm. Comes with a deburring tool.

Manual-Guide Machine— Designed for constant use. Machine is 1⁄4 hp with 1,725 rpm. Includes a nylon deburring brush.

Automatic Machine— Insert the key blank into the jaws and flip the power switch; the machine does the rest. This unit stands up to constant, heavy duty use. Machine is 1⁄4 hp with 1,725 rpm. Includes a nylon deburring brush.

Also Available: Optional and replacement parts. Please order 1334A2 and specify machine style and part needed: optional side milling slotter, replacement cutting wheel, replacement drive belt, or replacement nylon brush. *Note:* Side milling slotter is not available for the automatic machine; nylon brush is not available for the low-volume manual-guide machine.

Locking Key Holders

A tubular lock with circular keyway protects your keys from being removed and duplicated. The lock is made of aircraft aluminum. All come with two keys.

Flexible Key Holders— Also can be used to secure small tools to workbenches. They have a 1″ Dia.×2 1/8″ Lg. body with a black polyurethane sleeve. Key cable is flexible. It's made of aircraft aluminum that's wrapped in nylon-coated Type 304 stainless steel.

Rigid Choose-a-Color Key Holders— Have a 1″ Dia.×2″ Lg. body with a polyurethane sleeve that's offered in six colors for easy key identification. The ring is rigid and made of Type 304 stainless steel. It's interchangeable, so you can quickly transfer a set of keys from one lock to another. **To Order:** Please specify color: black, blue, green, orange, red, or yellow.

P

Q

R

Store and secure keys and other objects in these lockboxes. *Style K* boxes are for indoor use. *Styles L-R* are for indoor and outdoor use.

(K) Surface-Mount Emergency Key Boxes— For emergency access, break the glass with the attached tool. Boxes come with mounting screws and two keys.

(L) Surface-Mount Key Box with Dial Combination— Includes mounting screws.

(M) Surface-Mount Key Boxes with Push-Button Combination— 13275A44 includes mounting screws. 13275A45 requires 1/4″ mounting screws (not included).

(N) Magnet-Mount Key Box with Dial Combination— Box has a magnet for mounting; can also be mounted with the included adhesive. Temperature range is –4° to +131° F.

(P&Q) Padlock-Style Key Boxes with Combination— Attach like a padlock onto a doorknob. Box and shackle have a black rubber protector. The shackle is 1/4″ dia. and is made of hardened steel. Vertical shackle clearance is 1 3/4″; horizontal shackle clearance is 1 1/2″.

(R) Door-Mount Key Box with Dial Combination— Mounts over the top edge of any door up to 1 7/8″ thick; to secure the box, screw the Type 403 stainless steel bracket into the door (mounting screws are included). Box has plastic on the back to protect your door's surface.

Single-Use Key-Access Boxes

Once you snap the box closed, you have to break it open—it can't be reused. Use for emergency access to keys, access control cards, passwords, and codes. Sign your name in the space provided to ensure the key will not be used and replaced in another box without your knowledge. Made of plastic. Size is 4 3/4″ Ht.×3″ Wd.×3/4″ Dp. **To Order:** Please specify color: blue, clear, red, or yellow.

12665A5 ..... $9.17

For additional key tags, see page 1960.

Locking Key-Control Cabinets

Use a wall-mount cabinet to keep track of loaned keys. Mounting screws are included.

(A) Cabinets with Cam Lock, Slotted Style— All come with consecutively numbered, reusable key tags. Cabinets store one tag per position and accommodate keys up to 3¼″ long. Locks come with two keys. Furnished with "out key" tags (one for every 10 key positions) to hang in place of a loaned key. Made of steel with a powder-coated finish. **To Order:** Please specify color (unless noted): tan or white.

(B) Cabinets with Push-Button Combination Lock, Slotted Style— Access cabinets with a one to five number resettable combination (with 1,081 possible combinations). All come with consecutively numbered, reusable key tags. Cabinets store one tag per position and accommodate keys up to 3″ long. Made of steel with a tan powder-coated finish. Furnished with "out key" tags (one for every 10 key positions) to hang in place of a loaned key.

(C) Cabinet with Cam Lock, Hook Style— Made of beige polypropylene for corrosion resistance. Hooks are consecutively numbered and hold up to four keys. Use with keys up to 2½″ long. Lock comes with two keys. Key tags are sold separately.

(D) Cabinets with Cam Lock, Hook Style— All come with consecutively numbered, reusable key tags. Each hook holds up to five keys and accommodates keys up to 3″ long. Locks come with two keys. Made of steel with a gray powder-coated finish.

(E) Cabinets with Push-Button Combination Lock, Hook Style— Access cabinets with a four to seven number resettable combination (with over 1,000 possible combinations). All come with consecutively numbered, reusable key tags. Cabinets hold keys up to 2⅜″ long and are deep enough to accommodate tags with multiple keys. All are made of steel with a tan powder-coated finish.

Blank Key Tags for Style C Cabinet (Pkg. of 20) **1333A21** $4.83

Loan-One and Keep-One Locking Key-Control Cabinets

Have the convenience of a wall-mount cabinet with a higher level of key-control than one-tag cabinets. Each hook holds two keys—a control key with a permanent tag (once the key is attached to the tag, you may only remove it by destroying the tag) and a duplicate loaner key with a reusable tag. The control key remains in the cabinet when its loaner key is removed. Key tags are hook style and consecutively numbered. Cabinets also include cardboard "out key" tags (a minimum of 250) to hang in place of a loaned key. Made of steel with a gray powder-coated finish. All have four ¼″ mounting holes (screws not included).

Cabinets for Standard-Size Keys— For keys up to 2½″ long. *Cabinets with cam lock* come with two keys. *Cabinets with push-button combination lock* have five push buttons with 2,200 possible combinations.

Cabinets for Large- and Standard-Size Keys— Keep large keys (up to 4″ long) from overlapping and tangling. Cabinets also have hooks for standard keys (up to 2″ long). All have a cam lock and two keys.

Lockout Hasps

Lock out a single energy source on machinery and electrical equipment. Lockouts have multiple holes or a slot to accept multiple employee padlocks. Hasp clearance defines how big of an object the hasp can get around. *Vinyl-coated* styles won't mar surfaces.

Scissor-Action Lockouts—*Lockouts with chain* attach to equipment so they won't get lost. *Lockouts with interlocking hasp* have an overlapping hasp that is difficult to pry open. *Lockouts with label* have a permanent label to record employee's name and department.

♣ Hasp thickness is measured where the hasp overlaps.

Lockout Cables

A convenient way to lock out panel boxes, freestanding equipment, and multiple gate valves. Use cables with one or more padlocks (not included).

Pinch-Point Lockouts— Thread the free end of the cable through the looped end and into the lockout clamping hole; pull tight and close handle to pinch cable. Cable is galvanized steel with a clear nylon jacket. Body is glass-filled nylon. Use padlocks with the shackle dia. listed for proper operation. Instructions are included.

Pull-Tight Lockout— After locking, you can pull the cable tight. Cable is steel with a clear vinyl coating. Body is plastic. Has reusable write-on labels in English, French, and Spanish.

Self-Retracting Lockout— Extend the cable and place its loop in the body opening. Rotate the body to lock. When cable is unlocked, push the button to retract it; cable stores in the body. Cable is red nylon. Body is nylon.

Body Color	No. of Padlock Holes	Padlock Shackle Dia.	5-ft. Cable		10-ft. Cable

Universal Wall Switch Lockouts

Stop personnel from operating toggle- and rocker-style wall switches. To install, mount over your switch's cover plate (using the screws from the cover plate). Then, close the lockout cover and secure it with a padlock (not included; 9/32″ max. shackle dia.) to make the switch inaccessible. You can lock out the switch in either the on or off position. When not in use, the cover flips up to allow normal switch operation.

Cover is an ABS/polycarbonate blend; base is polycarbonate. Overall size is 4 3/4″ Ht.×1 3/4″ Wd.×1″ Dp. Color is red. Comes with English/Spanish and English/French labels.

12135A72 ..... $8.40

For choose-a-color padlocks, see page 2933. For lockout/tagout danger tags, see pages 1895-1896.

Group Lockout Boxes

Lock out a machine with fewer padlocks. Attach one padlock to each energy point; then, place the keys in the lockout box (or use the key return slot). Each employee in the group locks their padlock to the lockout box (instead of each employee locking a padlock to each energy point). You can't access the keys to the machine padlocks until each employee padlock is removed.

Portable Box— Made of steel with a powder-coated finish. Minimum padlock shackle vertical clearance is 5/8″.

Wall-Mount Box— Made of plastic, this box has six removable hooks inside and a plastic window for viewing contents. Box requires three #4 mounting screws (not included).

Portable/Wall-Mount Boxes— Made of steel with a powder-coated finish; handle is Type 302 stainless steel. There are 12 key holders inside. Require four #8 screws (not included) for wall mounting.

Ball Valve Lockouts

A

B

C

(Padlocks Not Included)

Lockouts fit onto ball valves to prevent operation. Color is red.

(A) Slide the lockout onto the valve handle; the valve body prevents the handle from turning. Made of polypropylene. Temperature range is –50° to +360° F.

(B) Slide the lockout onto the valve handle; the valve body prevents the handle from turning. Minimum padlock shackle vertical clearance is 1″. Lockouts are made of steel with a powder-coated finish, except 48635K81 is made of nylon (temperature range is –40° to +248° F).

(C) Close your valve and remove the handle—it stores in the lockout's zippered pouch. To prevent valve operation, the lockout fits around the pipe, covers the valve stem, and secures the pouch's zipper. Minimum padlock shackle vertical clearance is 3/4″. Lockout is plastic; storage pouch is PVC-coated polyester. Furnished with write-on erasable labels in English, French, and Spanish. Temperature range is –40° to +250° F.

Valve Hand Wheel Lockouts

Two Piece

Hinged

Nestable

Cover your valve's hand wheel and secure with a padlock (not included) to prevent accidental opening. For use with gate and globe valves. Temperature range is –50° to +350° F.

Two-Piece Lockout— Fits a wide range of sizes. Made of polypropylene. **To Order:** Please specify color: red or yellow.

Hinged Lockouts— Made of polypropylene. **To Order:** Please specify color: blue, green, red, or yellow.

Nestable Lockouts— Each lockout rotates into itself, making installation in tight spaces easier. Made of red plastic. Furnished with write-on erasable labels in English, French, and Spanish. *Set* comes with one each of the nestable lockouts, which store inside each other.

Air Hose Lockouts

(Padlock Not Included)

Isolate air-powered equipment from a compressed air source. This lockout fits most 1/4″, 3/8″, and 1/2″ male quick-disconnect hose couplings—each arm accepts a different size. Use with one padlock that has either a 1/4″ or 9/32″ shackle dia. Lockout is 3″ across. Made of red plastic. Max. temperature is 482° F.

3423A11 ..... $21.40

Electrical Plug Lockouts

Prevent electrical devices from being energized—lock out the plug so it can't be used.

(D) Put the plug into the cylinder and lock the cover with a single padlock (not included; 5/16″ maximum shackle dia.). Includes two cover plates that fit cords up to 1 1/4″ dia. Fits plugs up to 5 1/2″ Lg.×3″ Wd. Lockout is 3 1/2″ Dia.×6 1/4″ Ht. Made of polypropylene. Color is yellow. Temperature range is 32° to 275° F.

10645A65 ..... $14.75

D
(Padlock Not Included)

(E) Secure a wide range of electrical plugs. Lockout fits a max. plug size of 4 3/4″ Lg.×2 3/4″ Wd., min. plug width of 1 1/2″, and max. cord diameter of 1 1/8″. Accepts up to four padlocks or tagouts (not included; 3/8″ max. shackle dia.). Lockout is 7 1/4″ Lg.×4 1/4″ Wd.×3 1/8″ Dp. Made of UV-stabilized polypropylene. Color is yellow. Temp. range is –20° to +140° F.

15515A41 ..... $23.42

E
(Padlock Not Included)

(F) For security, these lockouts must be put on and removed with a key (two keys are included). They fit over most two- and three-prong standard plugs. Lockouts are 1 3/4″ Lg.×1 1/4″ Wd.×3/4″ Dp. Made of steel with a red ABS plastic housing. Temperature range is –40° to +194° F.

Keyed Lockout	**10715A15**	$16.03
Keyed Lockout—Multiple lockouts open with key no. 4001	**10715A19**	16.03

F

For choose-a-color padlocks, see page 2933. For lockout/tagout danger tags, see pages 1895-1896.

Lockout Sets

Take lockouts wherever you need them—sets come with a convenient pouch, bag, or box for portability. ***Styles A, C,*** and ***D*** include padlocks with a plastic body and a 1/4″ dia. steel shackle; the padlocks come with permanent write-on labels.

Padlocks, hasps, and lockouts are red.

(A) Personal Lockout Set with Padlocks— The padlocks in this set open with the same key. Includes three padlocks, a standard hasp, and 12 tags. Comes in a red nylon waist pouch (not shown).

4974A11 ..... $85.12

(B) Electrical Lockout Set without Padlocks— Includes three wall-switch lockouts, one electrical plug lockout, three universal multipole circuit-breaker lockouts, three 277 VAC no-hole lockouts and cleats, two 480/600 VAC no-hole lockouts and cleats, one 277 VAC cleat, and one 480/600 VAC cleat. Furnished in a black nylon zippered bag (not shown). Each piece accepts one padlock (not included) with a 9/32″ max. shackle diameter.

12865A32 ..... $114.44

(C&D) Electrical and Valve Lockout Sets with Padlocks— Sets include a standard hasp, a snap-on hasp, an adjustable cable lockout, three gate valve lockouts (for hand wheel diameters 1″ to 3″, 2″ to 5″, and 4″ to 6 1/2″), and two ball valve lockouts (fit pipe sizes 3/8″ to 4″; max. 11″ long valve handle). The universal circuit-breaker lockouts included in the sets come in two sizes; they take the place of tie-bar multipole lockouts and 277 VAC and 480/600 VAC no-hole lockouts.

Style C is a personal lockout set; it includes three padlocks that open with the same key. Also includes a circuit breaker padlock, five universal circuit-breaker lockouts, a wall-switch lockout, and 12 tags. Comes in a red polypropylene box (not shown).

4974A13 ..... $266.16

Style D is a group lockout set; it includes six padlocks that each open with a different key. Also includes two circuit breaker padlocks, nine universal circuit-breaker lockouts, two wall-switch lockouts, two plug covers (one for 120/220 VAC plugs and one for 220/550 VAC plugs), and 24 tags. Comes in a red polyester bag (not shown).

4974A15 ..... $386.19

Wall-Mount Lockout Stations

E&F

G

Store group lockout devices in a central location to keep them organized. Stations come with items intended for group lockouts. Each padlock in these sets opens with a different key. Padlocks have a plastic body and a 1/4″ dia. steel shackle. They come with erasable write-on labels. Padlocks, hasps, and lockouts are red.

(E&F) Padlock Lockout Sets— Stations are made of a yellow ABS/polycarbonate blend and have a transparent polycarbonate cover that stays in position when raised. The cover can be locked in the closed position with a padlock (9/32″ max. shackle dia.). Stations require four #6 mounting screws (not included).

(G) Electrical and Valve Lockout Set— Station is made of yellow polycarbonate. It requires eight #10 mounting screws (not included). In addition to the items listed, this set comes with two plug lockouts. *Universal circuit-breaker lockouts* come in two sizes to take the place of tie-bar multipole lockouts and 277 VAC and 480/600 VAC no-hole lockouts. *Gate valve lockouts* fit hand wheel diameters 1″ to 3″, 2″ to 5″, 4″ to 6 1/2″, and 6″ to 10″. *Ball valve lockouts* fit pipe sizes 1/4″ to 4″.

Circuit Breaker Lockouts

Single Pole

Tie-Bar Multipole

No Hole

Prevent electrical circuits from being energized. Lockouts accept a single padlock with a max. shackle diameter of 9/32″ (padlock not included). All are compatible with Square D circuit breakers. Made of red nylon. Temperature range is 0° to 175° F.

Single-pole lockout works with most 120 VAC circuit breakers that have a hole through the breaker lever.

Tie-bar multipole lockout works with most major multipole breakers that have a tie bar, including GE, ITE, Sylvania, Challenger, Bryant, Westinghouse, and General Switch Co.

No-hole lockouts work on most single-pole circuit breakers that don't have a hole through the breaker lever. Lockout body is polypropylene.

DIN-Rail Circuit Breaker Lockouts

1&2

3

4

Style 1 Shown Mounted

Lock out circuit breakers that are designed to mount on DIN rails. All of these lockouts accept one padlock with a 9/32″ max. shackle dia. (padlock not included). Made of red glass-filled nylon. Not rated for temperature.

Styles 1-3 work with single and multipole breakers. ***Style 4*** works with multipole breakers that have a tie bar. A thumb wheel simplifies use.

For choose-a-color padlocks, see page 2933. For lockout/tagout danger tags, see pages 1895-1896.

Lockout Labels and Sleeves for Padlocks

Comply with lockout/tagout procedures. All labels and sleeves have space for employee's name and department.

(A) Adhesive-Back Labels— Apply directly to locks. Supplied with a clear plastic strip to cover and protect the label. Color is red.

(B) Labels with Heat-Shrink Sleeve— Use a heat gun to apply the clear, shrink-to-fit sleeve over the label for protection from dirt and moisture. Color is blue. 5028T52 allows you to add the employee's picture for identification.

(C) Heat-Shrink Sleeves— Use a heat gun to apply these solid-colored sleeves to locks. **To Order:** Please specify color: blue, green, red, or yellow.

Locking Bars for Tool Chests

Keep your tools safe from tampering. Bars have a spring hinge and fold over the edge of your tool chest drawers. Lock the drawers closed with a padlock (not included; see pages 2932-2944).

Bars are made of steel and are 1½″ wide. Bar and handle have a gray powder-coated finish. Hinges mount to the surface of your cabinet; they require at least ¼″ of surface area (mounting screws are included).

Note: When mounting the bar next to a drawer pull, you'll need a minimum of ½″ clearance from the drawer pull as well as ½″ of mounting surface on the cabinet edge.

(Padlock Not Included)

Bar Length	Max. Padlock Shackle Dia.		
12″	5/16″	12485A81	$38.93
22½″	5/16″	12485A82	41.70
34½″	5/16″	12485A83	46.08

Locking Bars for File Cabinets

Style D

(Padlock Not Included)

D E F G

Surface mount a locking bar on your file cabinet to secure information. Bars slide over a notched pin at the bottom, fit into a notched or clevis pin at the top, and lock at the top. Made of black, heavy channel steel. Bars are ⅛″ thick and can be cut to the length you need. Furnished with ⅜″ clevis pins, washers, notch pins, and nuts for mounting. Instructions are included.

Locking Bars

Padlocks are not included; see pages 2932-2944.

(D) Standard Padlockable Bars— Mount anywhere on the front of the cabinet. Bars are 1½″ wide and removable for easy access.

(E) Swing-Away Hinged Padlockable Bars— Bar has hinges for installation on the edge of the file cabinet at either corner (min. ½″ width required for mounting) and swings out of the way so you can open the drawers. Bar is 1½″ wide; hinges are 8″ Lg.×½″ Wd.

About Padlocks

You'll find our basic padlocks on pages 2932 and 2933. These locks come with two keys (unless noted) and have random key numbers. If you want to add padlocks or keys to an existing system, purchase a padlock with more than two keys, or create systems of locks (keyed alike or master keyed), see pages 2934-2942. For combination padlocks, see page 2943.

Locks with a higher number of pins or discs are harder to pick. A higher number of pins or discs also makes duplicate key numbers less likely within a random group of locks.

Strength and corrosion resistance are important factors to consider in selecting a padlock. See the chart at right for the relative strength and corrosion resistance of padlock materials.

Strength		Corrosion Resistance
Solid Steel	Greatest	Brass
Laminated Steel, Plastic-Coated Laminated Steel	↑	Stainless Steel
		Plastic-Coated Laminated Steel
		Plastic
Stainless Steel		Aluminum
Aluminum		Zinc
Brass, Zinc		Solid Steel
Plastic		Laminated Steel

Padlocks

Abuse-Resistant Steel-Body Padlocks and Zinc-Body Padlocks

A&C

B

D&E

F

G

H

J

K

- All include two keys.

A steel body and shackle give Styles A-J the strength to resist abuse. Zinc-body locks are not as strong, but they have better corrosion resistance. All of these padlocks have random key numbers.

A&B** Master Lock Warded Laminated Steel*—Have a basic warded locking mechanism (a simple locking mechanism without pins or discs) and a gray bumper. Shackle is steel. ***(B) have an adjustable vertical shackle clearance.

C-E** Master Lock Laminated Steel*—Have gray bumpers, unless noted. ***(C) have a steel shackle and a four-pin tumbler. ***(D)*** have a hardened steel shackle and a four-pin tumbler. ***(E)*** have a hardened steel shackle and a five-pin tumbler.

***F** Master Lock Wide-Body Laminated Steel*—Has a hardened steel shackle and a five-pin tumbler.

G&H** Master Lock Solid Steel*—Each shackle leg has a ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Locks have a hardened steel shackle and a five-pin tumbler. ***(G) has a standard shackle. ***(H)*** has a concealed shackle.

***J** American Lock Solid Steel*—Each shackle leg has a ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Locks have a hardened steel shackle and a five-pin tumbler.

***K** Zinc*—Has a hardened steel shackle and a six-disc tumbler. Case is dark tan.

■ Has a blue bumper. ★ Has a removable brass identification tag.

Corrosion- and Abuse-Resistant Padlocks

L&M

- All include two keys.

Made to be strong and corrosion resistant, these padlocks have random key numbers. All have pins in the tumbler.

***L&M** Abus Lock Concealed Shackle*—Have a stainless steel body with laser-welded seams. 1831A31 and 1831A11 have a stainless steel shackle. 1831A24 has a hardened steel shackle.

N&P** Master Lock Pro Series*—Have a laminated-steel body with black thermoplastic cover. Shackle is hardened steel. Each shackle leg has a stainless steel ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. ***(N) have a standard shackle. ***(P)*** have a concealed shackle.

Choose-a-Color Padlocks

E

F

G

H

J

● All include two keys, unless noted.

Commonly used in lockout applications, these padlocks come in different colors for easy identification. All have random key numbers. Locks have pins in the tumbler.

E ***Master Lock Plastic Body—*** Entire body is colored. Shackle is hardened steel. Locks include a "Danger" label (as pictured) and a write-on label marked "Property of." **To Order:** Please specify body color: black, blue, green, orange, purple, red, teal, or yellow.

F ***Master Lock Plastic Body with Plastic Shackle—*** All external parts are plastic, making this lock nonsparking and nonmagnetic. Entire body is colored. Lock includes a "Danger" label (as pictured) and a write-on label marked "Property of." **To Order:** Please specify body color: black, blue, green, orange, purple, red, teal, or yellow.

G ***American Lock Aluminum Body—*** Entire body is colored. Shackle is hardened steel. **To Order:** Please specify body color: black, blue, brown, gold, green, orange, purple, or red.

H ***Master Lock Laminated-Steel Body—*** Locks have a colored bumper. Shackle is hardened steel. **To Order:** Please specify bumper color: black, blue, green, red, white, or yellow.

J ***Aluminum Body with High-Security Key—*** Locks have a specially shaped key that cannot be duplicated and cannot be removed when the lock is open. Entire body is colored. Shackle is stainless steel. **To Order:** Please specify body color: beige, black, blue, bronze, gold, or red.

♦ Includes one key.

About Padlock Keying Options

Multiple Padlocks that Open with the Same Key (pages 2934-2938)—Also called keyed alike. Choose these locks if you need several locks that open with the same key. You can also find locks and keys to match a specific key number.

Master-Keyed Padlocks and Sets (pages 2940-2942)—Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key.

Abuse-Resistant Steel-Body Padlocks and Zinc-Body Padlocks (Multiple Locks that Open with the Same Key)

- All include two keys.

A steel body and shackle give Styles A-J the strength to resist abuse. Zinc-body locks are not as strong, but have better corrosion resistance. All of these padlocks have a specific key number. If the lock or key with the key number you want isn't listed, order in the "Other Key Nos." row and specify your desired key number.

A&B ***Master Lock Warded Laminated Steel***—Have a basic warded locking mechanism (a simple locking mechanism without pins or discs) and a gray bumper. Shackle is steel. ***(B)*** have an adjustable vertical shackle clearance. *Note:* Additional keys are not available because locks are warded.

C-E ***Master Lock Laminated Steel***—Have gray bumpers, unless noted. ***(C)*** have a steel shackle and a four-pin tumbler. ***(D)*** have a hardened steel shackle and a four-pin tumbler. ***(E)*** have a hardened steel shackle and a five-pin tumbler.

F ***Master Lock Wide-Body Laminated Steel***—Has a hardened steel shackle and a five-pin tumbler.

G&H ***Master Lock Solid Steel***—Each shackle leg has a ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Shackle is hardened steel. Have a five-pin tumbler. ***(G)*** has a standard shackle. ***(H)*** has a concealed shackle.

J ***American Lock Solid Steel***—Each shackle leg has a ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Locks have a hardened steel shackle and a five-pin tumbler.

K ***Zinc***—Have a hardened steel shackle and a six-disc tumbler. Case is dark tan.

Keyable Abuse-Resistant Steel-Body Padlocks

Customize these Master Lock padlocks to match your existing keys for Master Lock padlock Series Nos. 1, 3, or 5. Locks have a laminated-steel body and a five-pin tumbler. Shackle is hardened steel. To set the lock's key pattern, use the keying tool (sold separately), your key, and a hammer. *Note:* Locks cannot be master keyed.

Keying Tool

For information about padlocks, see page 2932. For information about keying options, see page 2934.

About Padlocks that Open with the Same Key (Keyed Alike)

Choose these keyed-alike locks if you need several locks that open with the same key. You can also find locks and keys to match a specific key number. For example, use keyed-alike locks if you have multiple tool boxes and want them to open with the same key.

Corrosion- and Abuse-Resistant Padlocks (Multiple Locks that Open with the Same Key)

A

B&C

D

E

F

- All include two keys.

A step above ordinary padlocks, these are made for strength and corrosion resistance. All have a specific key number. The shackles are concealed, except Style D locks have a standard shackle.

If the lock or key with the key number you want isn't listed, order in the "Other Key Nos." row and specify your desired key number.

A ***Master Lock Titanium Series—*** Have a stainless steel body, a hardened steel shackle, a black bumper, and a four-pin tumbler. The locks also have a front access keyway with a sliding cover to protect it from the elements. Key cannot be removed when the lock is open.

B&C ***Abus Lock—*** Have a stainless steel body with laser-welded seams. The key cannot be removed when the lock is open. ***(B)*** have a stainless steel shackle and a four-pin tumbler. ***(C)*** has a hardened steel shackle and a five-pin tumbler.

D&E ***Master Lock Pro Series—*** Have a laminated-steel body with black thermoplastic cover. Shackle is hardened steel. Each shackle leg has a stainless steel ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. All locks have a five-pin tumbler.

F ***100% Stainless Steel with High-Security Key—*** Has a stainless steel body and shackle and a seven-disc tumbler. The specially shaped key is difficult to duplicate and cannot be removed when the lock is open.

Breakable-Shackle Padlocks (Multiple Locks that Open with the Same Key)

G

H

- All include two keys.

In an emergency, use a hammer to quickly break the shackle on these locks. They are often used for sprinkler shutoff valves and fire hose housings. Locks have a specific key number, a zinc shackle, and a basic warded locking mechanism (a simple locking mechanism without pins or discs).

(G) has a stamped steel body. ***(H)*** are Master Lock laminated-steel body padlocks with a gray bumper.

	SHACKLE			Body

For information about padlocks, see page 2932. For information about keying options, see page 2934.

Corrosion-Resistant Brass-Body Padlocks (Multiple Locks that Open with the Same Key)

- All include two keys.

A brass body gives these padlocks the ability to withstand corrosion. All have a specific key number. If the lock or key with the key number you want isn't listed, order in the "Other Key Nos." row and specify your desired key number.

A ***Master Lock Laminated Brass—*** Have a blue bumper and a four-pin tumbler. Series 8 have a steel shackle. Series 2, 4, and 6 have a hardened steel shackle.

B-D ***Solid Brass—*** All have a five-pin tumbler, unless noted. ***(B)*** have a brass shackle. ***(C)*** have a stainless steel shackle. ***(D)*** have a hardened steel shackle.

E&F ***Solid Brass with High-Security Key—*** Have a half-moon shaped key that is difficult to duplicate and cannot be removed when the lock is open. Each shackle leg has a stainless steel ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Locks have an 11-disc tumbler. ***(E)*** has a stainless steel shackle. ***(F)*** has a hardened steel shackle.

▲ Has a four-pin tumbler. ★ Has a removable brass identification tag.

For information about padlocks, see page 2932. For information about keying options, see page 2934.

About Padlocks that Open with the Same Key (Keyed Alike)

Choose these keyed-alike locks if you need several locks that open with the same key. You can also find locks and keys to match a specific key number. For example, use keyed-alike locks if you have multiple tool boxes and want them to open with the same key.

Choose-a-Color Padlocks (Multiple Locks that Open with the Same Key)

- All include two keys, unless noted.

Identify these keyed-alike padlocks by color. All have a specific key number. Styles A and B are perfect for lockout applications. If the lock keyed to the number you want isn't listed, order in the "Other Key Nos." row and specify your desired key number and lock color.

A Master Lock Plastic Body— Entire body is colored. Locks have a hardened steel shackle and a six-pin tumbler. Include a "Danger" label (as pictured) and a write-on label marked "Property of."

B Master Lock Plastic Body with Plastic Shackle— All external parts are plastic, making these locks nonsparking and nonmagnetic. Entire body is colored. Locks have a six-pin tumbler and include a "Danger" label (as pictured) and a write-on label marked "Property of."

C American Lock Aluminum Body— Entire body is colored. Locks have a hardened steel shackle and a five-pin tumbler. **Also Available:** Additional keys. Please ask for 12095A1 and specify key number.

D Master Lock Laminated-Steel Body— Have a colored bumper, a hardened steel shackle, and a four-pin tumbler. **Also Available:** Additional keys. Please ask for 11775A2 and specify key number.

♦ Includes one key.

For information about padlocks, see page 2932.

Padlocks to Match Your Door Key

Key these five-pin locks to match your Kwikset or Schlage entry door locks so you can use the same key for both. Use indoors and out.

Shackle is hardened steel. Each shackle leg has a stainless steel ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Furnished with two keys already keyed to the padlock, two blank keys for rekeying the padlock, and instructions.

SHACKLE Dia.	Clearance Vert.	Clearance Horiz.	Kwikset Each	Schlage Each
Brass—*Body is 2″ Ht. × 1¾″ Wd. × ¾″ Thick.*				
5/16″	1″	15/16″	1522A11 $27.16	1522A12 $27.16
Chrome-Plated Brass—*Body is 2″ Ht. × 2″ Wd. × 13/16″ Thick.*				
3/8″	1″	15/16″	1522A13 30.63	1522A14 30.63

Adjustable-Length Cable Locks

- Locks include two keys.

A cinching mechanism in the lock allows you to tighten and loosen the cable around equipment of almost any shape.

Locks are made of weather-resistant aluminum alloy with a black and yellow ABS plastic bumper. They have a four-wafer cylinder. Size is 2¾″ Ht. × 4″ Wd. × 1 7/16″ Thick. Cables are 6-ft. long and are made of ⅜″ dia. black vinyl-coated braided steel.

	Each
Each Lock Opens with a Random Key No.	1033A31 $26.67
Each Lock Opens with Key No. 3221	1033A32 26.67

Cable Lock Security System

Prevent the theft of computers and secure equipment of almost any shape. System has locks at both ends of the cable to secure two pieces of equipment. Each lock fits into the standard built-in female security slot in PCs, laptops, and notebooks and has a random key number. Includes multistrand steel cable with a clear PVC coating and two high-security keys that are difficult to duplicate.

To attach to equipment without a built-in security slot, use an optional anchor (sold separately). ***Optional anchor*** is 1½″ Lg. × ⅞″ Wd. × ¾″ Proj. and comes with adhesive.

Cable Lg.	O'all Cable Dia.	Each
6 ft.	5/16″	1349A15 $70.00
Optional Anchor		1349A5 13.00

Vinyl-Coated Steel Cables

Coiled

Cables are steel with a clear vinyl coating. Aluminum sleeves secure the looped ends. Use with any style padlock. ***Coiled cables*** return to a compact, coiled position after use, making storage easy. ***Straight braided cables*** are more flexible than straight cables.

Cable Lg.	O'all Cable Dia.	Each
Coiled Cables		
6 ft.	1/4″	1585A56 $10.33
6 ft.	5/16″	1585A57 8.63
Straight Cables		
6 ft.	3/8″	1585A58 11.99
15 ft.	3/8″	1585A14 27.29
Straight Braided Cables		
7 ft.	3/8″	1585A61 11.81
15 ft.	3/8″	1585A13 19.92

Removable-Shackle Padlocks

- Include two keys.

The entire shackle separates from the body, making it easy to secure and remove these seven-pin locks. They're pry- and pick-resistant. Body and shackle are made of hardened steel with a vinyl cover to provide weather resistance. Lock with 11″ vertical shackle clearance is useful for securing gates and bulky equipment.

SHACKLE Clearance Vert.	Clearance Horiz.	Dia.	Body Dia.	Body Wd.	Each
1 7/8″	1 15/16″	9/16″	1″	3 11/16″	1026A11 $23.95
11″	5 1/8″	1/2″	1 1/8″	8 1/4″	1026A13 34.39

Master Lock Cable Locks

- Include two keys.

Great for anchoring tools and equipment, these locks have a four-wafer cylinder and open with a random key number. Locks are made of aluminum. Cables are made of strong, flexible steel and have a black vinyl coating to prevent scratching.

Cable Lg.	O'all Cable Dia.	Each
6 ft.	3/8″	8030A16 $13.91
6 ft.	5/8″	8030A18 33.50

Steel Security Chain with Nylon Sleeve

Made of hardened steel, chain is zinc plated for corrosion resistance and has a nylon sleeve to protect against abrasion. Chain is not load rated.

Fits Max. Padlock Shackle Dia.	Dia.	2-ft. Length	Each	10-ft. Length	Each
5/16″	0.24″	1585A73	$13.15	1585A81	$65.09

5/8″	0.39″	1585A77	29.18	1585A83	144.44

Padlock Chains, Collars, and Tags

Chains are made of zinc-plated cold-rolled stainless steel and fit the collars sold separately below. All have a 1 9/16″ Lg. × ¾″ Wd. mounting tab with two 3/16″ dia. holes (screws not included).

Sash chain has flat links that have been stamped into shape; *machine* chain is made of welded links, which are stronger.

	Chain Thick.	Chain Lg.	Pkg. Qty.	Per Pkg.
Sash	0.032″	9″	6	13205A11 $10.25
Machine	0.114″	9″	6	13205A12 15.20

Shackle collars allow you to attach a padlock to the 13205A series chain sold separately above. Made of zinc- and chrome-plated cold-rolled steel. Include rivets for attaching collar to shackle.

Fits Max. Shackle Dia.	Pkg. Qty.	Per Pkg.
1/4″	12	13205A14 $11.21

3/8″	12	13205A17 11.21
7/16″	12	13205A18 11.21

Chain assemblies include chain, an interlocking loop to fit your padlock shackle, and a mounting bracket to anchor the chain. Made of zinc-plated steel. Mounting hardware is included.

Fits Padlock Shackle Dia.	Chain Thick.	Chain Lg.	Each
Up to 9/32″	0.188″	8″	1084A51 $7.50
9/32″ to 5/16″	0.188″	8″	1084A57 8.56

Tags are brass and have an overlapping ring. They are 1¾″ Lg. × ½″ Wd. Package quantity is 12.

11695A44 ..... **Per Pkg.** $16.88

For information about padlocks, see page 2932. For information about keying options, see page 2934.

About Master Keyed Padlocks

Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key. An example is locker assignments. Each person uses a padlock that has a random key number—each person can open only their own locker. In a master keyed system, one person has a master key that opens all of the lockers.

We also offer master keyed padlock sets. Master keyed sets have padlocks (or groups of padlocks) with different key numbers. Each person can open their own lock (or the locks in their group). One person has a master key that opens every lock in the set. For master keyed padlock sets, see pages 2940 and 2941.

Abuse-Resistant Steel-Body Padlocks and Zinc-Body Padlocks (Master Keyed)

- All include two keys. Master keys for individual padlocks are sold separately.

A steel body and shackle give Styles A-D the strength to resist abuse. Zinc-body locks are not as strong, but they have better corrosion resistance. All of these locks have random key numbers; they also open with a master key (sold separately for individual padlocks).

A&B ***Master Lock Laminated Steel—*** Have a four-pin tumbler. ***(A)*** have a blue bumper and a steel shackle. ***(B)*** have gray bumpers and a hardened steel shackle.

C ***Master Lock Wide-Body Laminated Steel—*** Has a hardened steel shackle and a five-pin tumbler.

D ***American Lock Solid Steel—*** Each shackle leg has a ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Lock has a hardened steel shackle and a five-pin tumbler.

E ***Zinc—*** Have a hardened steel shackle and a six-disc tumbler. Case is dark tan.

Individual Padlocks— Locks have random key numbers and also open with a master key (sold separately).

Master Keyed Sets and Additional Padlocks, Keys, and Master Keys

Master keyed sets come with nine padlocks that are divided into groups of three. Each group of three padlocks opens with a specific key number. Each padlock in the set comes with two keys. Each set comes with a master key that opens all the padlocks. If you want to expand your set, additional padlocks, keys, and master keys are sold separately.

Choose-a-Color Padlock Set (Master Keyed)

- Each padlock includes two keys. Master key included in set.

It's easy to identify an individual's padlock in this set—the body of each lock is a different color. Padlocks are American Lock series 1105 with an aluminum body and hardened steel shackle. All have a five-pin tumbler. Shackle diameter is 1/4″. Vertical shackle clearance is 1″. Horizontal shackle clearance is 3/4″. Body is 1 13/16″ Ht. × 1 1/2″ Wd. × 3/4″ Thick. Each padlock has a specific key number and comes with two keys. The master key opens all the locks.

If you want to expand your set, additional padlocks, keys, and a master key are sold separately.

Master Keyed Padlock Set

You'll get eight padlocks in different colors (and key numbers): one each in black (0030), blue (0020), brown (0040), green (0015), orange (0025), purple (0045), red (0005), and yellow (0010). The included master key opens all the locks.

1455A19 ..... **Per Set** $124.81

Additional Master Key—Master key number is M58501.

The master key opens all the padlocks in the set.

1455A9 ..... **Each** $2.27

Additional Padlocks and Keys

Color (Key No.)	Additional Padlocks	Each	Additional Keys	Each
Black (0030)	1455A6	$15.92	1455A16	$2.27

For information about padlocks, see page 2932. For information about keying options, see page 2934.

About Master Keyed Padlocks

Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key. An example is locker assignments. Each person uses a padlock that has a random key number—each person can open only their own locker. In a master keyed system, one person has a master key that opens all of the lockers.

We also offer master keyed padlock sets. Master keyed sets have padlocks (or groups of padlocks) with different key numbers. Each person can open their own lock (or the locks in their group). One person has a master key that opens every lock in the set. For master keyed padlock sets, see pages 2940 and 2941.

Choose-a-Color Padlocks (Master Keyed)

- All include two keys, unless noted. Master keys sold separately.

Identify these master keyed locks by color. All locks have random key numbers; they also open with a master key (sold separately). Shackle is hardened steel.

If the lock keyed to the master key number you want isn't listed, order in the "Other Padlocks" row and specify your desired master key number and lock color.

A ***Master Lock Thermoplastic Body***—Entire body is colored. Locks include a "Danger" label (as pictured) and a write-on label marked "Property of." All have a six-pin tumbler.

B ***American Lock Aluminum Body***—Entire body is colored. Locks have a five-pin tumbler.

C ***Master Lock Laminated-Steel Body***—Have a colored bumper and a four-pin tumbler.

♦ Includes one key.

For information about padlocks, see page 2932.

Master Lock Combination Padlocks

Perfect for personal-storage lockers, these locks have a three-digit combination and a stainless steel outer wall that protects the inner case. Shackle is hardened steel. Dial is black with white numbers and has a large knurled knob.

Standard Security—Have a lever locking one shackle leg. Inner case is steel. Body is 1⅞″ Dia. × 1″ Thick.

High Security—Each shackle leg has a hardened stainless steel ball-bearing locking mechanism, making the lock more difficult to shim and pull apart. Dial rim is recessed and reinforced to prevent tampering. Inner case is zinc with a steel backplate. Body is 2³⁄₁₆″ Dia. × 1½″ Thick.

Key-controlled locks let you open the shackle with a control key (sold separately) instead of the combination. All have a four-pin tumbler. *Factory-registered* locks give you an exclusive keying system that is unique to your locks. **To Order:** If matching factory-registered locks to an existing group, please specify key number.

Standard Security — *Key Controlled High Security*

TSA Search Indicator

Set your own combination and change it at any time. Three-digit locks have 1,000 possible combinations; four-digit locks have 10,000 possible combinations; and five-letter lock has 50,000 possible combinations. ***Bottom-digit*** and ***front-digit*** locks have a hardened steel shackle. ***Side-digit*** locks have a steel shackle.

Super Sesamee—Locks have a hardened-steel jacket for extra toughness. Interior components are brass for corrosion resistance.

Laminated—Locks have a black bumper.

Key Controlled—Locks can open with a control key (sold separately).

Covered Digit—Cover snaps shut to protect dials from the weather. Locks have a black bumper.

Letter Combination—Use letters instead of numbers to unlock the shackle. Dials are plastic.

TSA Search Indicator—Lock secures your equipment cases during travel, but allows Transportation Security Administration (TSA) personnel to open your luggage. Indicator lets you know if the lock was opened.

Shackleless Through-Bolt Padlocks and Security Hasp

Padlock with Optional Security Hasp

Back View of Lock

- Padlocks include two keys. Master keys sold separately for 1749A13.

Also called hockey puck locks, these eliminate the most vulnerable part of any padlock—the shackle. Use with optional security hasp (sold separately) or any hasp eye with a min. 7/16″ dia. hole. The locking bolt passes through the hasp eye to protect against bolt cutters, hacksaws, and pry bars. If the lock keyed to the number you want isn't listed, order under "Padlocks for Other Key Nos." and specify your desired key number. ***Locks*** are solid chrome-plated steel with a six-pin tumbler. ***Optional security hasp*** is 1/4″ thick chrome-plated steel. Requires six 3/8″ dia. carriage bolts (not included).

Padlock Hasps

Styles 1&2— Padlock eye cannot be adjusted after installation.

Style 3— Padlock eye allows slight horizontal and vertical movement to compensate for misalignment with the hasp arm.

Style 4— Hasps can be fastened by turning the padlock eye; the hasp will stay closed without a padlock.

Style 1—Hasps with Fixed Padlock Eye

Multi-Hinged Padlock Hasps

Hinged leaves on these hasps allow them to mount around curves, angles, and corners. All have a fixed padlock eye that cannot be adjusted after installation. Furnished with mounting screws.

Hasps with shackle protector prevent the shackle from being cut or pried open. They are designed for use with concealed-shackle and shackleless padlocks.

Locking Hasps

A lock is built into these hasps, eliminating the need for a separate padlock. All come with two keys except Style 1, which has a combination lock. Furnished with mounting screws.

Style 1—The lock is on the plate; just dial the three-digit combination. Hasp is zinc-plated steel.

Style 2—The plate has a five-wafer key lock. 16885A22 hasp is zinc-plated steel. 16885A25 hasp is chrome-plated steel.

Style 3—Has a four-wafer key lock on the hasp arm. Hasp is polished Type 304 stainless steel.

Style 4—A 1 3/4″ wide padlock with a four-pin tumbler is permanently attached to a 3/8″ dia. slide bolt. Hasp is chrome-plated steel. Master key is sold separately.

About Cam Latches and Locks

Cam latches and locks have an attached metal arm that rotates to lock cabinet doors and file drawers. The cam mechanism is either straight or offset. Offset cams are often reversible, which means they can be mounted to reach two different latching distances.

Latching distance is the distance between the outside mounting surface and the inside face of the cam. We provide the maximum latching distance possible after installation of the latch or lock. Some latches and locks have a latching distance range because their cams are adjustable. Latches and locks with fixed values for latching distance have cams that are not adjustable.

Cam Locks

Locks have a zinc cylinder and reversible cams. All come with two keys. *Note:* Master keys for master-keyed locks are sold separately.

Locks for 1/2″ dia. mounting hole are recommended for mounting in metal and fiberglass. Head is 19/32″ dia. Locks come with a 1 1/8″ Lg. × 3/8″ Wd. straight cam, a 1 1/8″ Lg. × 3/8″ Wd. offset cam (11/32″ offset), a mounting nut, and a screw with washer for mounting in metal and fiberglass.

Locks for 3/4″ dia. mounting hole are recommended for mounting in metal and wood. Head is 7/8″ dia. Locks come with a 1 1/2″ Lg. × 5/8″ Wd. straight cam, a 1 1/8″ Lg. × 5/8″ Wd. offset cam (11/32″ offset), a trim washer, a mounting nut, and a lock washer for mounting in wood. Replacement washers for mounting in metal and wood are sold separately.

Straight Cam (1 1/2″ Lg. × 5/8″ Wd.)	1770A111	$1.11	Washer for Mounting in Metal	1770A113	$0.95
Offset Cam (1 1/8″ Lg. × 5/8″ Wd. × 11/32″ Offset)	1770A112	1.84	Washer for Mounting in Wood	1770A114	.41

For information about cam latches and locks, see page 2946.

Circular-Keyway Cam Locks

Compared to conventional keys, circular keys provide more security because they are difficult to duplicate. Locks also have a tubular pin tumbler. Turn key 90° or 180° to the right or left to unlock. Cylinder is zinc with a polished nickel finish. Cams are steel. Head dia. is 7/8″.

Include two keys, a 1 9/16″ Lg.×5/8″ Wd. straight cam, a 1 7/16″ Lg.×5/8″ Wd. reversible offset cam (1/4″ offset), a cylinder nut with lock washer, two cam stops, and a mounting nut and washer. Recommended for mounting in metal, wood, plastic, and fiberglass. *Note:* Master key for master-keyed locks is sold separately.

Also Available: Replacement keys for locks that open with the same key. Please ask for 1682A41 and specify key number.

High-Security Cam Locks

The half-moon shape of the keys is difficult to duplicate and makes these locks highly pick resistant. Turn key 180° to the right to unlock. Key is removable only in locked position. Cylinder is chrome-plated brass. Cams are nickel-plated steel. Head dia. is 7/8″.

Include two keys, a 1 1/8″ Lg.×5/8″ Wd. straight cam, a 1 1/2″ Lg.×5/8″ Wd. reversible offset cam (3/8″ offset), a nut lock washer, and a mounting nut. Recommended for mounting in metal, wood, and plastic. *Note:* Master keys for master-keyed locks are sold separately.

Plastic Cam Locks

Made of ABS plastic, the lock cylinder resists corrosion. Turn key 90° to the right to unlock. Cams are nickel-plated steel. Head diameter is 7/8″.

Furnished with two keys, a 1 1/4″ Lg.×5/8″ Wd. straight cam, a 1 1/4″ Lg.×5/8″ Wd. reversible offset cam (1/4″ offset), a mounting nut, and a cam screw. Recommended for mounting in metal, plastic, and fiberglass. Temperature range is 14° to 185° F.

Miniature Circular-Keyway Cam Locks

With a head diameter of 19/32″, these locks are well-suited for small spaces. Their keys have a circular shape that is difficult to duplicate. Cams are reversible; their position determines the direction you turn the key. To engage lock, turn key 90°. Key is removable only in the locked position. Locks are brass with a polished chrome finish.

Include two keys, a 1 1/8″ Lg.×7/16″ Wd. reversible straight cam, a 1 1/8″ Lg.×7/16″ Wd. reversible offset cam (1/8″ offset), a cylinder nut, and a mounting nut. Recommended for mounting in metal and fiberglass.

Weather-Resistant Cam Locks

A Type 304 stainless steel spring-action shutter blocks liquid and dry contaminants from entering the cylinder where they can cause internal damage. Key will engage the lock with a 180° turn to either the right or left. Cylinder is zinc. Cams are nickel-plated steel. Head diameter is 7/8″.

Locks come with two keys, a 2 3/4″ Lg.×5/8″ Wd. straight cam (can be cut to size), two 1 5/16″ Lg.×5/8″ Wd. offset reversible cams (7/8″ offset and 1/4″ offset), a cylinder nut, mounting screw with washer, and trim washer. Recommended for mounting in metal and fiberglass.

Universal Mailbox Cam Locks

Meet U.S. postal guidelines for mailbox locks. Turn key 90° to the left to unlock. Key is removable only in the locked position. Cylinder is nickel-plated zinc. Cams are zinc-coated steel. Head diameter is 7/8″.

Includes two keys, nine reversible cams (lengths range from 3/4″ to 1 1/2″, offsets from 1/16″ to 7/16″), a quick-mount clip, cam nut, and lock washer. Recommended for metal, plastic, and fiberglass.

Max. Door/ Drawer Thick.	Max. Latching Distance	Mount. Hole Dia.

Recessed-Ring Cam Latches and Locks

Key Locking

Ring is recessed to stay out of the way when not in use; lift and twist 180° to the right to open. Latch and lock are chrome-plated brass. Ring and cams are 300 series stainless steel for corrosion resistance. O'all size is 2 1/8″ Lg.×1 7/8″ Wd.

Include a 2″ Lg.×5/8″ Wd. straight cam, a 2″ Lg.×5/8″ Wd. reversible offset cam (3/8″ offset), a mounting nut, and a lock washer. Recommended for mounting in metal, wood, plastic, and fiberglass.

Key-locking latch comes with two keys. Turn key 180° to the right or left to unlock.

For information about cam latches and locks, see page 2946.

Resettable Combination Cam Locks

Dial in your three-number code and turn the knob 90° right or left to unlock. There are 1,000 different combinations possible—reset the lock with a paper clip. Made of zinc. Head diameter is 1½″. Knob projection is ⅝″.

Include a 1½″ Lg.×½″ Wd. straight cam, a ¾″ Lg.×½″ Wd. straight cam, and a 1½″ Lg.×½″ Wd. reversible offset cam (¼″ offset). Recommended for mounting in metal, wood, and fiberglass; secure from the back with the included cylinder nut.

Max. Door/ Drawer Thick.	Max. Latching Distance	Mount. Hole Dia.	Chrome		Black

Wing-Handle Cam Latches

An easy-to-grasp wing handle simplifies use. Turn 90° right or left to unlatch; you select the turn direction when you mount the cam. Made of nickel-plated zinc. Wing handle is 1½″ long.

Furnished with a 1¼″ Lg.×⅝″ Wd. straight cam, a 1⅛″ Lg.×⅝″ Wd. reversible offset cam (¼″ offset), a hex nut, an assembly screw, and a lock washer. Recommended for mounting in metal, wood, and plastic.

Adjustable Cam Latches

Turn the collar under the knob and set your latching distance exactly where you need it. To open and close, turn the knob 90° to the right or left. Control knob is black nylon and is not temperature rated. Latch and cam are zinc-plated steel.

Furnished with a reversible offset cam, a mounting nut, and two jam nuts. Recommended for mounting in metal, wood, plastic, and fiberglass.

Slotted Cam Latches

Open the latch with a screwdriver instead of a key. The latch holds doors and drawers closed, but still allows easy access. You select both the direction and the degree of turn (90° or 180°). Latch is zinc; cams are steel.

Includes a 1½″ Lg.×⅝″ Wd. straight cam, a 1½″ Lg.×⅝″ Wd. reversible offset cam (3/16″ offset), a lock washer, two stop washers, and a mounting nut. Recommended for mounting in metal and wood.

Max. Door/ Drawer Thick.	Max. Latching Distance	Mount. Hole Dia.	Head Dia.		
¼″	13/16″	¾″	⅞″	10335A75	$5.48

Miniature Slotted Cam Latches

To unlatch, use a screwdriver to turn the slotted head 90° right or left. The head is small, so it's good for limited-space areas. Latch doesn't require any tools for installation—insert the shaft through a drilled hole and use the push-on retainer to tension-mount the latch against the inside surface. Made of steel.

Furnished with a 1 5/16″ Lg.×½″ Wd. straight cam. Recommended for mounting in metal, wood, plastic, and fiberglass.

Max. Door/ Drawer Thick.	Latching Distance Range	Mount. Hole Dia.	Head Dia.		
¾″	¼″-1″	¼″	9/16″	1340A31	$5.12

L- and T-Handle Cam Latches and Locks

Nonlocking L-Handle Latch with Exposed Screws

Key Locking T-Handle Latch with Concealed Screws

Use alone or with a three-point locking system commonly seen on filing cabinet doors. Mount cam to latch at a single point or, for additional strength, position it to drive a bar or rod into as many as two additional latch points. Handles are made of chrome-plated zinc alloy. They have a 2 5/16″ Lg.× 1 3/16″ Wd. base and fit into a ⅞″ dia. mounting hole.

Furnished with a 1¾″ Lg.×⅝″ Wd. three-point straight cam. Recommended for mounting in metal, wood, plastic, and fiberglass.

L-Handle Latches—All are 3 5/16″ Lg.×1″ Wd. and have a 1 11/16″ projection.

T-Handle Latches—All are 3 3/16″ Lg.×1″ Wd. and have a 1 13/16″ projection.

Concealed screw mount latches come with two M4 screws that screw in from the back of the handle. Require screw holes 1½″ apart (center-to-center). They have a 5/16″ Sq.×9/16″ Lg. spindle.

Exposed screw mount latches require two M4 screws (not included) that screw in from the front of the handle. Require screw holes 1¾″ apart (center-to-center). They have a 5/16″ Sq.×3 3/16″ Lg. spindle.

Key-locking latches come with two keys. *Note:* Master key for master-keyed locks is sold separately. **Also Available:** Replacement keys for locking latches. Please ask for 1210A77 and specify key number.

For information about cam latches and locks, see page 2946.

Padlockable L-Handles and Latches

Mount handles on heavy doors, such as those found on trucks and large cabinets; secure with a padlock (not included). An optional reversible latch is sold separately. Handles rotate 360° right and left. They mount to the front surface of a door and require #10 mounting screws (not included). Recommended for mounting in metal, wood, plastic, and fiberglass.

Zinc-Plated Steel L-Handle—Handle has a dull silver powder-coated finish; shaft is plain.

Type 304 Stainless Steel L-Handle—Handle and shaft have a dull finish.

Optional Reversible Latch—Depending on how you position this latch, it can unlatch when the handle (sold separately) is turned to the right or left. Made of zinc-plated steel. Latch is 3″ Lg.×1″ Wd. with an 11/32″ projection. Requires two #14 mounting screws (not included). Cam is 5/8″ Lg.×11/16″ Wd.

Water- and Dust-Resistant Cam Latches and Locks

Designed for indoor and outdoor use, all latches and locks are IP65 rated for protection against dust and water projected from a nozzle. Unlatch with a 90° turn to the right or left. Mount into an approximately 7/8″ dia. punched hole.

Include three nonreversible cams with a variety of offsets, except Styles B and D come with one nonreversible cam (5/16″ offset). Cams are 1 3/4″ Lg.×3/4″ Wd., except cam for Style F is 1 3/8″ Lg.×3/4″ Wd.

Key-locking latches include two keys, except 80625A48 comes with one key.

Style E has two hasp openings that accommodate padlocks with a 5/32″ and 3/8″ diameter shackle.

Style F has a temperature range of –4° to +194° F.

Styles G&J have a Type 304 stainless steel hasp with an opening that accommodates a padlock with a max. shackle dia. of 5/16″.

Two-Handle Bolt Latches

Operate these latches from either side of your door—there is a handle on both sides. Latches require a 3/4″ dia. hole through the door for installation. Made of zinc-plated steel. Accept a padlock with a max. shackle diameter of 3/8″. Reversible for right- and left-hand mounting. Furnished with mounting screws.

For information about cam latches and locks, see page 2946; for cabinet locks, see page 2952.

Replaceable-Core Cabinet Locks

Combine a lock body with a replaceable core so you can match the keying of your current system, or have the option of changing the core without replacing the entire lock. It's a great way to save time and expense. Locks require a 180° turn to open.

Lock Bodies

Lock bodies are made of zinc and have a 5/8″ dia. cylinder. Recommended for mounting in wood drawers, doors, and cabinets.

Deadbolt body is 1 1/4″ Ht.×1 3/4″ Wd.×1/2″ Dp. Cylinder is 3/4″ long. Bolt extension is 3/8″. Housing is nylon.

Cam body has a 5/8″ Ht.×1 11/16″ Wd.×1/8″ Thick. mounting plate. Cylinder is 3/4″ long. Furnished with a 1 1/4″ Lg.×5/8″ Wd. straight cam and a 13/16″ Lg.×5/8″ Wd. offset cam. Cams are zinc-plated steel.

	Max. Door/Drawer Thick.		
Deadbolt	3/4″	17825A21	$2.67
Cam	3/4″	17825A22	4.25

Lock Cores

Lock cores fit the deadbolt and cam lock bodies. To insert, snap the core into the lock body. Removal requires the *core removal tool* (sold separately). Cores are 5/8″ dia.

Furnished with two keys and a matching trim ring that adapts the lock for use with 3/4″ holes. *Note:* Master key for master-keyed lock is sold separately.

To Order: Please specify black, brass, or nickel finish.

Spring-Cam Latches

Knob

Slotted

T-Handle

Give the latches a quarter turn and their spring-wire cams slip under a receiving catch on a cabinet body and hold the surfaces together. A 90° turn to the left releases the tension and opens your door or drawer. Latches can be screwed, riveted, or welded on to the back of your mounting surface.

Recommended for mounting in metal, wood, plastic, and fiberglass. Mounting screws not included.

Lift-and-Turn Fixed-Compression Cam Latches and Locks

Lever Handle

Key-Locking Flush Handle

To latch, turn the handle 90° and push it down. Latches reach full compression as soon as the cam is engaged. To unlatch, lift the handle to release the compression, then turn 90°. The direction of turn depends on installation. All are through-hole mount. Latches are zinc; cams are zinc-plated steel.

Furnished with a reversible offset cam (except cam for 1619A13 and 1619A36 is not reversible) and mounting hardware. The offset cam provides variable latching ranges depending on cam position. Recommended for mounting in metal, wood, plastic, and fiberglass.

Key-locking latches come with two keys. They open with key number CH751.

For information about cam latches and locks, see page 2946.

Compression Cam Latches and Locks

Turn 90° to latch, then another 90° to draw the cam firmly against the door or drawer surface to hold it tightly closed.

Styles A, B, and ***D-F*** have a work load limit of 100 lbs. Handles and heads are zinc with a black finish. Latches come with a reversible offset cam; the offset cam provides variable latching ranges depending on the cam position. Recommended for mounting in metal, wood, plastic, and fiberglass.

Style C is not work load rated. Handle is zinc-aluminum alloy with a plain finish. Furnished with a straight cam. Recommended for mounting in metal.

(A) Hex Key Latch— Cam offset is 1/2″. To unlatch, use a 5/16″ hex key to turn cam left 90°. Hex key is not included; see page 2839. Comes with two mounting screws. Drill mounting holes 1 1/4″ apart (center-to-center).

(B) Slotted Latch— Cam offset is 1 1/16″. To unlatch, use a slotted screwdriver to turn cam left 90°. Furnished with a nut and lock washer.

(C) L-Handle Latch— Has a fan-shaped cam to spread compression force over a larger area than most. The 3″ Lg. × 1 1/4″ Wd. mounting plate accommodates the added force. To unlatch, turn handle left. Comes with mounting screws. Screw holes on mounting plate are 2 1/2″ and 3/4″ center-to-center.

(D) T-Handle Latch— Cam offset is 1/2″. To unlatch, turn handle left 180°. Comes with two mounting screws. Drill mounting holes 1 1/4″ apart (center-to-center).

(E) Circular-Keyway Lock— Cam offset is 1 1/16″. To unlatch, turn key left 90°. Comes with one key and two mounting screws. Drill mounting holes 1 1/4″ apart (center-to-center).

(F) T-Handle Lock— Cam offset is 1/2″. To unlatch, unlock and turn handle left. Comes with two keys and a nut and lock washer.

Adjustable Compression Cam Latches

Latches can be adjusted to compensate for misalignment. Use them for gasketed doors, access panels, and equipment covers. To latch, turn 90° to the right; continue turning to draw the cam firmly against the door or drawer surface to hold it tightly closed.

Furnished with a nonreversible offset cam, unless noted. Recommended for mounting in metal, wood, plastic, and fiberglass.

(G-K) Latches through-hole mount and secure in back of the door with a nut (included).

(L&M) Latches through-hole mount and require two screw holes to secure in back of the door (require #10 screws or 3/16″ rivets, not included; screw holes are 1 1/4″ center-to-center).

Slotted Style— Use a screwdriver to latch and unlatch.

Key Locking

About Cabinet Door and Drawer Locks

Cabinet door and drawer locks are usually used in wood doors and come with wood screws. Keys can be removed in both the locked and unlocked positions.

Cabinet Door and Drawer Locks

Diamond Body for Cabinet Door — *Diamond Body for Drawer* — *Rectangular Body for Cabinet Door* — *Rectangular Body for Drawer*

Locks come with two keys and mounting screws. *Note:* Master keys for master-keyed locks are sold separately.

Locks with Diamond Body— Body and cylinder are zinc. Bolt extension is 3/8″. Screw holes are 1 7/16″ center-to-center. Lock case is 2″ Ht.×1 3/8″ Wd. for door; 1 3/8″ Ht.×2″ Wd. for drawer.

Heavy Duty Locks with Rectangular Body— Compared to locks with a diamond body, these have more durable construction and provide greater security. Body is zinc and steel; cylinder is brass. Bolt extension is 3/4″. Screw holes are 15/16″ and 1 5/16″ center-to-center. Lock case is 1 5/8″ Ht.×1 1/4″ Wd. for door; 1 1/4″ Ht.×1 5/8″ Wd. for drawer.

Master Lock Resettable Combination Locker Locks

Change the combination in seconds. The back of each lock has a push-button combination changer that allows you to switch between five three-number combinations. Use a control key (sold separately) to override the combination if necessary.

Case is steel with a steel backing plate (front and back pieces disconnect to mount on either side of the door). Case is 2 7/8″ Ht.×1 7/8″ Wd. Locks fit doors 1/16″ to 1/8″ thick. The dial assembly mounts through an 11/16″ hole. Mounting bolts are concealed for added security; bolt holes are 2 3/16″ center-to-center. Back plate fastens with locking nuts (included).

Right Hand

Automatic-Lock Bolt—For lockers with vertical lift handles and automatic bar-and-rod releases. Bolt moves vertically and extends 5/16″.

Automatic-Lock Spring Bolt—For lockers without handles. Bolt moves horizontally and extends 1/4″.

Manual Deadbolt—For metal mesh lockers and lockers with automatic bar-and-rod releases. Bolt moves horizontally and extends 5/16″.

Control key overrides all combinations so you can open locks in an emergency.

To Order: For locks, please specify if order is for a new system or an existing system. If you are ordering for a new system, you must order a control key (sold separately). If you are matching an existing group of locks, please specify key number.

	Right Hand ♦		Left Hand ♦

Barrel Slide Bolts

Slide the bolt and drop the knob into the notch to secure your door. Reversible for right- and left-hand mounting. Include mounting screws, except Style 2.

Style 2— Screws not included. Require #6 screws, except 1376A21 requires #3 screws and 1376A23 and A24 require #5 screws.

Style 5— 1441A21 and A42 have a 1/4″ maximum padlock shackle diameter; they do not have a second strike. 1769A4 and A5 have a 3/8″ maximum padlock shackle diameter.

Easy-Grip Lift-and-Drop Slide Bolts

Handles are large to make gripping easy. Plus, the lift-and-drop design keeps them out of the way when not in use. Slide bolts are reversible for right- and left-hand mounting. Furnished with mounting screws, except Styles 6 and 7.

Style 6— (E) is 3 7/8″ and (F) is 2 1/2″. Requires 3/8″ dia. and 5/16″ dia. screws (not included).

Style 7— A spring keeps bolt extended for secure latching; bolt can be held in open (unlatched) position. Requires 1/4″ dia. screws (not included).

Style 8— Latches have a zinc mounting plate. 1754A24 has an additional flat strike; (E) is 1″ and (F) is 2 3/16″.

Style 9— 1241A3 and A4 have a max. padlock shackle dia. of 5/8″; the padlock eye requires four #10 screws (not included) for mounting.

Style 10— Max. padlock shackle dia. is 3/8″, (E) is 2″, and (F) is 2 1/4″.

Style 11— For 10635A45 the maximum padlock shackle diameter is 1/4″, (E) is 5/8″, and (F) is 1 1/4″. 10635A65 and A85 have a maximum padlock shackle diameter of 3/8″. For 10635A65 (E) is 3/4″; (F) is 1 5/8″. For 10635A85 (E) is 7/8″; (F) is 1 7/8″.

Concealed Screw Slide Bolts

Mounting screws are concealed to discourage tampering. Slide bolts are reversible for right- and left-hand mounting. Mount vertically or horizontally. Furnished with mounting screws.

(14) Padlockable Slide Bolt— Lock the slide bolt in any of four holes. Padlock must have a vertical shackle clearance that exceeds 1″. Maximum padlock shackle diameter is 7/16″.

(15) Key-Locking Slide Bolts— Slide bolts can be locked in the open or closed position. Come with two keys.

Swinging Bar Latches

Screw Style

Snap Style

Latches are reversible for right- and left-hand mounting. Furnished with mounting screws.

Plain Style—The strike creates a sleeve to hold the bar. A back catch holds the bar when it's not latched. ***Screw Style—***1915A16 and A17 have a finger screw to hold the bar in the strike; A14 does not have a finger screw. ***Snap Style—***Latch snaps shut when the bar is placed in the strike; push the button on the bottom of the strike to release the bar.

Heavy Duty Swinging Bar Latches

You'll see these latches on refrigerators and truck doors because they stand up to heavy use. Latches are reversible for right- and left-hand mounting. Mounting screws are not included.

Nonlocking Latch—Bar is zinc-plated steel.

Padlockable Latch with Inside Handle—Bar is zinc-plated iron. Handle is die cast zinc. Minimum door thickness is 2″. Maximum padlock shackle diameter is ⅜″. Latch has a through-door rod that's 9⁄16″ Dia. × 8¾″ Lg.; thread length is 7″.

Flush-Mount Lever Extension Bolts

Use the lever to extend or retract the bolt. Also known as flush bolts, they're commonly used on metal double doors to hold one door closed. Reversible for right- and left-hand mounting. Bolts are approximately 6¾″ long and consist of a 10¾″ long rod with a ½″ Dia. × 1½″ Lg. brass tip. Come with mounting screws and a template for installation.

Bolts are UL listed for labeled metal fire doors up to 8 feet high with a maximum three-hour fire rating.

Swinging Hook Latches

Style 5—A spring-action hook prevents accidental unlatching.

Style 6—Comes with mounting screws.

Style 7—A plastic bushing in the eye reduces vibration to prevent accidental unlatching. Mounting screws not included.

Style 8—Mounting screws not included.

Style 9—Two joints allow the hook to move up-and-down and side-to-side. Mounting screws not included.

Cam Latches and Latch Kits

Latches arrive ready for single-point latching. For more holding power, add a latch kit (sold separately) for two-point latching or add two latch kits for three-point latching (except 11595A41 is for single-point latching only). For multiple-point latching, use *Style A* on 7″ to 5′8″ high doors and *Styles B-E* on 20″ to 9′10″ high doors.

(A) Nonlocking Latch with Drop Handle— Cup is 3/8″ deep and mounts flush. Cup and handle are chrome-plated steel; shaft is zinc-plated steel. Reversible for 90° clockwise and counterclockwise unlatching. Includes a reversible offset cam, a mounting bracket, and screws. ***Latch kit*** has a rod and a rod guide. Guide requires #10 screws for mounting (not included).

(B&C) Nonlocking Latches with T-Handle— Latches through-hole mount; a jam nut is included. Made of zinc-plated steel and zinc. All latches are reversible for 90° clockwise and counterclockwise unlatching. Furnished with two mounting screws. 11595A41 has two handles (one inside and one outside). ***Latch kits*** have a rod and a rod guide. Guide requires M6 screws for mounting (not included).

(D&E) Latches with Folding T-Handle— Latches through-hole mount and require four 7/32″ dia. holes for the threaded male studs on the back. Handle is chrome-plated die cast zinc; cup and mounting bracket are Type 302 stainless steel. Furnished with a straight cam and two mounting screws. ***Latch kit*** has a rod and a rod guide. Guide requires M6 screws for mounting (not included).

To Order: For Style D and Style E latches, please specify unlatching direction: counterclockwise to unlatch or clockwise to unlatch.

Two-Point Latches

A paddle handle activates the top and bottom spring-loaded latching points. The handle itself does not latch. Mount vertically or horizontally. Handle is zinc with a black powder-coated finish; slide-bolt housing is zinc-plated steel; slide bolt is plastic; all other working parts are zinc-plated steel. Handle housing fits in a 4″ Lg. × 1 11/16″ Wd. opening.

Furnished with a mounting bracket, two 1/4″ Dia. × 48″ Lg. connecting rods (can be cut down), and two slide bolts. Bolt extension is 5/8″. Slide bolt housings are 4 1/4″ Lg. × 1 3/4″ Wd. with a 1 3/16″ projection. Mounting holes are 1 3/4″ and 1 1/4″ center-to-center. Require eight 10-24 mounting screws (not included).

Key-locking latch has a shuttered keyway for protection from the elements. Comes with two keys.

Extra-Large Door Three-Point Latches

Side, top, and bottom latching points secure large doors that are subject to strenuous use such as those on trucks and large access doors. Made of zinc-plated steel with iron slide bolts. The outside handle is 7 1/2″ long and has a 5/8″ Sq. × 6″ Lg. spindle that mounts through the door. An inside safety-release handle opens the latch even if the outside handle is locked. Inside handle is 9 1/4″ long and surface mounts to the back of the door.

Latches are reversible for right- and left-hand doors. They have a 3 1/16″ long straight cam for side latching. For top and bottom latching, rods connect the top and bottom slide bolts, which have a 1 1/2″ bolt extension. One rod is 48″ long and the other is 36″ long (see image for max. reach). Use a hacksaw to cut rods and spindle to size. Require 1/4″ dia. mounting screws (not included). Screw holes on cam housing are 7 3/8″ and 1 1/4″ center-to-center; on slide bolt housings they are 3 1/8″ and 2 3/4″ center-to-center.

5″	2 1/4 ft.-7 1/2 ft.	2 1/4″	2 3/8″	1272A12	101.71

Remote Release Cable Latches

Operate latches around corners and other obstructions—a flexible cable connects the latch and the T-handle. Pull on the handle to retract the spring-loaded bolt. Min. bend radius of the cable is 1 1/2″. The recommended max. amount of total bending is 720°. Through-hole mount the handle and bolt housing or surface mount them using the included mounting plates. The through-hole mounting size is 1/2″ for the handle and 9/16″ for the bolt housing.

Handles are plastic. Bolts are zinc-plated steel. Mounting plates are 12-ga. steel with a black-oxide finish and require four #10 screws (not included). Strike plates are Type 304 stainless steel and require three 1/4″ screws (not included).

To Order: Please specify cable length from those listed. *Note:* Cable length for double-point latch is for each length of cable.

About Draw Latches

Draw latches operate by pulling surfaces together and holding them closed. They are also known as tension latches.

Latch distance is how far apart a mounted latch can be from the surface it's drawing to itself. Specifically, it's the distance between the center of the mounting hole closest to the latch arm and the farthest inside surface of the latching arm when the latch is closed.

The ***overall length*** listed includes the strike.

G *Nonlocking*

H

J

K

L

A great choice for light duty latching on tool boxes, chests, cabinets, and carrying cases. Latches have a fixed latch distance. Mounting screws not included.

Styles C and ***G*** are strikeless; they hook into a lip or notch in the item being latched.

Style C has a nonmarring vinyl-dipped blade.

Style F has a safety catch to prevent accidental opening.

Key-locking latch (Style L) opens with key number 931A and comes with one key. It has a simple locking mechanism without pins and discs.

Polypropylene and Rubber Draw Latches

M

N

P

Nonmetal bodies make these latches corrosion resistant. Use for light duty applications. Latch distance is fixed. Mounting screws not included.

Polypropylene latches have polypropylene strikes. Temperature range is 32° to 150° F.

Rubber latches absorb vibration and stretch to compensate for slight misalignment. Strikes are Type 304 stainless steel. Temperature range is –20° to +120° F.

Type 304 Stainless Steel Snap Slide Latches

To secure overlapping components, engage the slide and the mating stud until they snap together. Latches resist shock and vibration. They are made of Type 304 stainless steel for corrosion resistance. Each set includes a slide and a stud. When assembled, latch is 1 13/16" Lg. × 11/16" Wd. × 1/2" Ht. Stud has a 3/8" dia. head. 1872A72 includes a steel spacer.

For Mounting Surface Thickness	Latch Distance (Length of Slide)		
0.046"-0.080"	5/8"	**1872A71**	$5.48
0.081"-0.128"	5/8"	**1872A72**	5.83

Rubber Pull Handle Draw Latches

Made of synthetic rubber, the handle and body stretch to fit the strike and to compensate for misalignment. They also absorb vibration. Rubber won't scratch painted surfaces and resists weather, oil, chemicals, and dirt. Color is black. Mounting screws not included.

●Latch arm is 17-7 PH stainless steel. ♦Latch arm is 400 series stainless steel.
✓ Latch is strikeless; it hooks into a lip or notch in the item being latched.

Work-Load Rated Rubber Draw Latches

M

N

The black EPDM rubber arm on these latches resists corrosion, absorbs vibration, and stretches to compensate for slight misalignment. Latches have a longer reach than standard draw latches. All are nonlocking. Mounting screws not included. ***Style M*** latches have a temperature range of –40° to +176° F. ***Style N*** latches have a temperature range of 0° to +200° F.

Note: Work load limit is the maximum amount of force the latch can withstand without affecting its operation or appearance.

♣Strike is glass-filled nylon.

Work-Load Rated Gasket-Sealing Draw Latches

P

Q

Bring surfaces together with the extra benefit of downward compression. Ideal for use on doors with a gasket, latches provide a tight hold and assist the sealing function of your gasket. Plus, all have a work load rating. A safety catch prevents accidental opening. Mounting screws not included.

Padlockable latches have a maximum padlock shackle diameter of 1/4″.

Note: Work load limit is the maximum amount of force the latch can withstand without affecting its operation or appearance.

For information about draw latches, see page 2958.

Work-Load Rated Versatile-Mount Draw Latches

Each latch comes with a variety of strikes, so you can choose the best mounting direction for your application. Mounting screws not included.

Nonlocking Latches with Safety Catch—Have a secondary release to prevent accidental opening.

Note: Work load limit is the maximum amount of force the latch can withstand without affecting its operation or appearance.

★ Overall length and width includes longest and widest strike.

Work-Load Rated Adjustable Draw Latches

Adjust the latch distance in applications that require work load ratings. All latches have a threaded rod that allows you to change the latch distance to compensate for gasketing and misalignment. Choose latches with an ***enclosed*** or ***exposed*** threaded rod (on enclosed latches, the threaded rod is covered by the handle when the latch is closed). Mounting screws not included. ***Style H*** latches have a yellow vinyl-coated handle.

Nonlocking Latches with Safety Catch—Have a secondary release to prevent accidental opening.

Note: Work load limit is the maximum amount of force the latch can withstand without affecting its operation or appearance.

■ Overall length includes strike; measured with rod extended to maximum latch distance.
✓ Latch is strikeless; it hooks into a lip or notch in the item being latched.

Super Duty Work-Load Rated Adjustable Draw Latches

Demanding applications require latches with the highest work load ratings we offer. Use these latches for heavy duty jobs such as large-equipment latching. All have an exposed threaded rod that allows you to change the latch distance to compensate for gasketing and misalignment. Mounting screws not included.

Nonlocking Latches with Safety Catch—Have a secondary release to prevent accidental opening.

Note: Work load limit is the maximum amount of force the latch can withstand without affecting its operation or appearance.

For information about draw latches, see page 2958.

Work-Load Rated Multidirection Draw Latches

Surface Mount

Inside-Corner Mount

Outside-Corner Mount

Similar to latches used in the racing industry, these resist pull and vibration from side-to-side, front-to-back, and up-and-down forces. As you close the latches, an integrated slide bolt extends into the strike for secure latching. Mounting screws not included.

Nonlocking Latches with Safety Catch— Have a secondary release to prevent accidental opening.

Padlockable Latches— All accept padlocks with up to a 3/16″ shackle dia.

Note: Holding capacity is the maximum amount of force the latch can withstand without breaking.

Spring Tension Draw Latches

A

B

C

Padlockable

D

Padlockable

When the latches are fully closed, their compression springs provide constant holding tension for secure latching. The springs begin compressing when the latch engages the strike and continue compressing until the latch closes. Mounting screws not included. Choose latches with ***internal springs*** or latches with ***external springs*** (internal springs are covered by the latch housing).

Nonlocking Latch with Safety Catch— Has a secondary release to prevent accidental opening.

Note: Work load limit is the maximum amount of force the latch can withstand without affecting its operation or appearance.

▲ No screw holes; designed for welding. ● Made of plain steel.

Corner-Mount Spring Tension Draw Latches

Nonlocking with 90° Angle Strike

Padlockable with Safety Catch and Straight Strike

Mount latches on a corner to draw perpendicular surfaces together. All have compression springs that provide constant holding tension for secure latching—especially useful for latches that are subject to vibration. Made of polished Type 304 stainless steel. Mounting screws not included.

Padlockable Latch with Safety Catch— Has a secondary release to prevent accidental opening. Latch accepts a padlock with up to a 3/16″ shackle dia.

Latch Distance	Overall Size Lg.	Overall Size Wd.	Overall Size Proj.	Screw Size	Strike

Panel/Partition Draw Latches

E

F

G

Pull panels together for a tight seal. Latches require a 5/16″ hex key (not included) to latch and unlatch. A hole must be drilled in the panel for hex key access. Made of zinc-plated steel. Mounting screws not included.

Styles E and ***F*** have both side and back mounting holes, so they attach to the side of the panel or mortise into the panel.

Style G has front tab mounting holes for mortise mounting.

Note: Work load limit is the maximum amount of force the latch can withstand without affecting its operation or appearance.

Flush-Mount Turn-to-Open Draw Latches

After it's mounted, the latch creates a nearly flat surface that protects it from damage and allows the halves to mate securely. Latches are great for securing crates and cases. Lift the handle and turn 180° to open and close. All are spring-loaded to compensate for misalignment. Made of zinc-plated steel. Mounting screws not included.

Note: Dimensions given are for assembled top and bottom halves.

Push-to-Open Grab Latches

Forget about knobs, handles, and pulls. Push your door and these spring-loaded latches release the strike; push again to catch the door. Latches are for surface mounting. Furnished with mounting screws.

Style 4 latch has a brass-plated steel case and brown thermoplastic catch and strike. Not rated for temperature.

Style 5 latches have a thermoplastic case, catch, and strike. 10825A28 is black; A26 is brown. Temperature range is –22° to +194° F.

Gate Latches

All latches surface mount and are reversible for right- and left-hand use. *Flush latches* are for gates that close flush with the post. *L-shaped latches* are for gates that overlap the post when closed.

Nonlocking Latches— A hidden push-button release on the bottom retracts the bolt; this discourages unwanted entries, but allows access to those who know it's there. Bolt extension is 7/16″.

Padlockable Latches— Use a padlock (not included) with these latches to secure gates and doors. Push to close; pull up on the latch arm to open. Arm has a 3/16″ dia. hole for a pull cord or chain, except 1774A44 has a 1/8″ dia. hole.

Key-Locking Latch— Latch is highly corrosion resistant and locks with a key for extra security.

About Push-to-Close Latches

When choosing between a face-mount latch and an edge-mount latch, consider the offset of your door. ***Offset*** is the space between the front of the door and the frame.

Face-Mount Latches— Mount horizontally to the front of the door with the strike mounted on the frame. Strike accommodates flush or offset doors.

Edge-Mount Latches— Mount vertically to the side edge of the door with the strike mounted behind it on the face of the frame. Latches need a minimum ¾″ offset.

Door Face-Mount Latches

1

2

3

4

Mount latches to the front of doors on refrigerators and industrial enclosures. Styles 2-4 can mount to oven doors. Use for right- and left-hand doors. Mounting screws not included.

(1) Nonlocking Latches— Come with three fixed strikes. Not recommended for oven doors.

(2&3) Padlockable Latches— Have an adjustable strike to compensate for changes in offset caused by sagging doors and worn or flattened gaskets. Maximum padlock shackle diameter is ¼″.

(4) Key-Locking Latches with Antimicrobial Handle— An antimicrobial coating on the handle inhibits bacterial growth. Handle is malleable iron. Adjust the strikes to compensate for changes in offset caused by sagging doors and worn or flattened gaskets. Latches come with two keys and open with key number 105. NSF certified. *Latch for smaller offsets* accommodates a slight negative offset for recessed doors.

Door Face-Mount Latches with Emergency Release Handle

5&6

7

8

An emergency release handle offers a means of escape if the door closes with someone inside your enclosure. Use for right- and left-hand doors on walk-in freezers and coolers, ovens, paint booths, and industrial enclosures. All latches mount to the front of the door. Strikes are adjustable to compensate for sagging doors and worn or flattened gaskets.

Mounting screws are not included. Latches require ¼″ mounting screws, except 1840A12 and 1840A14 require #10 screws. *Style 8* latches also require #10 screws for mounting the release handle.

Style 5 is iron with a silver powder-coated finish. ***Style 6*** is stainless steel. ***Styles 7 & 8*** have a chrome-plated zinc body and strike with a chrome-plated malleable iron handle.

(8) Key Locking and Padlockable Latches— Have a locking cylinder and also accept a padlock. Latches come with two keys and open with key number 105. *Latches for smaller offsets* accommodate a slight negative offset for recessed doors. *Latches with fiberglass rods* are ideal for freezers because they work in temperatures down to −40° F.

For information about push-to-close latches, see page 2964.

Door Face-Mount Pressure-Venting Latches

Internal pressure in equipment such as spray booths and drying ovens automatically opens these latches. Manually open the latches by pulling on the handle. Mounting screws not included. All are FM approved.

Release force is the amount of pressure an enclosed area can sustain before the latch opens. Adjust the catch to make the latch more or less sensitive to pressure. To adjust the catch on Styles 1 and 2, use a slotted screwdriver. For Style 3, use a 3/16″ hex key.

Styles 1 & 2 are reversible for use on right- and left-hand doors. *Style 3* is not reversible. **To Order:** For Style 3, please specify right or left hand. To determine handing, look at the outside face of your door: if the hinges are on the right, order a right-hand latch; if the hinges are on the left, order a left-hand latch.

Door Edge-Mount Latches

Mount latches on the side edge of doors on refrigerators, ovens, and industrial enclosures. Use for right- and left-hand doors. Latches require a minimum 3/4″ offset between the front of the door and the front of the frame. They are adjustable to compensate for changes in offset caused by sagging doors and worn or flattened gaskets. Latches are chrome-plated zinc, except Style 6 has a black composite handle. Mounting screws not included.

Padlockable Latch—Maximum padlock shackle diameter is 5/16″.

Key-Locking Latches—Come with two keys. *Style 5* opens with key number 01. *Style 6* opens with key number 1313 and has a magnetic strike for airtight closure.

Push-Knob Pull-to-Open Latches

To open the latches, push in the knob and pull the tab. Latches are black thermoplastic. Require #6 mounting screws (not included). Bolt extension is 5/16″. Temperature range is 0° to 150° F.

Note: Max. latch distance is the maximum allowable space between the bolt and the front surface of the door.

Key-Locking Latch—Comes with two keys. Turn key 180° to the left to unlock. Latch also operates without the key when unlocked.

Lever Pull-to-Open Metal Door Latches

Lift the lever to unlatch doors on circuit breakers and fuse boxes as well as other metal enclosures. Push the door closed to latch. Case is zinc-plated steel; lift lever is zinc with a dull chrome finish.

Horizontal Mount—Reversible for right- and left-hand doors. Furnished with a hardened-steel mounting clip to hold the latch in place.

Vertical Mount—Choose right or left hand. To determine handing, look at the outside face of your door: if the hinges are on the right, order a right-hand latch; if the hinges are on the left, order a left-hand latch. Require #8 mounting screws (not included).

Recessed-Handle Pull-to-Open Latches

1 Key Locking

2 Key Locking

3

Also known as paddle latches, these are often seen on electrical panels, cabinets, and lockers. Pull the recessed handle to open; the paddle is spring-loaded, so it returns to the closed position on its own. Reversible for right- and left-hand use. *Note:* Max. latch distance is the maximum possible space between the bolt and the front surface of the door.

(1) Mounting hardware is concealed for a finished look. All latches include a mounting bracket and mounting screw. *Key-locking latches* come with two keys and open with key number CH751.

(2) Mount with #6 screws (not included) or weld in place. *Key-locking latch* comes with one key and opens with key number CH501.

(3) Mounting hardware is concealed for a finished look. Requires #8 mounting screws (not included).

Recessed-Ring Pull-to-Open Latches

Plastic

When you release the spring-loaded ring, it returns to its recessed position to stay out of your way. Latches open from two sides. From the outside, pull the recessed ring to unlatch. From the inside, slide the release tab on the back of the latch. All latches are nonlocking with a stainless steel spring and strike for durability and corrosion resistance. Furnished with a mounting bracket and strike. The strike requires #10 screws (not included). *Note:* Max. latch distance is the maximum possible space between the bolt and the front surface of the door.

Plastic latches have a temperature range of 0° to 140° F.

Turn-to-Open Latches

4

Key Locking

5

Black Finish

6

Optional Sealing Cover for Style 6

Latches operate with the turn of a knob or a key. All are for through-hole mounting on panels and doors. Bolt extension is 5/16″. *Note:* Max. latch distance is the maximum possible space between the bolt and the front surface of the door.

(4) Exposed Knob Latches— The knob is exposed for quick access. A 90° turn to the left or right opens the latch. Made of chrome-plated zinc with a plastic knob. Require #6 mounting screws (not included). Temperature range is 0° to 150° F. *Key-locking latches* come with two keys. They also operate without the key when they are unlocked.

(5) Pop-Out Knob Latches— When not in use, you can push the knob in so it's flush; it pops out with a touch. Turn the knob 45° to the left or right to open the latch. Latch secures with the knob in or out. Made of plastic and stainless steel for corrosion resistance. Require #10 mounting screws (not included). Temperature range is –20° to +140° F. 1248A11 has a black matte finish; 1248A12 has a chrome-plated finish.

(6) Flush-Face Latches— The low-profile design means less of the latch is exposed, reducing the potential for damage. Latches require the key for operation. A 90° turn to the left or right opens the latch. Made of chrome-plated zinc. Require #6 mounting screws (not included). Locks come with two keys.

Optional sealing covers protect flush-face latches. Made of black plastic. Temp. range is –40° to +175° F.

Spring-Loaded Snap-Arm Catches

You don't need a mating strike for this catch—its spring-loaded arm snaps to engage when you close your screen or storm door. The arm applies pressure to the door to keep it closed. Open the door to release the catch. Made of zinc-plated steel with rubber rollers. For surface mounting. Furnished with mounting screws.

Roller Catches

Doors stay closed thanks to the pressure of plastic rollers against the strike. Furnished with mounting screws, except Style 1.

Style 1 has elongated mounting holes that allow for adjustment. Max. temp. is 150° F.

Style 2 has elongated mounting holes that allow for adjustment. Not rated for temperature.

Styles 3-5 have an adjustment screw to adjust the roller projection from 0″ to 3/8″ to compensate for misalignment. Temp. range is –100° to +300° F.

Grab Catches

The catch grabs and holds the strike to keep your door shut. For surface mounting. Mounting screws not included, except Styles 7, 9, and 12 come with screws.

Plastic catches have a temperature range of –22° to +150° F.

Style 11 has a screw for adjusting the force needed to open and close the catch.

Multidirection Ball-Style Grab Catches

Each catch has top and bottom balls that can grab the strike from the direction that's best for your application. Furnished with mounting screws. ***Brass catches*** have screws in the top and bottom to adjust the force needed to open and close the catch.

Two Way— Strike can enter from either side. Made of brass with two stainless steel balls. For surface mounting. Meet ANSI 156.9.

Three Way— Strike can enter from front or either side. For surface mounting. *Brass catches* have two steel balls. *Type 316 stainless steel catches* have two Type 316 stainless steel balls.

Four Way— Strike can enter from front, back, or either side. Made of brass with two stainless steel balls. For surface or mortise mounting. Meet ANSI 156.9.

Spring-Loaded Grab Catches

All of the catches have springs that assist them in applying pressure to the strike to keep your door closed. The case and strike are black plastic and the spring is stainless steel to resist corrosion. For surface mounting. Mounting screws not included.

Catches— Temperature range is –20° to +140° F. Meet UL 94HB for flammability.

Catches with Electrical Switch— An electrical switch enables these latches to power a light or other signal to indicate whether the door is open or closed. Not for use as a safety interlock. Temperature range is –40° to +140° F. Meet UL 94V0 for flammability.

Magnetic Catches

A common sight on audio/visual cabinets, these catches use magnetism to keep doors closed. Strikes are steel or stainless steel. Furnished with mounting screws, unless noted. Not rated for temperature.

Note: Pull power rating given is based on installation with the furnished strike plate; pull power may be different based on your application.

Style 6 has adhesive on the back for easy installation. ***Style 8*** strike is a permanent tack for mounting to a door. ***Style 9*** mounts with the strike on the inside of the cabinet rather than on the door. ***Styles 10, 11, 13 & 14*** are for glass and lightweight cabinet doors.

Specialty Magnetic Catches

Keep doors closed in clean room, food service, and high-temperature environments. Catches are made of plastic or stainless steel for corrosion resistance. All catches have a stainless steel strike. Mounting screws not included.

(15&16) Clean Room Catches—For use in sanitary environments. The magnet is encapsulated in white plastic, so it won't give off particulates when it meets the strike. Temperature range is 14° to 176° F.

(17) Food-Safe Catch—The magnet is completely sealed in gray polyacetal plastic, eliminating crevices that can trap food particles. NSF certified. Temperature range is 14° to 176° F.

(18) High-Temperature Catch—This catch withstands temperatures up to 482° F. Min. temperature is 14° F. Made of stainless steel.

For information about pull handles, see page 2970.

Ball-End Spring-Loaded Bullet Catches

The ball is spring-loaded to apply pressure against the strike to keep your door closed.
Style 1—Catch is nickel-plated steel. Requires #4 mounting screws (not included).
Style 2—Catches mortise mount. Case is brass. Ball and strike are steel. Furnished with a steel brad nail to surface mount the strike to the door frame.
Style 3—Catches and strikes mortise mount. Case, ball, and strike are brass. The catch is adjustable; push the ball in and rotate it to compensate for misalignment. Furnished with steel screws.

Open-Ended Pull Handles and Knobs

Access handles and knobs from multiple angles. Mounting screws are included, except Style 16 mounts with solvent adhesive (for adhesive, see 7528A13 on page 3421).
Style 13—Maximum temperature is 194° F.
Style 15—*Type 304 stainless steel knobs* are NSF certified. *ABS plastic knobs* are not rated for temperature.
Style 16—Not rated for temperature.

About Pull Handles

Round Grip—A circular gripping surface allows your hand to pivot in any direction.

Oval Grip—A rounded edge on the gripping surface conforms to your hand and offers more control than round grip.

Rectangular Grip—The flat gripping surface prevents your hand from slipping or repositioning, but may be less comfortable than round and oval.

Handle strength varies by fabrication process and material.

Fabrication Process		Material
Forged	**Strongest**	Titanium, Stainless Steel
Cast	↑	Steel
Extruded		Zinc
Formed		Aluminum, Brass
Stamped		Plastic, Rubber

Pull Handles with Threaded Holes

Mounting screws are completely hidden because these handles mount from behind your material. Furnished with mounting screws, unless noted. **Style 1**—*ABS plastic handles* are not rated for temperature. **Style 7**—Minimum temperature is not rated. Maximum temperature is 215°F. **Style 8**—Temperature range is –40° to 320°F.

Load-Rated Pull Handles

Meet the demands of your heavy duty applications. Note: Load cap. stated is for force pulling straight out from the handle.
Round Grip—Mounting screws not included.
Oval Grip—Mounting screws not included. *Nylon* and *plastic handles* have a temperature range of –20° to 230° F.
Rectangular Grip—Temperature range is –40° to 140° F. Styles 6 and 7 come with mounting screws. Styles 8-10 do not include mounting screws. Styles 9 and 10 have a snap-on cover to conceal screws.

Stay-Put Folding Pull Handles

Detents keep the handles in the extended or folded position—they won't move until you reposition them. Ideal for use on instrumentation cases or anywhere rattling is undesirable. Grip is round. **Style 7** handles come with mounting screws.

90° folding handles have two positions. **180° folding handles** have three positions.

Surface-Mount Folding Pull Handles

1 2 3 Cushion Grip 4 5 6 7 8 9 10

Also known as case handles, these pull handles fold to stay out of your way when not in use. Great for use on trash cans, chests, boxes, and cabinets. Mounting plates have unthreaded through holes (except mounting plates on weld-on handles). Plates are 1/16″ thick, except Style 7 plate is 1/8″ thick. Mounting screws not included.

Handles have a 90° stop, except Styles 6 and 10. Style 6 has a 120° stop. Style 10 does not have a stop; the handle automatically drops when you release it.

Spring-loaded handles snap flat to stay out of the way when not in use. **Cushion-grip handles** have a rubber grip (except Style 10 has a vinyl grip) for comfort. Temperature range is –40° to 150° F for rubber; vinyl grip is not rated.

Recessed Folding Pull Handles

Fold handles into the mounting plate—they're recessed to stay flush with the mounting surface. Handles have a 90° stop, except Styles 11 and 12 have a 110° stop. All require a cutout in your mounting surface.

Styles 11-16—Mounting plates have unthreaded through holes. *Style 11* comes with screws. *Styles 12-16* do not include screws.

Style 17—Mounting plate has 3/8″ deep threaded holes. Mounting screws are included.

Spring-loaded handles snap flat to stay out of the way when not in use. **Cushion-grip handles** have a rubber grip for comfort. *Style 15* handles have a temperature range of –40° to 240° F. *Style 17* handle has a temperature range of –10° to 200° F.

Load-Rated Folding Pull Handles

A load rating lets you know the capability of these handles. Fold them out of the way when not in use. Handles have a 90° stop and a round grip. Mounting plates are 1/16″ thick and have unthreaded through holes. Note: Load capacity is based on the use of one handle.

Style 18—Surface mount with the included mounting screws.

Styles 19&20—Handles are spring loaded, so they snap flat when not in use. All have a polypropylene grip; temp. range is 14° to 212° F. Mounting screws not included. *Style 19* handles surface mount. *Style 20* handles are recessed into the mounting plate.

About Hinges

Leaves Lay Flat

Flat Folded Flat

Hinges with Lay Flat Leaves— When the hinge is folded, the total thickness is equal to two times the thickness of a single leaf, plus the pin diameter. See pages 2976-2984 and 2987.

Tight Clearance

Flat Folded Tight Clearance

Hinges with Tight-Clearance Leaves— Also known as swaged. There is minimal clearance between the leaves when the hinge is folded. See pages 2980 and 2985-2987.

Half-Mortise/Half-Surface Mount

Half Mortise Half Surface

Hinges with Half-Mortise/Half-Surface Mount Leaves— One leaf is mortise mounted and the other leaf is surface mounted. For use where a traditional mortise mount hinge isn't suitable because either the door or the frame is damaged. See pages 2982 and 2985.

Offset

Flat Folded Offset

Hinges with Offset Leaves— When the hinge is folded, the distance between the leaves is larger than the pin diameter. Commonly used for gasketing applications. See pages 2980-2981.

Surface-Mount Piano Hinges

Unfinished Steel Piano Hinges with Brass Pins and without Holes

Similar to our Unfinished Steel Piano Hinges without Holes, but with brass pins that resist corrosion and wear better over time than steel pins. You choose how to surface mount these hinges—they don't have mounting holes. Spot weld them in place or drill holes for rivets or screws. Hinges can be cut with a hacksaw. From the folded position, the range of motion is 270°.

Electrogalvanized Steel Piano Hinges without Holes

Electrogalvanizing gives these hinges the necessary corrosion resistance for use in heating, ventilating, air-conditioning, and other sheet-metal applications. Pin and leaves are both galvanized, so you can either paint hinges or use them without additional finishing. Designed for surface-mount applications, these hinges don't have mounting holes. Spot weld them in place or drill holes for rivets or screws. Hinges can be cut with a hacksaw. From the folded position, the range of motion is 270°.

Brass Piano Hinges without Holes

Made entirely of brass, these hinges perform extremely well in corrosive conditions. They don't have mounting holes, so you can choose how to surface mount them. Spot weld them in place or drill holes for rivets or screws. Hinges can be cut with a hacksaw. From the folded position, the range of motion is 270°.

Type 304 Stainless Steel Piano Hinges without Holes

Leaves Lay Flat

Hinge pin and leaves are made entirely of unfinished Type 304 stainless steel for good corrosion resistance. Designed for surface-mount applications, these hinges don't have mounting holes. Spot weld them in place or drill holes for rivets or screws. Hinges can be cut with a hacksaw. From the folded position, the range of motion is 270°.

Don't see the piano hinge you need? Just tell us what you're looking for and we'll get it for you.

Type 316 Stainless Steel Piano Hinges without Holes

Compared to Type 304 stainless steel hinges, these deliver a higher level of corrosion resistance. The pin and leaves are made entirely of unfinished Type 316 stainless steel. You choose how to surface mount these hinges—they don't have mounting holes. Spot weld them in place or drill holes for rivets or screws. Hinges can be cut with a hacksaw, except for hinges with 0.187″ thick leaves, which can be cut with a band saw. From the folded position, the range of motion is 270°.

Aluminum Piano Hinges without Holes

Aluminum construction makes these hinges corrosion resistant and lighter than steel or brass hinges. There are no mounting holes, so you decide how to surface mount the hinges. Spot weld them in place or drill holes for rivets or screws. Hinges are unfinished and can be cut with a hacksaw. From the folded position, the range of motion is at least 270°.

Military Specification Aluminum Piano Hinges without Holes

Leaves Lay Flat

Unlike other aluminum hinges that are stamped or formed from a flat piece of metal, these military specification hinges have leaves that are extruded, making them harder and more wear resistant. Leaves are made of unfinished Alloy 2024-T3511 aluminum. Pin is cadmium-plated Type 302 stainless steel. The pin hole is drilled and the knuckles are milled. Designed for surface-mount applications, these hinges don't have mounting holes. Spot weld them in place or drill holes for rivets or screws. They can be cut with a hacksaw. From the folded position, the range of motion is at least 270°.

Piano Hinges for Tight Clearance without Holes

Tight Clearance

Since the leaves are close together when folded, these hinges are an excellent choice for doors with limited space, such as electrical cabinets. Designed for surface-mount applications, these hinges don't have mounting holes. Spot weld them in place or drill holes for rivets or screws. The fasteners are concealed when the door is closed. Hinges can be cut with a hacksaw. The pin and the leaves are made from the same material. From the folded position, the range of motion is 270°.

Offset Piano Hinges for Extra Clearance without Holes

Offset

In the folded position, the distance between the leaves is larger than the pin diameter. This offset design provides a gap to accommodate gasketing or trim attached to the door. There are no mounting holes on these hinges, so you decide how to surface mount them. Spot weld them in place or drill holes for rivets or screws. Hinges can be cut with a hacksaw. The pin and the hinge leaves are made from the same material. From the folded position, the range of motion is at least 225°.

Piano Hinges with Holes

All of these surface-mount hinges have countersunk mounting holes. Hinges can be cut with a hacksaw. The pin and the hinge leaves are made of the same material. From the folded position, the range of motion is 270°, except for brass hinges, which have a 180° range of motion. Mounting screws not included.

Steel— The plated and finished steel hinges are countersunk before they are plated or painted for complete coverage and better corrosion resistance.

Don't see the piano hinge you need? Just tell us what you're looking for and we'll get it for you.

Load-Rated Piano Hinges with Bearings and Holes

Not your ordinary piano hinges, these are load rated for heavy doors. They have nylon bearings spaced along the length of the hinge—the weight of the door is evenly distributed on the bearings for smooth door opening. One leaf mounts to the edge of the frame; the other mounts to the door surface or edge (see below). Minimum clearance is between the frame and the door. Ideal for replacing butt hinges on new and existing doors. Reversible for right- and left-hand doors. Pin is stainless steel. Can be cut with a band saw or hacksaw. From the folded position, the range of motion is 180°. Fire rated for 90 minutes for hollow metal and composite core wood doors. All have punched and countersunk mounting holes. Furnished with #10 screws; Style A also comes with #8×3/4″ fasteners.

	Max. Cap., lbs.	Lg.	Leaf Thick.	Pin Dia.	Knuckle Lg.	Mounting Frame	Mounting Door	Max. Door Thick.

Load-Rated Aluminum Geared Hinges

Instead of having pins and knuckles that could bend or shear, these aluminum hinges are geared with nylon bearings to minimize door sag and deflection. Plus, they're load rated to handle heavy doors. The weight of the door is evenly distributed on the bearings, which are spaced along the length of the hinge—the result is smooth, easy door opening. Hinges surface mount. Minimum clearance is between the frame and the door. From the folded position, the range of motion is 180°.

Without Holes— Weld in place or drill holes for screws.

With Holes— Excellent for replacing butt hinges, they're also used anywhere a door has been ripped out of the frame. Hinges have punched and countersunk holes. Furnished with snap-on security molding and #12 and 1/4″ screws.

Plastic Piano Hinges without Holes

1 1/2″ Open Width

2″ and 3 1/2″ Open Widths

A lighter weight, more corrosion-resistant alternative to metal piano hinges, these plastic hinges have rigid leaves and a flexible elastomer middle instead of a pin. The pinless construction results in smooth, silent operation. There are no mounting holes—surface mount hinges with adhesive, screws, nails, or other fasteners. Can be cut with a hacksaw. The 1 1/2″ open width hinges are for indoor use; the 2″ and 3 1/2″ open width hinges are for indoor and outdoor use. All have a white middle, except for 11195A11, which has a clear middle. From the folded position, the range of motion is 360°, unless noted. Temp. range is 45° to 150°F, unless noted.

PVC— Leaves are PVC; this material is the most widely used vinyl, but has poor impact strength.

Acrylic— Leaves are clear acrylic; this material has good clarity, but poor impact strength.

PETG— Leaves are clear PETG, which has excellent clarity and good impact strength.

Open Wd.	Leaf Lg.	Leaf Thick.	Middle Material	Clear PVC		White PVC		Clear Acrylic		Clear PETG

▲ From the folded position, the range of motion is almost 180°. ■ Leaf thickness is 1/8″. Max. temp. is 100°F.

Harsh-Environment Plastic Piano Hinges without Holes

Made of tough polyolefin plastic, these hinges resist saltwater, oil, most chemicals (including solvents), temperature extremes, and damaging UV rays. All hinges have rigid leaves and a flexible webbed middle instead of a pin for smooth, silent operation. Hinges surface mount using adhesive, screws, nails, or other fasteners. Can be cut with a box cutter or razor. For indoor and outdoor use. From the folded position, the range of motion is 360°. Temp. range is –40° to +180°F.

To Order: Please specify color (black, gray, or white) and length from those listed below. The last length listed is the maximum continuous length.

Available Lengths	Leaf Thick.	1 1/8″ Open Width Per Ft.		1 1/2″ Open Width Per Ft.		2″ Open Width Per Ft.		3″ Open Width Per Ft.	
4′, 8′, 25′	1/8″	**1588A71**	$3.29	**1588A72**	$3.86	**1588A73**	$5.65	**1588A74**	$8.18

Slip-Over Panel Plastic Piano Hinges

No need for screws to mount these hinges; the leaves are ribbed channels that press onto panel edges for a snug fit. All have rigid leaves with a flexible elastomer middle instead of a pin. For indoor use. From the folded position, the range of motion is 180°, unless noted.

PVC— Leaves are PVC; this material is the most widely used vinyl, but has poor impact strength. **To Order:** Please specify hinge color: clear or white.

Polypropylene— Leaves are polypropylene, which has good impact strength. Middle is the same color as the hinge. **To Order:** Please specify hinge color: black or white.

Acrylic— Leaves are clear acrylic; material has good clarity, but poor impact strength.

PETG— Leaves are clear PETG, which has excellent clarity and good impact strength.

About Hinge Specifications

Surface-Mount Hinges without Holes

You have mounting options because these hinges don't have holes. To mount metal hinges, spot weld in place or drill holes for rivets or screws. Mount acrylic and polycarbonate hinges with solvent-based adhesive. To mount HDPE and PVDF hinges, heat weld in place or drill holes for rivets or screws. All are reversible for right- and left-hand mounting. The pin and the leaves are made of the same material, unless indicated otherwise. From the folded position, hinges have at least a 265° range of motion, except for polycarbonate, HDPE, and PVDF hinges, which have a 180° range of motion. ***Hinges with a nonremovable pin*** deter tampering. For information about hinges, see page 2976.

Brass Miniature Surface-Mount Hinges without Holes

Small enough to fit on your fingertip. These tiny, lightweight hinges don't have mounting holes; surface mount with solder or adhesive. All have unfinished brass leaves with a riveted middle instead of a pin. Reversible for right- and left-hand mounting. From the folded position, the range of motion is 180°.

★ Prices are 15% to 20% lower when you buy 10 or more hinges of the same size.

Surface-Mount Hinges with Holes

You don't have to prepare these hinges for mounting; they already have countersunk screw holes (unless noted). The holes on 1798A hinges are countersunk prior to coating to provide complete coverage for better corrosion resistance. Hinges are reversible for right- and left-hand mounting. The pin and the leaves are made of the same material, unless indicated otherwise. From the folded position, the range of motion is at least 180°, except for 1635A12 and 1635A22, which have a 90° range of motion. Mounting screws not included, unless noted. ***Style 6*** hinges have two pins and are typically used in double-door installations to reduce the number of hinges required.

● Holes are staggered. ♠ Holes are not countersunk. ♣ Pin is Type 304 stainless steel. ★ Mounting screws are included.

Clean Room Surface-Mount Hinges with Holes

Opening and closing these hinges won't generate material residue that can contaminate your environment. A great choice for clean rooms and labs, hinges have aluminum leaves, polyacetal bushings, and a Type 304 stainless steel pin.

Reversible for right- and left-hand mounting. From the folded position, the range of motion is 270°. Mounting screws not included.

Leaf Ht.	Open Wd.	Leaf Thick.	Pin Dia.	Screw Size	No. of Holes		
2 9/16″	2 23/64″	9/64″	13/64″	#12	4	**1795A1**	$19.56

Load-Rated Surface-Mount Hinges

Commonly used on heavy doors, prison doors, vaults, and other doors in security applications, these hinges have thicker leaves than other surface-mount hinges and have a large diameter, nonremovable pin to deter tampering. Reversible for right- and left-hand mounting, except adjustable hinges, which are handed (you choose either right- or left-hand mount). All have a steel pin. The pin in 10855A32, 10855A46, 1828A21, 1828A22, 1828A27, 1828A28, and the stainless steel hinges has a corrosion-resistant coating. From the folded position, the range of motion is at least 180°.

Hinges without holes install by spot welding or by drilling holes for rivets or screws.

Hinges with holes have countersunk holes, unless noted. All are furnished with tamper-resistant screws, unless noted.

Adjustable hinges can be adjusted 1/8″ up and down after door is hung—just turn the hex set screw on the top of the hinge. *1,000-lb. cap. hinges* have a 3/16″ screw; *3,000-lb. cap. hinges* have a 1/4″ screw. **To Order:** Please specify right-hand or left-hand mount.

Forged steel hinges have an oil hole for lubricating the bearings.

Pinless Plastic Surface-Mount Hinges with Holes

The pinless design of these one-piece hinges provides smooth, silent operation. Made of polyolefin plastic, hinges resist corrosion and harsh weather, plus they stay flexible in temperatures from –40° to +180°F. Holes are countersunk, unless noted. Reversible for right- and left-hand mounting. From the folded position, the range of motion is 270°. Mounting screws not included.

To Order: Please specify color: black or white.

♠ Holes are not countersunk.

Load-Rated Half-Mortise/Half-Surface Mount Steel Template Hinges

You only need one cutout (mortise) for these hinges—the offset design allows you to mortise mount one leaf and surface mount the other leaf. Perfect when damage to your door or frame makes using a traditional mortise hinge impossible. Just select a hinge that matches your mortise placement. The template design has uniform screw holes placed in a standardized, half-moon pattern that's identical from manufacturer to manufacturer. They're reversible for right- and left-hand mounting. Made of steel with a removable steel pin. Holes are countersunk prior to plating to provide complete coverage for better corrosion resistance. From the folded position, the range of motion is at least 180°. Furnished with mounting screws.

Hinges with bearings provide smooth operation on doors with or without a door closer.

Hinges without bearings are for doors without a door closer.

♣ Max. door weight based on three hinges per door with a max. door size of 7 ft. Ht. × 3 ft. Wd. × 1¾″ Thick.

Mortise-Mount Nontemplate Hinges

Mount these hinges into recessed cutouts (mortises) on your door's edge and frame for a neat, flush-mounted appearance. The nontemplate design means that the hole pattern differs among manufacturers; you can change your existing hole pattern from a template pattern. When the hinge is folded, the leaves are close together to fit into tight spaces. Use these hinges on solid and hollow-core wood doors.

Reversible for right- and left-hand mounting. The pin and the leaves are made of the same material. Holes are countersunk prior to coating (where applicable) to provide complete coverage for better corrosion resistance. From the folded position, the range of motion is at least 270°. Hinges are not recommended for use on doors with a door closer. Mounting screws are not included, unless noted.

Hinges with a nonremovable pin deter tampering.

★ Mounting screws are included. ● Open width is 1 5/8″. ◆ Leaf thickness is 0.085″. Pin dia. is 15/64″. ♥ Screw size is #9.
■ Has prime-coat finish.

Mortise Hinge Profile Cutters

Here's an easy way to make an exact cutout for mounting a mortise hinge. Just position the cutter on your wood door or frame and hit it with a hammer. Cutters have a depth scriber and cutting edges that leave a clean outline for a mortise. Use a chisel to remove the wood and make the mortise. Cutters are made of heat-treated alloy steel with a black finish.

For information about hinges, see page 2976.

Mortise-Mount Template Hinges

Without Bearings

With Bearings

Mortise

With Concealed Bearings

Security Hinge

Always predictable, these hinges are ready for mounting into recessed cutouts (mortises) on your door's edge and frame. The template design has uniform screw holes placed in a standardized, half-moon pattern that's identical from manufacturer to manufacturer. The mortise mounting style gives the hinges a neat, flush-mounted appearance. When the hinge is folded, the leaves are close together to fit into tight spaces. For use on wood and hollow metal doors. The fasteners are concealed when the door is closed.

Hinges are reversible for right- and left-hand mounting. Holes are countersunk prior to plating (where applicable) to provide complete coverage for better corrosion resistance. From the folded position, the range of motion is at least 180°. All hinges have eight holes and include #12 screws for mounting, except hinges with 3″ and 3½″ leaf heights, which have six holes and include #9 screws.

Hinges without bearings are not designed for use on doors with a door closer.

Hinges with bearings are for use on doors with or without a door closer. *Hinges with concealed bearings* have a slim-profile design that encompasses the pin head.

Security hinge has concealed bearings, security studs, and includes tamper-resistant screws. ***Hinges with a nonremovable pin*** deter tampering.

Wired Mortise-Mount Template Hinges

Transfer low-voltage current from the frame to your door to power electric locksets or exit devices—without any wires showing. The wires run through these hinges, which mount into recessed cutouts (mortises) on your door's edge and frame to give a neat, flush-mounted appearance. Wires are 28-ga. and approx. 11″ long. Max. current through the wires is 48 VDC/AC, 3.5 amps. The template design has uniform screw holes placed in a standardized, half-moon pattern that's identical from manufacturer to manufacturer. Reversible for right- and left-hand mounting. The pin and the leaves are steel. Pin is nonremovable. From the folded position, the range of motion is at least 180°. Furnished with mounting screws. UL listed.

No. of Wires per Leaf	Leaf Ht.	Open Wd.	Leaf Thick.	Pin Dia.	Screw Size	No. of Holes	Prime Coat		Dull Chrome		Dull Bronze

For information about hinges, see page 2976.

Surface-Mount Lift-Off Hinges

A *Right Hand with Holes*

B *Left Hand without Holes*

C *Right Hand without Holes*

D *Left Hand with Holes*

E *Left Hand with Holes*

F *Reversible without Holes*

Because the pin is permanently attached to the frame leaf and mates into the door leaf, you can quickly lift your door off these hinges—without removing the pin. Range of motion is measured from the folded position. Hinges are for surface mounting. Leaves and pins are made of the same material, unless noted.

Without Screw Holes—Weld in place or drill holes for rivets or screws.

With Screw Holes—All have four screw holes. The screw holes in Styles A, B, E, and F are punched prior to plating to provide complete coverage for better corrosion resistance. Mounting screws not included.

♣ Load capacity is based on two hinges per door. ★ Handing is determined from the pull side of the door. If the door pulls open to the right, use a right-hand hinge and vice versa.

Mortise-Mount Lift-Off Hinges

Mount these hinges into recessed cutouts (mortises) in your door's edge and frame for a neat, flush-mounted appearance. Ideal when there is minimal clearance between the door and the frame. The pin is permanently attached to the frame leaf and mates into the door leaf, allowing you to quickly lift your door off the hinge without removing the pin. The leaves and the pin are made of the same material. Holes are countersunk prior to plating to provide complete coverage for better corrosion resistance. Furnished with mounting screws.

Nontemplate—The hole pattern differs among manufacturers. From the folded position, the range of motion is 270°. Hinges are reversible for right- and left-hand doors.

Template—Hinges have uniform screw holes placed in a standardized, half-moon pattern that's identical from manufacturer to manufacturer. From the folded position, the range of motion is at least 180°. Hinges are handed; you choose a right-hand hinge or a left-hand hinge. Handing is determined from the push side of the door. If the door swings right, use a right-hand hinge; if the door swings left, use a left-hand hinge.

Nontemplate Reversible

♥ Maximum door weight based on three hinges per door, 50-100 daily openings, with a maximum door size of 7 ft. Ht. × 3 ft. Wd. × 1 3/4″ Thick., unless noted. ♣ Load capacity is based on two hinges per door.

Narrow-Profile Screw-Mount Lift-Off Hinges

When space is at a premium, these narrow, block-style hinges are a smart choice. The pin is permanently attached to the frame leaf and mates into the door leaf, allowing you to quickly lift your door off the hinge without removing the pin. Hinges have four mounting holes; mounting screws not included. Screws are concealed when the hinge is closed. Leaves and pins are made of the same material. From the closed position, hinges have a max. 180° range of motion. Load ratings are listed per hinge, unless noted. ***Overlay***—Hinges are reversible to work with both right- and left-hand doors that overlay their frames. ***Flush***—Hinges are for use on flush-mounted doors.

★ Handing is determined from the pull side of door. If a door pulls open to the right, use a right-hand hinge and vice versa. ● Load capacity based on two hinges per door.

Narrow-Profile Weld-On Lift-Off Hinges

Weld these narrow hinges in place horizontally or vertically—they can mount flush to the door, offset, or straight. They're the right size for tight spaces, narrow frames, and areas close to corners. The pin is permanently attached to the frame leaf and mates into the door leaf, allowing you to quickly lift your door off the hinge without removing the pin.

Hinges are reversible for right- and left-hand doors. Leaves and pins are made of the same material, unless noted. From the closed position, the range of motion is 270° for Style 6 and 360° for Styles 7 and 8.

Style 6 hinges hold a maximum door weight of 600 lbs., based on two hinges per door. Weld the round body directly to your door frame. ***Style 7*** and ***Style 8*** are not load rated. They have a small triangular welding surface that you weld to your door frame. *Style 8* hinges have a built-in grease fitting, which makes them easy to lubricate.

Surface-Mount Self-Closing Gravity Hinges

The weight of your door returns these hinges to a closed position without the help of springs. Hinges mount to the surface of flush-mounted doors, such as restroom doors. Pins are nonremovable. From the closed position, the range of motion is 180°. The screw holes are punched prior to plating to provide complete coverage for better corrosion resistance.

A pair includes two complete hinges (one for the top of the door and one for the bottom of the door) and one-way, tamper-resistant, #10 shoulder screws with barrel nuts.

★ Handing is determined from the push side of the door. If the door swings open to the right, use a right-hand hinge and vice versa.

Mortise-Mount Self-Closing Gravity Hinges

You won't have to deal with springs or spring adjustments. These hinges use the weight of your door to return to a closed position. Commonly found on restroom doors, hinges mount to 1¼″ thick partitions and fit their pins into recessed cutouts (mortises) in doors. Pins are removable. Hinges are reversible for right- and left-hand doors. From the closed position, the range of motion is 110°. Screw holes are countersunk prior to plating for better corrosion resistance. A pair is for one door and includes one top and one bottom hinge and mounting hardware.

Chrome-plated zinc hinges have a steel pin. ***Type 304 stainless steel*** hinges have a dull finish. 15345A31 and A32 have a steel pin. 15345A33 has a Type 304 stainless steel pin.

Quick-Disconnect Latch Hinges

Retract the pins in these hinges to disconnect your door without having to lift it. You can also use these hinges as a latch. Great for use on cabinet lids, electrical enclosure doors, and computer equipment housings. All hinges surface mount.

Styles 1 and 2— Hinges are spring loaded; pull the handle back to retract the pin; release the handle and the pin snaps back. Hinges and pins are the same material. Springs are stainless steel. A set includes one left-hand and one right-hand hinge. *Style 2* hinges have a groove to hold the handle in the retracted position, simplifying door removal and replacement. From the closed position, Style 2 has a 270° range of motion.

Styles 3 and 5— Just squeeze the handles together to retract the pin; release the handles and the pin snaps back. Reversible for right- and left-hand mounting. From the closed position, the range of motion is 270°. For Style 3, the hinges and pins are the same material. For Style 5, the pin is nylon.

Style 4— Remove the split ring to pull out the pin. Pins are Type 304 stainless steel. Reversible for right- and left-hand mounting. From the closed position, the range of motion is 180°.

Without Screw Holes— Weld in place or drill holes for screws

Reinforcing Pivot Hinges

If you have loose or damaged hinges, surface mount these pivots to the top edge of your door for reinforcement. They can be used on doors that swing in one direction and are flush with the frame or have up to a 1/8″ offset.

From the closed position, the range of motion is 270°. Screw holes are countersunk prior to plating to provide complete coverage for better corrosion resistance. Furnished with 1/4″ and #14 screws. Meet ANSI 156.1/156.7.

♠ Open Wd. of existing door hinge. ★ Handing is determined from push side of door. If door swings right, it's right-hand and vice versa.

Two-Way-Swinging Self-Closing Pivot Hinges

Surface mount these hinges at the top and bottom of your door or gate for smooth swinging in two directions. Hinges have ball bearings and are spring loaded, so they return to the closed position on their own. You can adjust the spring tension with the included tool.

Reversible for right- and left-hand doors. From the closed position, the range of motion is 270°. The screw holes are countersunk prior to plating to provide complete coverage for better corrosion resistance. Each hinge has a top and bottom pivot that fits into a cutout in the door. Furnished with mounting screws.

Finish	Screw Size	No. of Holes	Load Cap., lbs.✓		
Steel					
Prime Coat	#10, #12	6	75	1482A13	$93.09
Painted Black	#10, #12	6	75	1482A11	93.09

Brass					
Polished Chrome	#10, #12	6	75	1482A17	229.00

✓ Load capacity is based on one hinge per door with a max. door size of 36″ Wd. × 2 1/2″ Thick.

Glass Door Pivot Hinges

Support, hold, and pivot glass doors with these hinges. The hinge channels mount to the top and bottom of flush glass doors that are 3/16″ to 1/4″ thick. Hinges are made of steel and are reversible for right- and left-hand doors. From the closed position, the range of motion is at least 110°. A set is for one door and includes one top hinge, one bottom hinge, and pressure plates (unless noted) to protect the glass when tightening the mounting set screws.

Top/Bottom Mount— Require a 3/8″ Dia. × 3/8″ Dp. hole (unless noted) in case or frame to accommodate the pin and included bushing. Set screws are included.

Side Mount— Surface mount the pivot arm to the case or frame. Hinges require four #6 screws for mounting (not included). The screw holes are punched prior to plating for better corrosion resistance.

Overlay Door Pivot Hinge

Use this pivot hinge on doors up to 13/16″ thick that overlay their frames; it's a great solution because traditional surface-mount hinges won't work properly on overlay doors. Hinge surface mounts at the top and bottom of the door and the frame. The hinge and pin are Type 430 stainless steel with a dull finish. Reversible for right- and left-hand doors. From the closed position, the range of motion is 270°. The screw holes are countersunk. Mounting screws not included. A set is for one door and includes one top and one bottom hinge.

Lightweight Surface-Mount Spring Hinges

1 *For Self-Closing Door, with Screw Holes*

2 *For Self-Closing Door, with Screw Holes*

3 *For Self-Closing Door, with Screw Holes*

Spring Direction for Self-Closing Door

Spring Direction for Self-Opening Door

Depending on the hinge style you choose, your doors will return to the open or closed position thanks to the springs in these hinges. All hinges surface mount and have fixed spring tension. Reversible for right- and left-hand doors and lids. Hinges are unfinished, unless noted. From the closed position, the range of motion is 270°, unless noted. Mounting screws not included.

For Self-Closing Door— Hinges automatically return your lightweight door or lid to a closed position.

For Self-Opening Door— Hinges automatically return to an open position; great for cabinets and other light duty enclosures.

Lightweight Self-Closing Spring Hinges

4

5

6

7

8

Your lightweight doors and gates will automatically close behind you when you use these spring-loaded hinges. Reversible for right- and left-hand use. From the closed position, the range of motion is at least 170°. All except Style 6 include mounting screws.

Style 4— Made of steel. Spring tension is fixed.

Style 5— Made of steel. To adjust spring tension, use the included tool. Screw holes are countersunk prior to plating to provide complete coverage for better corrosion resistance.

Styles 6 and 7— Made of black glass-filled nylon with Type 302 stainless steel springs for corrosion resistance. Adjust spring tension with a screwdriver (not included). Not rated for temperature.

Style 8— Made of steel. The door leaf mounts to the surface of your door, and the frame leaf mounts into a recessed cutout (mortise) in your door's frame, providing a neat, flush-mounted appearance. To adjust spring tension, use the included tool. Screw holes are countersunk prior to plating to offer complete coverage for better corrosion resistance.

Mortise-Mount Self-Closing Spring Hinges

You won't leave doors open with these hinges—they're spring-loaded to automatically return your door to a closed position. To adjust the spring tension, simply use the included tool. Hinges mount into recessed cutouts (mortises) in your door's edge and frame, giving them a neat, flush-mounted appearance.

Reversible for right- and left-hand doors. From a closed position, the range of motion is 180°. Screw holes are countersunk prior to plating to provide complete coverage for better corrosion resistance. Furnished with mounting screws. UL listed for labeled fire doors, unless noted.

Template hinges have uniform screw holes placed in a standardized, half-moon pattern that's identical from manufacturer to manufacturer. *Type 304 stainless steel* hinges have steel springs with a corrosion resistant coating.

Nontemplate hinges have a screw hole pattern that differs among manufacturers.

Self-Closing Spring Hinges for Two-Way Swinging Doors

Whether you're coming or going, these spring-loaded hinges will automatically close your door. You can adjust the spring tension; simply use the included tool.

All hinges are reversible for right- and left-hand doors. They are made of steel, except for Style B, which are cast malleable iron to handle heavy wood or metal trucking doors. From a closed position, the range of motion is 180°. Hinges have a nontemplate design, which means the screw hole pattern differs among manufacturers. Screw holes are machined and countersunk (unless stated otherwise) prior to plating to provide complete coverage for better corrosion resistance. Furnished with mounting screws.

Style A— Door leaves mount into recessed cutouts (mortises) in your door's edge, giving them a neat, flush-mounted appearance.

Style B— Door leaves wrap around the door and partially mortise into the door's edge; a 15¾″ Lg.×1⅞″ Dp. cutout is required. Screw holes are not countersunk.

Style C— Door leaves wrap around your door's edge. Screw holes on the door leaf are not countersunk.

About Position, Lever-Lock, and Friction Hinges

Position, lever-lock, and friction hinges hold small doors, lids, and hatches in position, eliminating the need for latches, door holders, and other secondary support mechanisms. An example of a friction hinge is on the display of a laptop computer. You can position the display at any angle without secondary support.

All of these hinges withstand an amount of rotational force, or torque, to hold doors in position. The greater the torque rating of the hinge, the greater the force required to change the angle of the hinge. Doors mounted vertically, such as cabinet doors, have hinges that require very little torque to hold them in place because gravity does not affect their operation. However, doors mounted horizontally, such as hatches or lids, are pulled downward by gravity; their hinges must have a minimum torque rating to be effective.

Selecting a Hinge with the Proper Torque Rating

To select the correct hinge(s) for your door, you need to find the "torque force" of your door (the force needed to move the door). Once you know the torque force of your door, you can calculate the torque rating you should look for in a hinge.

1. Find the approximate "torque force" of your horizontally mounted door. Multiply the weight of your door (in pounds) by the distance (D) between the hinges and the door's center of gravity (in inches).

Example: Suppose your door weighs 2 lbs. and D=18″ (the door has an 18″ distance to its center of gravity). Multiply: 2×18=36. The door has a torque force of approximately 36 in.-lbs.

2. Divide the torque force of your door by the number of hinges you wish to use. The result is the torque rating you should exceed per hinge.

Example: Suppose you want to use two hinges on a door with a torque force of 36 in.-lbs. (see example above). Divide: 36/2=18. The torque rating for each hinge you choose should be greater than 18 in.-lbs.

Incremental-Angle Position Hinges

Inline (Steel)

Push the plastic button to adjust these hinges in set increments and release it to lock hinges in position—without the need for secondary mechanical support. All have rotary joint construction with an internal locking pin and hole locking mechanism. Hinges are incredibly strong and are great for use on machine guards and racks. Reversible for right- and left-hand doors. Mounting screws not included.

Inline—*Plastic* hinge has 1¼″ square arms without tapped holes and is not temperature rated. Color is black. *Steel* hinge has a black PTFE coating and ¾″ dia. round arms that each have two ¼″-20 tapped mounting holes. Holes are tapped prior to coating to provide complete coverage for better corrosion resistance.

Offset

Offset—Hinge is steel with a black PTFE coating. It has ¾″ dia. round arms that each have two ¼″-20 tapped mounting holes. Holes are tapped prior to coating to provide complete coverage for better corrosion resistance.

	O'all Ht.	Adjustable Increments	Torque, in.-lbs.

Set-Angle Position Hinges

A detent on these hinges holds doors open at a set angle without secondary mechanical support. You can further open the hinges to a maximum of 180°. Surface mount them on flush-mounted doors such as access doors, machine covers, panels, and lids. Reversible for right- and left-hand doors.

Made of black acetal plastic with Type 302 stainless steel internal springs and a nonremovable steel pin. Temperature range is –40° to +180°F. Hinges require four #10 mounting screws (not included). Furnished with a snap-on, black acetal plastic cover for concealing the mounting screws.

★ Load capacity based on one hinge per door.

Lever-Lock Hinge

Simply tighten the lever on this hinge to lock it in any position from 0° to 180°. It keeps lids, panels, and doors in a fixed position without the need for secondary mechanical support. For surface mounting.

Hinge is die cast zinc with a black powder-coated finish. It has a black nylon handle and a nonremovable Type 316 stainless steel pin. Mounting screws not included.

Leaf Ht.	Open Wd.	Leaf Thick.	Pin Dia.	Screw Size	No. of Holes		
1 37/64″	2 29/32″	5/16″	5/16″	M8	4	**1604A41**	$17.31

Friction Hinges

Use these hinges to hold lids, panels, and doors in a position you choose without secondary mechanical support. Just apply force to change the angle of the hinge. All provide constant resistance throughout their range of motion. For surface mounting. Reversible for right- and left-hand doors. All have four mounting holes; screws not included.

Aluminum with Black Painted Finish—Have a nonremovable steel pin.

Black Glass-Filled Nylon—Hinges have a nonremovable steel pin. Temperature range is 32° to 140°F.

Type 304 Stainless Steel—All have a nonremovable Type 303 stainless steel pin.

Adjustable-Friction Hinges

Hold your doors closed, open to 180°, or open to any angle in-between without secondary mechanical support—just tighten or loosen the adjustment screw to change the hinge resistance. Hinges move easily when you apply force and are load rated to handle heavy doors. Surface mount hinges on flush-mounted doors. Reversible for right- and left-hand doors.

Made of acetal plastic with a nonremovable polycarbonate pin and Type 303 stainless steel adjustment screw and nut. Temp. range is 20° to 150°F. All have four mounting holes; screws not included.

360° Friction Hinges

The design of these hinges allows an unlimited 360° range of motion while providing constant resistance. Hinges hold lids, panels, and doors at any angle without secondary mechanical support, yet they move when you apply force. For surface mounting. Made of die cast zinc and steel (unless noted) with a black epoxy finish. Pin is steel and nonremovable. Mounting screws not included.

♣ Hinge is steel. ▲ Hinge is reversible.

Surface-Mount Cabinet Hinges

Surface mount these hinges to your cabinet's door and frame. Hinges are reversible for right- and left-hand doors. From the closed position, the range of motion is 180°, except for Styles 7, 12, and 13, which have a 270° range of motion. Leaf thick. is 1/16", unless stated otherwise. Pins are 11/64" dia. and nonremovable, unless noted. Hinges, pins, and springs (where applicable) are made of the same material. Furnished with mounting screws, unless noted.

Flush Style—For flush-mounted doors that are at least 3/4" thick.

Inset Style—For use on inset doors. Hinges have a built-in spring that pulls the door closed when it's open less than 35° and keeps the door closed without the need for a catch or latch.

Overlay Style—For use on doors that overlay their frames. *Style 9* have a built-in spring that pulls the door closed when it's open less than 35° and keeps the door closed without the need for a catch or latch. *Style 13* has a tapered pin for tamper resistance; it's for use on large doors.

Invisible Mortise-Mount Cabinet Hinges

You'll think these hinges disappeared—when your door is closed they're completely hidden from both sides to prevent tampering and to provide a neat appearance. Both leaves of these hinges mount into recessed cutouts (mortises) on your door's edge and frame, so they don't take up space in the cabinet itself. All hinges are reversible for right- and left-hand doors. From the closed position, the range of motion is 180°.

Steel Hinges with Zinc Leaves—Have nonremovable steel pins. Furnished with mounting screws.

Brass Hinges—Require two wood screws (not included, see pages 3014-3021) for mounting and adjusting tension.

Router Guides—Made of wood, these router guide templates make it easy to install the steel hinges (1612A) below.

Concealed Half-Mortise Mount Cabinet Hinges CAD

Wall Mount

Edge Mount

Full Overlay ***Half Overlay***

Completely hidden from the outside when the door is closed, these hinges (also known as European hinges) have a door leaf that mounts into a recessed cutout (mortise) on the inside of your cabinet doors. The door leaf requires a 1 3/8" (35 mm) dia. mortise—we recommend you use a wood boring bit (see 3216A29 on page 2463).

Reversible for right- and left-hand doors. Hinges, pins, and springs (where applicable) are made of the same material, except for zinc hinges, which have a steel pin and spring. Pins are nonremovable. Screw holes are countersunk, unless stated otherwise. Steel and zinc hinges have screw holes that are countersunk prior to plating for better corrosion resistance. All are furnished with mounting screws.

Wall Mount—*Steel* hinges have a quick-release clip for easy door removal. *Type 304 stainless steel* hinges screw into a Type 304 stainless steel mounting plate, which does not have countersunk holes.

Hold-closed models have a built-in spring that pulls the door closed when it's open less than 10° and keeps the door closed without the need for a catch or latch.

Adjustable Surface-Mount Cabinet Hinge CAD

Need a hinge to accommodate warped doors and frames? Not a problem. This hinge has a pin adjustment screw that allows approximately 1/16" vertical adjustment and screw holes that allow 1/32" horizontal adjustment. This design makes installation and alignment easy. Hinge is for surface mounting and is reversible for right- and left-hand doors.

Made of die cast zinc with a black finish. The screw holes are countersunk prior to finishing to provide complete coverage for better corrosion resistance. Hinge has a 15/64" leaf thickness and a nonremovable, 15/64" dia. nickel-plated brass pin. From the closed position, the range of motion is 180°. The four mounting holes accept #10 screws (not included).

#4, #5, and #6

#7, #8, and #9

Your wood, aluminum, and metal sectional doors will move smoothly on these hinges. Made of steel with a hot-dipped galvanized finish, they're commonly used for garage doors.

All hinges are for surface mounting and are reversible for right- and left-hand doors. The hinges and pins (which are nonremovable) are made of the same material. Leaves are 0.113" thick. Range of motion is from the closed position. Mounting screws not included.

Heavy Duty Strap Hinges for Narrow Frames CAD

A narrow frame leaf makes these hinges great for trailers, containers, and other large doors that have frames with a limited mounting area. All are for surface mounting on flush-mounted doors and are reversible for right- and left-hand doors. Hinges have a removable steel pin and a nylon bearing. From the closed position, the range of motion is 270°.

Hinges have a 1 3/8" offset so the strap can clear a door seal. Weld the frame leaf on the frame and bolt the door leaf on the door. Frame leaf is steel with a galvanized finish. Screw holes are punched prior to finishing (where applicable) to provide complete coverage for better corrosion resistance. Mounting screws not included.

Strap Hinges

Surface mount these hinges on flush-mounted gates and doors. They're reversible for right- and left-hand doors. From the closed position, hinges have a 270° range of motion, unless noted. Pins are nonremovable, unless noted. The screw holes are made prior to finishing to provide complete coverage for better corrosion resistance. Screw holes are countersunk, except for hinges 1364A11, 1364A12, and 13125A51, which have punched holes. Mounting screws not included, unless noted.

Styles 12 and ***13*** are recommended for service doors, refrigerators, freezers, and industrial enclosures. *Style 12* hinges have nylon bearings for smooth operation. *Style 13* hinge has a nylon bushing for smooth operation.

Style 14 hinge is spring-loaded; it has adjustable tension for use on self-closing gates.

♥ Pin is aluminum. ● From the closed position, the range of motion is 180°. ♠ From the closed position, the range of motion is 360°.
♣ From the closed position, the range of motion is 260°. ★ Pin is removable. ♦ Mounting screws are included.

Layered Strap Hinges

Layers of metal provide extra strength and support. All hinges are for surface mounting on flush-mounted doors. They're reversible for right- and left-hand doors. From the closed position, hinges have a 180° range of motion, unless noted. Screw holes are made prior to finishing to provide complete coverage for better corrosion resistance. Mounting screws not included.

Steel hinges have a nonremovable steel pin. ***Type 304 stainless steel hinge*** has a nonremovable Type 304 stainless steel pin.

Load-Rated Strap Hinges

1

2

3

4

Strap hinges with a difference—these have a load rating. Hinges are for surface mounting and are reversible for right- and left-hand doors. Screw holes are countersunk prior to finishing to provide complete coverage for better corrosion resistance. Mounting screws not included.

Style 1—Excellent for gates and doors. Hinges have a nonremovable brass pin. For flush-mounted doors.

Styles 2-4—Recommended for service doors, refrigerators, freezers, and industrial enclosures. *Style 2* have nylon washers for smooth operation and a removable steel pin. *Styles 3* and *4* have a removable Type 305 stainless steel pin.

♦ Load capacity is based on two hinges per door, unless noted. ♠ From the closed position. ● Load capacity is based on one hinge per door.

Load-Rated Lift-Off Strap Hinges

A self-lubricating nylon cam in these load-rated hinges provides smooth opening and closing as well as constant pressure for a positive seal—ideal for refrigerators, freezers, and doors on large enclosures. The lift-off design means that you can quickly lift your door off these hinges without disassembling the hinges.

Hinges are made of zinc with a polished-chrome finish. They're for surface mounting and are reversible for right- and left-hand doors. From the closed position, hinges have a 180° range of motion. A hold-open function holds your door open at 140° and automatically closes the door if it's opened less than 90°. Screw holes are countersunk prior to finishing to provide complete coverage for better corrosion resistance. Mounting screws not included.

♣ Load capacity is based on two hinges per door with a maximum door width of 42″.

Load-Rated Heavy Duty Strap Hinges with Bearings

5

6

With a ball-bearing design, large diameter pins, and door leaves that are thicker and longer than most, these hinges are built for heavy manual doors. Style 6 also works with power-operated doors. All hinges are for surface mounting on flush-mounted doors (Style 5 can also mount on the face of the wall to allow open doors to clear the doorway).

Hinges are made of steel with a tan enamel finish. All have a removable steel pin and are reversible for right- and left-hand doors. From the closed position, hinges have a 180° range of motion. Screw holes are punched prior to finishing to provide complete coverage for better corrosion resistance. Mounting screws not included.

	Door Leaf (A)	Door Leaf (B)	Frame Leaf (C)	Frame Leaf (D)	Leaf Thick.	Pin Dia.	Screw Size	No. of Holes	Load Capacity■ lbs.	Load Capacity■ Hinges per Door	Load Capacity■ Max. Door Size

■ Load capacity is based on the number of hinges listed per door with the maximum door size listed.

Self-Opening Lid Supports

A spring assists these supports in opening and holding open lids and doors on cabinets and tool chests. Just flip up the lid or door and the support does the rest. When lids and doors are closed, the spring keeps them in position. Reversible for right- and left-hand doors. Supports are made of Type 304 stainless steel with a dull finish. Spring is steel. Require five #6 mounting screws (not included).

Note: These supports are designed to be used in pairs. Load capacity shown is for two lid supports.

Min. Opening Depth (A)	Min. Opening Wd. (B)	Max. Angle (C)	Load Cap., lbs.	Each	
2.204″	10.75″	90°	6.6	**11615A13**	$38.50
2.204″	15″	90°	5.5	**11615A14**	53.00
2.204″	14.75″	110°	5.5	**11615A15**	51.00

Self-Opening Combination Hinges and Lid Supports

No separate hinges, catches, or latches required—these supports act as a hinge and a lid support. A spring assists the supports in opening lids and doors and then holds them open at either 75° or 90°. When lids and doors are closed, the spring keeps them in position.

Choose either right- or left-hand mounting. Handing is determined as you look into your cabinet or tool box; the right side requires a right-hand support, the left side requires a left-hand support. Made of white epoxy-coated steel with a nickel-plated steel spring. Require five #8 mounting screws (not included). Load capacity is 5½ lbs. for each lid support.

Min. Opening Depth (A)	Min. Swing Width (B)	Opening Positions (C)	Right Hand	Left Hand	
1.744″	5.313″	75°, 90°	**14785A53**	**14785A51**	$14.37

Lid Supports

All of these supports are free-moving; they open and close at the speed you raise and lower them. Use supports to hold lids and doors open for easy access to cabinets and tool chests. You'll need a latch (not included) to secure them in the closed position. Supports are made of Type 304 stainless steel with a dull finish. Mounting screws not included. *Note:* The load capacity shown is for one lid support.

Style 1— Designed exclusively for flip-down doors, these supports are ideal when a hold-open feature is not required. Reversible for right- and left-hand use.

Style 2— Supports have a hold-open mechanism—pull out the support arm to engage the mechanism and hold the arm in the fully open position; slightly raise the support arm to release the mechanism and retract the support arm. Reversible for right- and left-hand use.

Style 3— Supports have at least four hold-open positions up to 90°. Choose either right- or left-hand mounting. Handing is determined as you look into your cabinet or tool box; the right side requires a right-hand support, the left side requires a left-hand support.

	Min. Opening Depth (A)	Min. Opening Width (B)	Max. Angle (C)	Screw Size	No. of Holes	Load Cap., lbs.	Handing

Speed Control Lid Supports

Prevent lids and doors from slamming down. Supports also have a hold-open and/or a hold-closed feature to keep your door in place, eliminating the need for latches. Furnished with mounting screws.

Handed lid supports are made of nickel-plated zinc alloy and steel. An adjustment screw on these supports controls the opening/closing speed to accommodate a variety of door sizes and weights. Choose either right- or left-hand mounting. Handing is determined as you look into your cabinet or tool box; the right side requires a right-hand support, the left side requires a left-hand support.

Reversible lid supports are made of nickel-plated steel with white plastic pivot covers. Reversible for right- and left-hand use.

Top Lid Supports and ***Flip-Up Lid Supports—*** For use with overlay doors that have butt hinges, piano hinges, or concealed hinges. 1227A73 also works with inset doors. Max. opening angles are adjustable within the ranges shown.

Flip-Down Lid Supports— For doors with butt hinges, piano hinges, or drop-leaf hinges.

■ Torque = Door Height × ½ × Door Weight. ▲ Can be used as either a top lid support or a flip-up lid support.

Adjustable-Friction Lid Supports

Hold open your windows, lids, and doors at any position up to the maximum angle of these supports. Simply open to the desired position and release. You can turn the adjustment screw to control the holding force to accommodate a variety of door sizes and weights. Choose either right- or left-hand mounting. Handing is determined as you look into your cabinet or tool box; the right side requires a right-hand support, the left side requires a left-hand support. Made of brass-plated steel. Furnished with mounting screws.

Min. Opening Depth (A)	Min. Opening Width (B)	Max. Angle (C)	Handing

♣ These braces are designed to be used in pairs. Load capacity is for two braces.

Folding-Table Leg Braces

One side mounts to your table and the other mounts to a leg. Pull out the leg to lock the brace; press the release to fold the leg closed.

1 Made of black acetal plastic, this brace press-fits onto 0.78″ ID tube legs up to 18″ long. Requires three #5 mounting screws (not included). Not load rated.

1173A21 ..... **Each** $5.05

2 This bronze-plated steel brace mounts to 1½″ square legs. It requires six #8 mounting screws (not included). Load capacity is 75 lbs. per brace.

18095A51 ..... **Each** $5.72

3&4 The braces in these sets are made of zinc-plated steel. A set includes one right-hand and one left-hand brace plus mounting screws. Load capacity is per set.

	Extended Lg.	Load Cap., lbs.	Wd.		Set
3	13½″	75	⅝″	**1571A11**	$26.31
4	16⅝″	200	1¼″	**1570A11**	57.96

Steel Side-Mount Precision Drawer Slides CAD

The ball bearings and raceways (where ball bearings travel) are manufactured to tight tolerances, ensuring smooth drawer movement. Slides are made from zinc-plated, cold-rolled steel. They have positive stop, so the drawer won't accidentally disengage from the slide. They also have a hold-in detent that firmly holds the drawer in the closed position. Mount these slides in desks, cabinets, and tool chests. All slides include mounting screws.

5&6 ***Extension Slides with Lift-Out Release—*** The lift-out release feature allows you to simply push in the clip and lift the drawer up and out of the slide.

Style 5 slides are ¾ extension, so the drawer will pull out ¾ the closed length of the slide. Load rating is based on 50,000 cycles of a 12″ wide drawer.

Style 6 slides are full extension, so the drawer will pull out the full closed length of the slide. Load rating is based on 50,000 cycles of a 16″ wide drawer.

7&8 ***Full-Extension Slides with Lever Release—*** Drawer will pull out the full closed length of the slide, except with the 10″ long slide, which has a slightly shorter travel length. Slides have a lever release; just push the lever to release the drawer from the slide. An adjustment lever allows you to vertically adjust the position of the drawer front up to 3/16″. Not for use on drawers that are wider than their length. Load rating is based on 50,000 cycles of a 16″ wide drawer.

Style 8 slides have a hold-open detent to hold the drawer in place when opened—just push firmly on the drawer to close.

9 ***Full-Extension Slides with Lift-Out Release—*** Slides have overtravel (except 22″ long slide), so the drawer will pull out farther than the closed length for easier access to the back of the drawer. The lift-out release feature allows you to simply push in the clip and lift the drawer up and out of the slide. An adjustment lever allows you to vertically adjust the position of the drawer front up to 3/16″. Load rating is based on 50,000 cycles of a 27″ wide drawer.

10 ***Full-Extension Slides without Release—*** Drawer will pull out the full closed length of the slide. Once installed, the drawer cannot be removed without disassembling the slides. Mount on storage drawers in utility and industrial trucks. Load rating is based on 50,000 cycles of a 16″ wide drawer.

Type 304 Stainless Steel Side-Mount Precision Drawer Slides

Made entirely from Type 304 stainless steel, these corrosion-resistant slides are often used on file cabinets and medical carts as well as in laboratories and damp environments. All have a dull finish. The ball bearings and raceways (where the ball bearings travel) are manufactured to tight tolerances to ensure smooth, quiet operation. Retainers keep ball bearings in place. Slides have a positive stop, so the drawer won't accidentally disengage from the slide (except *Style 1* slides, which have a friction stop that gradually stops the slide in the open position).

Slides come with installation instructions. Mounting screws not included. Load rating is based on 50,000 cycles of a 24″ wide drawer.

1&2 ***3/4-Extension Slides—*** Drawer will pull out approximately 3/4 the closed length of the slide.

Style 1 slides have friction release; firmly pull the drawer straight out of the slides. Each pair of slides requires 26 #8 pan head screws for installation, except for the 12″-16″ long slides, which require 22 screws.

Style 2 slides do not have a release. Once installed, the drawer cannot be removed without disassembling the slides. Each pair of slides requires 32 #8 pan head screws for installation, except for the 12″ long slides, which require 28 screws.

3&4 ***Full-Extension Slides without Release—*** Slides have overtravel, so you can pull the drawer out farther than the closed length for easier access to the back of the drawer. Once installed, the drawer cannot be removed without disassembling the slides.

Style 3 slides require 22 #8 pan head screws per pair for installation, except for the 12″-16″ long slides, which require 20 screws.

Style 4 slides are recommended for heavily loaded drawers. Each pair of slides requires 40 #8 pan head screws for installation, except for the 12″-16″ long slides, which require 32 screws.

5 ***Full-Extension Slides with Button Release—*** These slides have overtravel, so you can pull the drawer out farther than the closed length for easier access to the back of the drawer. To remove the drawer from the slides, simply push the release button. Each pair of slides requires 22 #8 pan head screws for installation, except for the 12″-16″ long slides, which require 20 screws.

Steel Side-Mount Self-Closing Drawer Slides

When the drawer approaches the closed position, these slides automatically pull the drawer closed and hold it firmly in place. Ideal for use on desks and cabinets. Mounting screws are included.

6 ***3/4-Extension Side/Rear-Mount Drawer Slides with Lift-Out Release—*** Drawer will pull out 3/4 the closed length of the slide. The lift-out release feature allows you to lift the drawer up and out of the slides. You can also mount the slides to the rear wall of a cabinet instead of the side wall (requires two brackets, sold individually below). Slides are steel with a white epoxy finish. Rollers are plastic for quiet operation. Load rating is based on 50,000 drawer cycles.

7 ***Full-Extension Side-Mount Drawer Slides with Lever Release—*** Drawer will pull out the full closed length of the slide. To remove the drawer from the slides, simply push the lever. Slides are made of zinc-plated steel. They have ball bearings for smooth operation and retainers to keep ball bearings in place. Load rating is based on 50,000 cycles of a 16″ wide drawer.

Side-Mount Lock-Open Precision Drawer Slides

Use the levers or buttons on these slides to lock them in the open position, firmly holding your drawer in place for easy access to contents. To release the lock, simply push the levers or buttons on both sides. Continue applying pressure to the levers or buttons to release the drawer from the slides. The ball bearings and raceways (where ball bearings travel) are manufactured to tight tolerances to ensure smooth, quiet operation. Slides have retainers to keep ball bearings in place.

Full-extension slides have overtravel, so you can pull the drawer out farther than the closed length for easier access to the back of the drawer.

Steel

You can mount these slides to vertical rails in electronics racks and enclosures with the rail-mounting brackets (sold separately, unless noted). Slides have a zinc-plated finish. Ball bearings are steel. Mounting screws are included. Load rating is based on 10,000 cycles of a 16″ wide drawer (unless noted).

Optional Rail-Mounting Brackets for Steel Slides

Use these brackets to mount slides on vertical rails (such as those found in electronics racks). The brackets fit over the slide and attach to the rail. One set of brackets includes two front brackets, two back brackets, bar nuts, and mounting screws—everything you need to mount one pair of slides.

		Set
For Style 1 Slides	63835A62	$22.34
For Style 3 Slides	63835A64	22.34

Aluminum Side-Mount Precision Drawer Slides

Made of aluminum, these slides are ideal for applications requiring light weight and high strength. They have ball bearings and raceways (where ball bearings travel) that are manufactured to tight tolerances to ensure smooth, quiet operation. Slides have full extension, so you can pull the drawer out the full closed length of the slide. Mounting screws not included. Load rating is based on 10,000 drawer cycles.

Style 6— Made of aircraft-grade anodized aluminum, these slides have Type 440 stainless steel ball bearings and anodized aluminum raceways. They have a lever release; just push the lever to release the drawer from the slide. Require up to 19 #8 flat head screws.

Style 7— Built for extreme loads, these slides have anodized aluminum rails and steel wheels with a double row of steel ball bearings that travel in steel raceways. To release the drawer from the slides, remove the end stop and slide drawer out of the track. Slides require up to 40 1/4″ flat head cap screws.

Base-Mount Precision Drawer Slides

Because these slides mount to the base of your drawer or shelf, they're ideal when you don't have enough clearance for side-mount slides. Slides have ball bearings and raceways (where ball bearings travel) that are manufactured to tight tolerances to ensure smooth movement. Retainers keep ball bearings in place. Load rating is based on a drawer with a service life of 50,000 cycles.

3/4-Extension Slides— Mount one slide to the underside of the drawer, along the drawer's centerline. Drawer will pull out 3/4 the closed length of the slide. Slides have a friction stop that gradually stops the slides in the open position. To release the drawer, firmly pull the drawer straight out of the slides. Made entirely of Type 304 stainless steel with a dull finish. Each slide requires up to seven #8 pan head mounting screws (not included).

Full-Extension Slides— Slides have overtravel, so you can pull the drawer out farther than the closed length for easier access to the back of the drawer. Slides can also be mounted directly to the floor. Once installed, the drawer cannot be removed without disassembling the slides. *Steel* slides have a zinc-plated finish, steel ball bearings, steel raceways, and a hold-in detent that holds drawer in the closed position. Mounting screws are included. *Type 304 stainless steel* slides have a dull finish, steel ball bearings, and Type 304 stainless steel raceways. A cap at the end stops travel. Each slide requires up to 40 #8 mounting screws (not included).

Steel High-Capacity Precision Drawer Slides

Mount these high-capacity slides onto storage drawers for heavy tools and equipment as well as onto access drawers for batteries and generators. Made of steel, slides have steel ball bearings and steel raceways (where ball bearings travel) that are manufactured to tight tolerances to ensure smooth movement. Retainers keep ball bearings in place. All slides are full extension, so the drawer will pull out the full closed length of the slide. Once installed, the drawer cannot be removed without disassembling the slides. Require up to 34 mounting screws (not included); use 1/4″ hex head cap screws with max. head size of 1/2″ Wd.×0.19″ Ht. for clearance. Load rating is based on a drawer with a service life of 10,000 cycles.

Dual-Mount Slides— Side mount or base mount these slides.

Side-Mount Slides with Lock-Open/Closed— For side mounting. Fully open or close these slides and they lock in position. To release the lock, push the lever on the right-hand slide.

■ When dual-mount slides are base mounted in nonvehicular applications, the load capacity is 1/3 of the listed capacity. Dual-mount slides are not for base mounting in vehicular applications.

Steel Under-the-Counter Mount Precision Drawer Slides

Install these slides directly to the underside of countertops, desktops, shelves, and tables. Made from zinc-plated steel, slides are 3/4 extension, so the drawer pulls out 3/4 the closed length of the slide. Slides have steel ball bearings and steel raceways (where ball bearings travel) that are manufactured to tight tolerances to ensure smooth movement. Retainers keep ball bearings in place. All have a lever release (push the lever to release the drawer from the slide) and hold-in and hold-open detents that firmly hold the drawer in the closed and open positions. Slides include mounting screws and adjustable-height mounting brackets that are reversible for inward and outward mounting. Load rating is based on a 16″ wide drawer with a service life of 50,000 cycles.

Brackets

Also known as angle brackets and mending plates, these brackets strengthen and support corners and joints. The angle brackets (Styles 1-18) have 90° corners. Mounting screws are not included, unless noted. ***Style 9*** and ***Style 10*** have a 1⅛″ offset, except 1030A11, which has a ⅞″ offset.

★ Furnished with mounting screws. ● Includes one mounting slot. ▲ Includes two mounting slots. ♦ Refers to common nail size.
♣ Prices are approximately 25% lower when you buy in quantities of 50 or more.

Heavy Duty Steel Brackets

Left-Hand Side Bracket — *Right-Hand Corner Bracket* — *2×4 Bracket*

You'll find these steel brackets on truck racks, removable gates, knockdown crates, and fence sections. Mount with 5/16″ dia. screws (not included).

Side and ***Corner Brackets***—Each set has a top and bottom piece. Each piece has three mounting holes. All have a black zinc finish. Side brackets are 0.156″ thick. Corner brackets are 0.172″ thick.

2×4 Brackets—Mount on standard wood 2×4s. Brackets are 0.125″ thick and have five mounting holes. *Plain finish* bracket can also be welded.

	Lg. × Ht.	Left Hand Set		Right Hand Set

2×4 Brackets	5 1/2″ × 3″ × 1 5/8″	18725A61	$5.50	18725A62	$5.50

Heavy Duty Stainless Steel Brackets

Made of Type 304 stainless steel, these thick brackets stand up to demanding applications and wet and corrosive environments. All are also compatible with 1 5/8″ wide strut channel. Use strut channel nuts (not included, see page 1551) to connect strut channels to each other.

Style 1 and ***Style 2*** have a 90° corner.

	Length (A1)	Length (A2)	Wd. (B)	Thick.	Mounting Hole Dia.	No. of Holes

Heavy Duty Galvanized Steel Brackets

Galvanized steel construction makes these thick brackets a good choice for wet and corrosive environments. They're often used to construct marine docks. Mounting screws not included.

Styles 7, 8, and ***9*** have a 90° corner.

Use a ***Style 11*** bracket with a ***Style 12*** bracket to join marine dock sections or corners; secure with a bolt or pin.

Panel Hanging Brackets

Perfect for mounting panels and partitions, these brackets are commonly found in washrooms.

Die cast zinc brackets are chrome-plated with a polished finish. ***Stainless steel*** brackets have a dull finish. ***Aluminum*** brackets have a white powder-coated finish.

Styles 16-19 come with mounting screws and one-way security screws. *Style 19* brackets consist of two pieces.

Style 20 require five 5/16″ dia. mounting screws (not included), unless noted.

Magnet-Mount Tool Holders

No need for a drill and mounting screws. All of these holders have a nonmarring magnet that you can easily mount and reposition on steel walls, cabinets, and desks. Holders are for gripping round objects.

Style 5 has an adjustable hook-and-loop band to hold cylindrical containers. Base is made of polypropylene. Color is red. Temperature range is 0° to 120° F.

Styles 6-8 have a spring-action steel clip mounted to a corrosion-resistant steel base.

Multiposition Tool Holder

Just loosen and tighten the wing nuts to adjust the angle of this tool holder. The mounting plate swivels and also locks in position with a wing nut. Holder is made of Type 304 stainless steel with a polished finish; wing nuts are plastic. Holder has a protective vinyl tip. You can remove the holder from the mounting plate, which has three holes for surface mounting. Furnished with mounting screws.

For Tool Dia.	O'all Lg.	OD		
1⅝″	11″	1 29/32″	4505T31	$38.07

Tool Holders

Put mops, brooms, brushes, and other tools in their place with these holders. Mounting screws included, unless noted.

Styles 9-14 have spring-action to securely hold tools.

Styles 11-13 are nonconductive, nonmagnetic, and noncorrosive.

Style 15 and ***Style 16*** use the weight of your stored tool to produce a secure grip. Push your tool up and out to remove. Style 16 consists of a hook and a mounting plate.

Load-Rated Vinyl Slatwall

Want an alternative to pegboard? The grooves in these vinyl slatwall panels accept the pegboard hooks on page 3007 (except screw-mount style). Load rating is 130 lbs. when the panel is screwed into a stud and the load is 3″ from the panel. Center-to-center distance between grooves is 1″. You can cut panels and optional trim (sold separately) to size with a circular saw. Panels require mounting screws that are at least 2″ long with a maximum head diameter of 0.290″ (screws not included).

Slide ***optional trim*** over the panel ends for a finished look. Trim comes in three 4-ft. lengths per package.

Pegboard hook is not included.

Revolving Pocket Tool Holder

Give this holder a spin to easily locate your frequently used tools. Holder has 18 pockets (six pockets are 1″ Dia.×3″ Dp., six pockets are 1″ Dia.×3½″ Dp., and six pockets are 1½″ Dia.×4″ Dp.) and 12 S-hooks that mount on the pockets for extra tool storage. Includes a tube clamp for installation on tubes up to 2⅜″ dia. Pockets are blue PVC; mounting pole is steel with a polished chrome finish.

For Tool Dia. Range	Overall Size Dia.	Overall Size Ht.		
1″-1½″	8¾″	9⅞″	1921A23	$38.51

Combination Dry-Erase Pegboards

You'll have a framed brown hardboard pegboard and a white dry-erase board. Pegboards are ¼″ thick. Holes are 9/32″ dia. on 1″ centers. Mount with the included hardware for either a left- or right-handed writing surface. Dry-erase board portion is 12″ wide by the height of board and has an 11⅞″ long marker tray. ***Aluminum frames*** are unfinished. ***Oak frames*** have a lacquered finish.

Load-Rated Metal Pegboards and Pegboard Bars

Pegboard with Tread Plate Finish

Pegboard Bar (Pegboard hook is not included.)

A step above hardboard and plastic pegboards, these unframed metal boards and bars handle heavy loads. Plus, they won't chip or crack. Holes are 9/32″ dia. on 1″ centers. Boards and bars project ¾″ from the wall, except ***aluminum bars***, which project ½″. All require ¼″ dia. mounting screws (not included, unless noted). ***Stainless steel*** resists corrosion. ***Aluminum*** is lighter in weight than steel and stainless steel.

Note: Load rating is based on a load that is evenly distributed across the entire board or bar.

Pegboards

Framed Pegboard

Pegboard holes are on 1″ centers. Mounting hardware is not included. Pegboards with ***3/16″ dia. holes*** are ⅛″ thick; pegboards with ***9/32″ dia. holes*** are ¼″ thick.

Unframed Pegboards— The *polypropylene* boards offer excellent abrasion and chemical resistance. Temperature range is 30° to 180° F.

Framed Pegboards— Sturdy frame prevents warping and has built-in hangers for mounting. *Aluminum frame* is unfinished. *Oak frame* has a lacquered finish.

Mounting Hardware Package— Includes six #8×1¼″ long screws and six plastic spacers. Spacers are ⅜″ Dia.×½″ Thick. and should be placed behind pegboard to provide clearance between wall and pegboard.

Pegboard Containers

Bin

Basket with Slotted Card Holder

Jar

Great for storing large items or numerous smaller items. Containers fit 3/16″ and 9/32″ dia. pegboard holes that are on 1″ centers.

Bins are made of polypropylene and come with a zinc-plated steel clip that screws into the pegboard for secure mounting. Screws are included. **To Order:** Please specify color: blue, red, or yellow.

Baskets are made of epoxy-coated or chrome-plated steel wire. Load rated up to 29 lbs. **To Order:** For epoxy-coated baskets, please specify color: black, blue, green, red, or yellow.

Jar is clear PVC with a dark blue polypropylene lid.

Pegboard Hooks

Light Wire—Hooks work with 3/16″ and 9/32″ dia. pegboard holes, giving you more flexibility but a looser fit for lighter loads.

Heavy Wire—Hooks fit tightly into 9/32″ dia. pegboard holes, securely holding heavier loads.

Styles 4 and *5* have a lock nub (except where noted). *Style 11* are two-piece hooks; pull up on the arm to "unlock" it from the mounting base and swivel it to fold flat against the pegboard when not in use. *Style 14* mounts into the board with screws. 18535A59 is furnished with screws; 8670A63 requires two #10 screws (not included). *Style 15* are ideal for shovels and rakes.

Light Wire—For 3/16″ and 9/32″ Dia. Pegboard Holes

Pegboard Hook Holder and End Caps

Hook holder snaps into pegboard to keep hooks (not included) from falling out. Use with pegboards that have 3/16″ and 9/32″ dia. holes on 1″ centers. Made of black flexible plastic.

End caps slide onto the end of hooks (not included) to create a nonmarring tip. Made of red vinyl.

	Pkg. Qty.		Pkg.

Pegboard Magnetic Holders

An alternative to traditional pegboard hooks, these holders have a magnet in their center to hold your tools. Just screw into 1/8″ or 1/4″ dia. pegboard holes with the included threaded machine screws. Holders install from the front, so there's no need to remove the board to install or rearrange them. Once installed, the holders are almost impossible to shake loose or pull out of hardboard pegboard. Magnet is surrounded by a black rubber housing.

Stay-Put Pegboard Hooks

Once installed, these hooks are almost impossible to shake loose or pull out of hardboard pegboard. Hooks install from the front, so there's no need to remove the board to install or rearrange them. Secure in 3/16″ or 9/32″ dia. pegboard holes on 1″ centers with the included threaded machine screws. You can insert and remove the screws without damaging the pegboard. Made of zinc-plated steel, unless noted.

♦ Based on installation in sheetrock (drywall) except for Style 10, which is based on installation in a hollow core wood door.

Load-Rated Strap Hooks

Hang up odd-shaped items that most hooks can't handle. Simply adjust the length of the strap and wrap it around your item. Then, hook the steel end fitting onto the mounting plate for a secure hold. Strap is black nylon. Hook is plain steel. Mounting plate is 3 3/16″ Ht. × 1 1/2″ Wd. Mounting screws not included.

Strap Lg.	Load Cap., lbs.	Screw Size	No. of Holes		
32″	50	#8	2	1802A11	$6.80
48″	50	#8	2	1802A12	7.40

Over-the-Door Hooks

Place these hooks over the top of your door.

Style 13— Made of dull Type 304 stainless steel.

Styles 14 and ***15—*** Made of chrome-plated zinc with a polished finish.

Style 16— Hooks are steel with a black powder-coated finish. Distance between hooks is 3 1/4″. Distance between mounting hooks is 15″. Overall width is 20″.

Style 17— Hook is zinc-plated steel with a red vinyl coating for scratch protection. Temp. range is –20° to +120° F. Package quantity is 10.

Adhesive-Backed Hooks and Hangers

Adhesive on these hooks and hangers makes hanging items easy. Not temperature rated.

White Cloth Hanger with Zinc-Plated Steel Hook— Use water to moisten the adhesive on the cloth back of these hangers. You can use a single hook as a wall hook, or use two hooks as an interlocking pair: one hook mounts on the wall and one hook mounts on the item you're hanging.

Clear Plastic Hanger— Designed to attach to the top of an item. Just peel off the backing and affix the hanger to a flat-surfaced item. Once adhesive has dried, hang item from a hook, nail, or screw.

Aluminum Hanger— Has a 1/32″ offset for space between the item and hanging surface that hides the hanger from view. Peel off the backing and affix the hanger to a flat-surfaced item. For best holding power, allow adhesive to dry for two hours. Once adhesive has dried, hang item from a hook, nail, or screw.

Reusable Adhesive-Backed Plastic Hooks

Special adhesive strips let you remove and reuse these hooks without damaging the wall. Hooks are white polystyrene and have a temperature range of 50° to 105°F. Just pull the tab on the adhesive strip to remove the hook from the wall. *Note:* Each time you reuse the hook, a new adhesive strip is required. Hooks come with four adhesive strips, except 1024A23, which comes with two.

Repl. adhesive strip assortment fits all hooks below.

2 5/16″	11/16″	10	1046A5	$8.18

Interlocking Hangers

Zinc-Plated Steel

Aluminum, 1201A24

All of these hangers consist of identical parts that slide together and interlock for a secure hold. To remove your item, simply lift it off—no tools required. Use screws (not included) to mount hangers to wall and item.

Zinc-Plated Steel Hangers— Often used to hang mirrors, cabinets, and wall panels, these hangers are made of zinc-plated steel. Lift-off clearance of 1″ required for installation and removal. O'all height when mounted is 1 1/2″. Four screw holes per hanger.

Aluminum Hangers— A special Z-shape allows two of these hangers to wedge together, securely locking panels in place. Ideal for hanging wall panels, partitions, and signs. Made of unfinished aluminum. Lift-off clearance of 5/8″ required for installation and removal. Overall height when mounted is 3 1/8″. 1201A24 has two screw holes. 1201A38 has nine screw holes and can be cut to any length using a hacksaw.

							Each
Aluminum	1 7/8″	72″	3/16″	#8	—	1201A38	$13.44

Load-Rated Easy-Level Hangers

Hang mirrors, panels, and pictures straight the first time—these hangers have a removable tubular level. Each hanger consists of two aluminum pieces; one piece attaches to your item, and the other piece holds the level and mounts to the wall. When the wall piece is straight, remove the level and hang your item. Mounting holes are on 4″ centers. Furnished with screws.

Magnetic-Mount Hooks

No drilling or fastening required; hooks are magnetic, so they're easy to attach and reposition on steel walls, cabinets, and desks. The magnets on Styles 1-3, 5, 6, and 12 are nonmarring.

Note: "Hold Power" (where listed) is the amount of weight the hook can hold under ideal conditions. Variations in material, surface finish, condition, and thickness will reduce these ratings. Please allow for your individual conditions (such as oiled parts and rusty, painted, and plated surfaces).

Styles 1-3— Have a 0.02″ thick steel base with a beige painted finish and aluminum hook with a polished finish.

Style 4— Have a 0.04″ thick zinc-plated steel base and hook.

Style 5— Has a 0.05″ thick steel base with a beige painted finish, a black nylon hook, and a 9/16″ door bumper.

Style 6— Has a 0.30″ thick chrome-plated steel base and zinc-plated steel hook.

Style 7— Has a 0.43″ thick chrome-plated steel base and an 11/16″ ID zinc-plated steel ring hook.

Style 8— Base is 0.48″ thick. You can reverse the hook to face forward or backward. Base is blue thermoplastic. Hook is zinc-plated steel with a dull finish. A 5/16″-24 screw (included) secures hook to magnet.

Style 9— 14025A44 has a 0.44″ thick chrome-plated steel base and hook. 14025A52 has a 0.50″ thick nickel-plated steel base and hook.

Style 10— Have a steel base and hook with a white painted finish. 14025A46 has a 0.35″ thick base; 14025A47 has a 0.31″ thick base.

Style 11— Has a 0.19″ thick chrome-plated steel base.

Style 12— Has a durable ivory-colored plastic base and hook.

T-Slotted Mounting Track

The T-slotted design allows you to slide in 1/4″-20 hex head bolts (not included; see 93306A series on page 3151 and 92865A549 on page 3140) to mount, position, and hang clamps and fixtures. To reposition clamps and fixtures, loosen the bolt and slide it into a new position. Ideal for positioning jigs, stops, and hold-downs on table saws. Track is made of clear anodized extruded aluminum and has mounting holes that accept #8 pan head screws (not included). Mounting holes are on 3″ centers.

About Wood Screws for Power Drivers

With a sharp cutting point, widely spaced threads, and a variety of drive styles, wood screws for power drivers are good for use in composites and other dense materials.

Power screwdriver bits for Phillips screws are sold on pages 2818-2819. Torx drive power bits are sold on page 2823; square drive power bits are sold on page 2824.

To prevent splitting, we recommend that you drill a starter hole slightly smaller than the screw you're installing (see page 2432 for drill bits).

Note: You can use Phillips and square drive sheet metal screws in place of wood screws for power drivers (see pages 3022-3030).

Screw Size		No. 6	No. 7	No. 8	No. 9	No. 10	No. 12
Decimal Equivalent		0.138″	0.151″	0.164″	0.177″	0.190″	0.216″
Drill Size	Hard Wood	5/64″	3/32″	3/32″	7/64″	7/64″	1/8″
	Soft Wood	1/16″	1/16″	5/64″	5/64″	3/32″	7/64″

Self-Sinking Flat Head

Thanks to a curved neck, these screws sink into soft materials and sit flush when installed. Also called bugle-head deck screws, they are threaded at least 1/2 of their length (unless noted).

Square Drive— Have a Type 17 auger point that easily penetrates hard woods. Choose from Type 316 stainless steel and 18-8 stainless steel; both are a good choice for ACQ-treated (arsenic-free) lumber and may be mildly magnetic. Type 316 stainless steel is more corrosion resistant than 18-8 stainless steel. Minimum Rockwell hardness is B84.

Phillips— Made of hardened C1018 steel with a gray coating that's resistant to at least 1,000 hours of salt spray, compared to zinc plating which provides 200 hours or less. Minimum Rockwell hardness is C44.

Self-Sinking Small Flat Head Square Drive

Ideal for trim and finish work, these screws have a small flat countersinking head and a slender shank. Also known as trim head and deck screws, they're threaded at least 1/2 of their length (unless noted). All except black-phosphate steel screws have a Type 17 auger point that easily penetrates hard woods.

Type 316 Stainless Steel— More corrosion resistant than 18-8 stainless steel and a good choice for ACQ-treated (arsenic-free) lumber. May be mildly magnetic. Min. Rockwell hardness is B89.

18-8 Stainless Steel— More corrosion resistant than coated steel and black-phosphate steel; a good choice for ACQ-treated (arsenic-free) lumber. May be mildly magnetic. Rockwell hardness is B85.

18-8 Stainless Steel with Washer— More corrosion resistant than coated steel and black-phosphate steel and a good choice for ACQ-treated (arsenic-free) lumber. May be mildly magnetic. Each has an 18-8 stainless steel washer backed with neoprene for a weather-resistant seal. Washer OD is 0.625″; height is 0.199″.

Coated Steel— Ribs under the head create a recess for complete countersinking. Screws are made from hardened C1020-C1022 steel and have a gray corrosion-resistant coating. Rockwell hardness is C47. All except 91520A301 have a knurled shoulder that reams a hole to reduce drag on the screw and driver.

Black-Phosphate Steel— Made from hardened C1018-C1022 steel. Mildly rust resistant. Not rated for hardness.

Self-Sinking Flat Head Uni-Drive

Have a curved neck and a drive that requires only one power bit (sold separately) for all screw sizes. They're threaded 2/3 of their length and have a Type 17 auger point that easily penetrates hard woods. Screws are corrosion-resistant 18-8 stainless steel which is a good choice for ACQ-treated lumber. May be mildly magnetic. Min. Rockwell hardness is B100.

2″ Long Steel Uni-Drive Power Bit ..... 93686A920 **Each** $1.97

For information about wood screws for power drivers, see page 3014.

Low-Profile Pan Head for Plastic Composites

Designed with a smaller than usual pan head and threads that change directions to cut into composites without distorting the surface around the hole. The drive is star-shaped (compatible with Torx drivers and bits).

Each is fully threaded and has a Type 17 auger point for easier penetration. All are made from corrosion-resistant 18-8 stainless steel which may be mildly magnetic. Minimum Rockwell hardness is B84.

To Order: For screws with a painted head, please specify color: tan, brown, or gray.

Flat and Pan Head Phillips for Plywood and Particleboard

Sharp, asymmetrically angled threads provide excellent holding power and cut particleboard and other man-made materials without splitting. Screws are threaded at least ⅔ of their length (unless noted). All are made from C1018-C1022 steel with a black-oxide finish and are mildly rust resistant. Minimum Rockwell hardness is C44.

Serrated-Thread Screws for Wood, Plywood, and Fiberglass

Serrated threads penetrate dense materials and provide extra holding power. Screws are fully threaded (unless noted). The stainless steel screws are suitable for use in fiberglass and are a good choice for ACQ-treated (arsenic-free) lumber.

Type 316 Stainless Steel—More corrosion resistant than 18-8 stainless steel; may be mildly magnetic. Minimum Rockwell hardness is B89.

18-8 Stainless Steel—Passivated (coated with a protective film) to guard against oxidation. More corrosion resistant than zinc-plated steel. May be mildly magnetic. Minimum Rockwell hardness is B80.

Zinc-Plated Steel—Made from C1012 steel and zinc-plated for good rust resistance. Excellent for plastics, sheet metal, and masonry. Minimum Rockwell hardness is C40.

About Wood Screws

Use a wood screw when you need more holding power than a nail can provide. Wood screws are threaded at least two-thirds of their length and have a sharp point to facilitate entry.

Phillips and square drive screws can either be power driven or hand driven; screws with slotted drives should only be driven by hand. Screwdriver bits for Phillips screws are sold on pages 2818-2819; bits for square drive screws are sold on page 2824.

To prevent splitting, we recommend that you drill a starter hole slightly smaller than the screw you're installing (see page 2432 for drill bits). Use a countersink to create a recess for flat and oval head screws (see page 2468 for countersinks). The body diameter of your countersink should be equal to or larger than your screw's head diameter, and the included angle of your countersink should match your screw's head angle.

Note: You can use sheet metal screws in place of wood screws (see pages 3022-3030 for sheet metal screws).

Wood Screw Materials

18-8 Stainless Steel— Has excellent corrosion resistance and may be mildly magnetic. Minimum Rockwell hardness is B85.

Brass— Nonmagnetic with good corrosion resistance. Softer than stainless steel. Minimum Rockwell hardness is B55.

Zinc-Plated Steel— Made from low-strength steel such as C1006-C1022. Offers good rust resistance in most environments. Not rated for Rockwell hardness.

Flat Head Phillips, Square Drive, and Slotted

Flat head screws are beveled under the head so they provide a flush surface within countersunk holes. Choose from 18-8 stainless steel, brass, and zinc-plated steel.

Hex Flange Head Lag Screws

Hot-Dipped Galvanized Steel

Also known as lag bolts, these thick screws have a flange under the head for extra holding power. They are also a good choice for ACQ-treated (arsenic-free) lumber.

Hot-Dipped Galvanized Steel—Made from C1006-C1022 steel, these screws offer excellent rust resistance. Screws are threaded at least half of their length. All have a minimum Rockwell hardness of B70 and meet ASTM A153.

Type 316 Stainless Steel—Our most corrosion resistant and longest length hex flange head lag screws. All are made with molybdenum for increased corrosion resistance. May be mildly magnetic. Screws with a 1/4" diameter have a 2 3/8" thread length; those with a 3/8" diameter have a 3" thread length. All have a minimum Rockwell hardness of B89.

Hex Head (Lag Screws)

Also known as lag bolts, these screws come in longer lengths than wood screws and are easy to tighten with a wrench.

Screws are threaded at least 2/3 of their length (unless noted). Length is measured from under head. All have a minimum Rockwell hardness of B70 and meet ASME B18.2.1. Type 316 stainless steel, 18-8 stainless steel, and hot-dipped galvanized steel are a good choice for ACQ-treated (arsenic-free) lumber.

Type 316 Stainless Steel— More corrosion resistant than 18-8 stainless steel. May be mildly magnetic.

18-8 Stainless Steel— More corrosion resistant than zinc-plated steel. May be mildly magnetic.

Hot-Dipped Galvanized Steel— Made from C1006-C1022 steel; offers superior rust resistance compared to zinc-plated steel. Steel conforms to ASTM A307 or SAE J429; zinc coating conforms to ASTM 153.

Zinc-Plated Steel— Made from C1006-C1022 steel; offers good rust resistance.

Black Zinc-Plated Steel— Made from C1006-C1022 steel; offers good rust resistance and a decorative, black finish.

Also known as carriage bolts, these screws have a square neck that keeps them from turning once tightened. Use in square holes for wood-to-wood and wood-to-metal fastening. Length is measured from under head. All meet ANSI B18.5, are fully threaded (unless noted), and have a Class 2A thread fit. Type 316 stainless steel, 18-8 stainless steel, and hot-dipped galvanized steel are a good choice for ACQ-treated (arsenic-free) lumber. For washers, see 97449A on page 3239.

Type 316 Stainless Steel— Our most corrosion resistant round head square neck carriage screws. May be mildly magnetic. Min. Rockwell hardness is B70. Partially threaded screws have at least 3/4″ of thread.

18-8 Stainless Steel— Excellent corrosion resistance that's superior to hot-dipped and zinc-plated steel. May be mildly magnetic. Min. Rockwell hardness is B70. Partially threaded screws have at least 3/4″ of thread.

Grade 2 Hot-Dipped Galvanized Steel— Made from C1006-C1050 steel. Offers superior rust resistance compared to zinc-plated steel. Steel conforms to ASTM A307; zinc coating conforms to ASTM 153. Minimum Rockwell hardness is B80. Partially threaded screws have at least 6″ of thread. Use with 90371A galvanized nuts on page 3187.

Grade 2 Zinc-Plated Steel— Low strength steel with good rust resistance. Conforms to ASTM A307 or SAE J429. Min. Rockwell hardness is B66. Partially threaded screws have 6″ or more of thread.

Grade 5 Zinc-Plated Steel— Medium strength steel with good rust resistance. Grade marked on top of head. Conforms to SAE J429. Minimum Rockwell hardness is C25.

Silicon Bronze— Consists of 95-98% copper with silicon added for strength. Nonmagnetic. Not rated for Rockwell hardness.

Grade 2 Round Head Ribbed-Neck (Carriage Screws)

Also known as ribbed-neck carriage bolts, these screws have ribs that lock them in place when installed in holes that are slightly smaller than the ribbed neck diameter. Screws resist turning while you're tightening or loosening the nut. Can be used for metal-to-metal fastening. Length is measured from under the head. Screws are fully threaded and made of Grade 2 zinc-plated steel, unless noted. All have a min. Rockwell hardness of B69 and meet ASTM A307.

♦ May be partially threaded (at least ¾").

About Tapping Screws

Screw Types

Sheet metal screws have a pointed end and widely spaced threads. They're self-starting in thin sheet metal. In thicker materials, a drilled hole is recommended.

Thread-forming screws have a blunt point and fine threads. They form threads in metal, plastic, and plywood. A drilled hole is required.

Thread-cutting screws have a blunt, tapered, tap-fluted end that cuts machine screw threads and ejects material as it turns. Use in metal, plastic, and plywood. A drilled hole is required.

Self-drilling screws drill their own hole, tap a thread, and fasten material in a single operation. Excellent for use in sheet metal.

Materials

Type 316 Stainless Steel— Superior corrosion resistance. May be mildly magnetic. Minimum Rockwell hardness is B85.

18-8 Stainless Steel— Excellent corrosion resistance. May be mildly magnetic. Minimum Rockwell hardness is B85.

Type 410 Stainless Steel— Stronger than Type 316 and 18-8 stainless steel but less corrosion resistant. Magnetic. Minimum Rockwell hardness is C34.

Aluminum— Made from aluminum 2024-T4 alloy, it offers mild resistance to weather-related corrosion. Nonmagnetic. Not rated for Rockwell hardness.

Steel— Made from steel such as C1016-C1024. Thread forming and thread-cutting screws have a minimum Rockwell hardness of C33; sheet metal screws are not rated.

Finishes

Black Oxide and ***Black Phosphate—*** Offer mild rust resistance and some lubricity.

Chrome Plated— Provides a bright, attractive appearance and good rust resistance.

Nickel Plated— A decorative finish that's more rust resistant than zinc plating and less expensive than chrome plating.

PTFE Coated— A thin, slick coating that prevents sticking and binding. Unaffected by caustic cleaners. Complies with FDA 21 CFR 175.300 for contact with food.

Weather-Resistant Coated— A heat-cured plastic or epoxy coating that resists rust and corrosion better than zinc plating, minimizes reactions between dissimilar metals, and adds lubricity.

Zinc Plated— Offers good rust resistance.

Countersinking

Use a countersink (see pg. 2468) to create a recess for flat and oval head screws. The body diameter of your countersink should be equal to or larger than your screw's head diameter and its included angle should match your screw's head angle.

An Important Note About Hole Size

The hole size required to install a self-tapping screw varies according to the material and thickness you're fastening. Our reference drill sizes are based on industry data and typically allow adequate thread engagement. We suggest, however, that you test to determine the ideal hole size for your application.

Sheet Metal Screws

For technical drawings and 3-D models, go to mcmaster.com.

Pan Head Phillips

Pan head screws have a lower profile and a slightly larger diameter head than round head screws. The underside of the head has a flat bearing surface. Length is measured from under head.

Pan Head Square Drive

Also called a Robertson drive, the square drive offers excellent driving power and resists driver slippage. Pan head screws have a lower profile and a slightly larger head diameter than round head screws. The underside of the head has a flat bearing surface. Length is measured from under head.

For drivers, see 5830A on page 2835; for bits, see 7185A on page 2824.

Pan Washer Head Square Drive

The washer and pan head are formed as one piece, providing a large flat bearing surface that reduces the likelihood of crushing mating surfaces and holds thin materials. Also called Robertson and Scrulox screws, the square drive design resists driver slippage. Made of zinc-plated steel. Length is measured from under the washer.

For drivers, see 5830A on page 2835; for bits, see 7185A on page 2824.

Pan Head Uni-Drive

Bit

The universal drive design on these screws requires only one power bit (sold separately) for all screw sizes. Pan head screws have a lower profile and a slightly larger head diameter than round head screws. The underside of the head has a flat bearing surface. Made from 18-8 stainless steel. Length is measured from under the head.

Pan Head Torx

The Torx drive handles high torque and prevents your driver from slipping. Screws have a low profile and a slightly larger head diameter than round head screws. The underside of the head has a flat bearing surface. Screws are made from zinc-plated steel. Length is measured from under the head.

For drivers see pages 2848-2850; for bits see pages 2823-2824.

Large Diameter (Truss) Head Phillips

Truss head screws have a low profile and a larger head diameter than both pan head and round head screws. The extra diameter provides a bearing surface that's excellent for holding thin materials. Made of 18-8 stainless steel. Length is measured from under the head.

Tamper-Resistant Button, Round, and Pan Head

Tamper-resistant screws require unique drivers for installation (unless noted) and removal. All have a flat bearing surface under the head (unless noted) and are made from 18-8 stainless steel. Length is measured from under the head.

Pin-in-Hex—All have the same button head as our Pin-in-Torx screws, but with a different drive style. For drivers, see 7253A on page 2840; for bits, see 7257A on page 2821.

Pin-in-Torx—These low-profile screws have a button head that is flatter than both pan and round head screws. For drivers, see 83335A on page 2849; for bits, see 7377A on page 2824.

One Way—All have a round head (unless noted). They install with a standard slotted screwdriver, but require a special removal tool. For removal tool, see 7392A on page 2835.

Drilled Spanner—All have a pan head with a low profile and a slightly larger head diameter than round head screws. For drivers, see 94062A on page 2835; for bits, see 52775A on page 2825.

Tri-Wing®—All have a Y-shaped drive and a pan head with a low profile and a slightly larger head diameter than round head screws. For drivers, see 7266A on page 2835; for bits, see 7175A on page 2825.

♦ Has an oval head which is undercut to 70% of normal height to allow more threading. ★ Has a pan head. ▲ Partially threaded.

Tamper-Resistant Flat Head

Virtually impossible to install or remove without special matching drivers, these screws are beveled under the head to provide a flush surface within countersunk holes. Made from 18-8 stainless steel. Length is measured from the top of the head.

Pin-in-Hex—For drivers, see 7253A on page 2840; for bits, see 7257A on page 2821.

Pin-in-Torx—For drivers, see 83335A on page 2849; for bits, see 7377A on page 2824.

Drilled Spanner—For drivers, see 94062A on page 2835; for bits, see 52775A on page 2825.

For information about sheet metal screws, see page 3022.

Flat Head and Undercut Flat Head Phillips

Also known as hinge screws, these flat head screws are beveled under the head to provide a flush surface within countersunk holes. Length is measured from the top of the head.

Screws with an undercut head are indicated with a ♦. The head is undercut to 70% of the normal height to allow more threading.

Special-Finish Flat Head Phillips

Brass Coated

Match these decorative steel hinge screws to your existing hardware. They provide a flush surface within countersunk holes. Length is measured from the top of the head. All meet ANSI B18.6.4.

Nickel-plated screws are entirely plated in nickel while ***brass-coated*** and ***black-coated*** screws are entirely plated in clear-zinc and have a colored polymer coating on the top of the head.

Flat Head Uni-Drive

Bit

The universal drive requires only one power bit (sold separately) for all screw sizes. All screws are beveled under the head to provide a flush surface within countersunk holes. Made from 18-8 stainless steel. Length is measured from the top of the head.

Flat Head Square Drive

Also called a Robertson drive, the square drive offers excellent driving power and resists driver slippage. Screws are beveled under the head to provide a flush surface within countersunk holes. Made from 18-8 stainless steel. Length is measured from the top of the head.

For drivers, see 5830A on page 2835; for bits, see 7185A on page 2824.

Oval Head Phillips

Beveled under the head like flat head screws, but these screws have a domed head that rests above the surface for a more decorative look. Use in countersunk holes. Length is measured from the edge of the head.

Self-Piercing Hex Washer Head

Unslotted

Slotted

Vibration Resistant Slotted

The needle point on these screws easily penetrates up to 0.050″ thick sheet metal. The washer and hex head are formed as one piece, providing a large flat bearing surface that reduces the likelihood of crushing mating surfaces. Length is measured from under the washer.

Vibration-Resistant Zinc-Plated Steel—Also known as Tapits, these screws have an integral washer with a serrated surface that keeps the screw from loosening. The serrations slow the screw at the point of engagement to minimize stripping as well. Ideal for electrical grounding.

Oval Head Phillips with Washer

Also known as Sems trim screws, these screws have a freely rotating washer that's permanently attached and provides firm hold against thin materials. Washer OD is ½″. Together, the head and washer are 0.102″ to 0.123″ thick. Screws accept a #2 Phillips drive. Length is measured from edge of head.

Sealing Hex Head

Also known as Staps screws, these screws have a 0.101″ thick EPDM rubber washer bonded to steel. The washer provides cushioning and vibration damping. Screw length is measured from under the head and does not include the thickness of the washer. Use a ¼″ drill to create the hole for No. 17 screws.

For more information about thread-forming screws, see page 3022.

About Thread-Forming Screws

Thread-forming screws form mating threads in metals and plastics by displacing material rather than cutting it. They form a defined number of threads per inch and require a drilled or punched hole.

Screws for Metals

- ***Round-shank Type-B screws*** (the most common thread-forming screws) grip thin metals such as stainless steel, aluminum, and cast iron. They have coarse threads.
- ***Round-shank quick-drive screws*** grip heavy gauge sheet steel and cast metal. They have fine threads and sharp nibs for fast starts.
- ***Triangular-shank screws for metal*** grip soft metals such as aluminum, brass, and copper. They have fine threads.
- ***Triangular-shank screws for wood-to-metal*** are ideal for tasks such as fastening wood floors to metal crossmembers. They have coarse machine screw threads.

Round Shank Type B

Round Shank Quick Drive

Triangular Shank for Metal

Triangular Shank for Wood-to-Metal

Screws for Plastics

- ***Triangular-shank screws for plastics*** grip a wide variety of plastics including polypropylene and ABS. They have coarse threads.
- ***Round-shank high-performance screws*** fasten thin plastics without causing damage. They have deep, sharply angled threads.
- ***Round-shank screws for brittle plastics*** fasten brittle materials such as phenolic plastic without causing damage. They have alternating high and low threads.
- ***Round shank screws with sharp point*** fasten a variety of plastics, particleboard, and other composite materials. They have a tapered point and sharply angled threads.

Triangular Shank for Plastics

Round Shank High Performance

Round Shank for Brittle Plastics

Round Shank with Sharp Point

Round-Shank Screws for Metals (Type B)

Ideal for use in thin metals and nonferrous castings. All have coarse threads, a round shank, and a blunt tip. Each screw has an incomplete thread near the tip for easy entry.

Pan head screws have a low profile head with a flat bearing surface. Length is measured from under head.

Flat head screws are beveled under the head to provide a flush surface within countersunk holes. Length is measured from the top of the head.

Hex washer head screws have a head and washer that are formed as one piece, which provides a large flat bearing surface that reduces the likelihood of crushing surfaces. Length is measured from under the washer.

♦ Head is undercut to 70% of normal height to allow more threading.

Round-Shank Quick Drive Screws for Metals

Pan Head

Hex Washer Head Slotted

Hex Washer Head Unslotted

With protruding nibs on the leading threads, these screws start fast and are easy to drive. Also called Swageform screws, they have machine screw threads, a round shank, and a blunt tip. Use them in electronic applications, as well as heavy gauge sheet steel and cast metal. All are made from zinc-plated steel.

Pan head screws have a low profile and a flat bearing surface. Length is measured from under the head.

Hex washer head screws have a washer and hex head that are formed as one piece to provide a large flat bearing surface that reduces the likelihood of crushing surfaces. Length is measured from under the washer.

Triangular-Shank Phillips Screws for Plastics

Coarse, sharply angled threads can be used with plastics including polypropylene, polycarbonate, acetal, polystyrene, and ABS to provide maximum holding strength with minimal stress.

Also known as Plastite screws, they have a triangular shank (also called tri-lobular), a blunt tip, and a pan head with a low profile and a flat bearing surface. Length is measured from under head.

Miniature Triangular-Shank Screws for Metals

Ideal for small-scale applications. Also known as Taptite screws, these low-profile screws form fine threads in soft metals such as aluminum, brass, and copper. Each has a pan head with a flat bearing surface, a star-shaped drive (compatible with Torx drivers and bits), a triangular shank (also called tri-lobular), and a blunt tip. All are made from case-hardened zinc-plated steel. Length is measured from under the head.

For drivers see pages 2823-2824; for bits see pages 2848-2850.

Round-Shank High-Performance Screws for Plastics

With a round shank, blunt tip, and deeper, more sharply angled threads than other thread-forming screws, these screws require less driving torque and they won't crack thin materials. Similar to PT and PT Delta screws, they have a star-shaped drive (compatible with Torx drivers and bits) and a low-profile pan head with a flat bearing surface. Use them to fasten into a variety of plastics including polypropylene, polycarbonate, acetal, polystyrene, and ABS. All are made from zinc-plated steel. Length is measured from under the head.

For drivers see pgs. 2823-2824; for bits see pgs. 2848-2850.

Triangular-Shank Torx Screws for Plastics

The Torx drive handles high torque and prevents your driver from slipping. Use these screws in a variety of plastics such as polycarbonate, ABS, and acetal. Also known as Plastite screws, they have a blunt tip and sharply angled, coarse threads that inflict minimal stress when installed. All except 96001A164 are fully threaded.

Pan head screws have a low profile and a flat bearing surface. Length is measured from under the head. ***Flat head*** screws are beveled under the head to sit flush within countersunk holes. Length is measured from the top of the head.

For drivers see pages 2823-2824; for bits see pages 2848-2850.

Round-Shank Screws for Brittle Plastics

Minimize cracking and splitting in brittle materials such as phenolic and glass-filled plastics and wood. All have a Phillips drive, round shank, and blunt tip.

Pan head screws have a higher profile and slightly smaller head diameter than standard pan head screws. Bearing surface is flat. Length is measured from under head. ***Flat head*** screws are beveled under the head to sit flush within countersunk holes. Length is measured from top of the head.

For more information about thread-forming screws, see pages 3022 and 3031.
For more information about thread-cutting screws, see page 3022.

Triangular-Shank Wood-to-Metal Thread-Forming Screws

Also known as Flortorx screws, these screws form coarse machine screw threads that provide strong connections that resist stripping and pullout. Compared to thread-cutting screws, they have 50% more thread engagement and require 40% less torque to install. All have a triangular shank (also called tri-lobular) and a blunt tip.

They have a Torx drive that prevents driver slippage and a flat head that's beveled underneath to provide a flush surface within countersunk holes. All are steel with a rust-resistant black phosphate-and-oil finish. Length is measured from the top of the head. For drivers see pages 2823-2824; for bits see pages 2848-2850.

Round-Shank Sharp-Point Screws for Plastics

The tapered point reduces the chance that you'll crack the material you're fastening. Screws have a Phillips drive, a round shank, and deep, coarse threads that cut cleanly and reduce stripping. Each has a low-profile pan head with a flat bearing surface. They're ideal for use in a wide variety of plastics, PVC vinyl, particleboard, and other composite materials. Made from Type 410 stainless steel. Length is measured from under the head.

About Thread-Cutting Screws

Thread-cutting screws cut machine screw threads and eject the chips as they're turned. They have a round shank, tapered entering threads, and a notched end with a blunt tip. Use them in metal, plastic, and plywood. They require a drilled or punched hole.

We offer Type F (the most common thread-cutting screw), Type 23, and Type 25 thread-cutting screws. Compared to Type F screws, Type 23 and Type 25 screws offer maximum thread cutting and excellent chip clearing so they're better for softer materials.

Thread-Cutting Screws for Metals and Plastics (Type F)

Use these Type F screws to cut machine screw threads in a wide variety of materials including metals such as aluminum, cast iron, and brass, and plastics such as polypropylene, ABS, and phenolic plastic.

Pan head screws rest above the material surface when installed. The head has a low profile and a flat bearing surface. Length is measured from under head.

Flat head screws are beveled under the head so they provide a flush surface within countersunk holes. Screws with an undercut head are indicated with a ♦. The undercut head is 70% of the normal height to allow for more threading. Length is measured from the top of the head.

Hex washer head screws have a head and washer that are formed as one piece, which provides a large flat bearing surface that reduces the likelihood of crushing surfaces. Length is measured from under the washer.

♦ Has an undercut head.

Green Electrical Grounding Screws

A green chromate finish identifies these screws as grounding screws. They have Type F threads and a slotted hex-washer head that's formed as one piece to provide a large flat bearing surface. All are made from zinc-plated steel. Length is measured from under the washer.

Torx Screws for Metals and Plastics (Type F)

These versatile screws have a Torx drive that handles high torque and prevents your driver from slipping. Each has Type F threads, a Torx drive, and a flat head that's beveled underneath to provide a flush surface within countersunk holes. Use them to cut machine screw threads in a wide variety of materials including aluminum, cast iron, brass, brittle phenolic plastic, polypropylene, and ABS.

All are made from steel and have a rust-resistant black-phosphate finish. Length is measured from the top of the head.

For drivers see pages 2823-2824; for bits see pages 2848-2850.

Hinge Screws for Metals and Plastics (Type F)

Commonly used with door hinge hardware, these screws are made of steel and come in four finishes. All have Type F threads, a Phillips drive, and a flat head that's beveled underneath to provide a flush surface within countersunk holes. The head is also undercut to allow for more threading. Length is measured from the top of the head.

Screws for Soft Metals and Plastics (Type 23 and Type 25)

Ideal for soft materials thanks to a single, wide cutting slot that clears chips better than the smaller cutting grooves in Type F screws.

All have a Phillips drive and a low-profile pan head with a flat bearing surface. Made from Type 410 stainless steel. Length is measured from under the head.

Type 23 screws have fine threads. Use them in cast iron, zinc die castings, and plastic.

Type 25 screws have coarse threads that grip better in plastics and other soft materials.

About Self-Drilling Screws

Self-drilling screws drill a hole and tap a thread in a single operation. Install them with a power driver.

Materials

Expand-Flex Alloy Steel— Alloy 4037 steel provides the strength, ductility, and resistance to embrittlement needed for structural and other critical applications. Use these screws to join aluminum to aluminum, aluminum to steel, and steel to steel. Minimum Rockwell hardness is C28.

Aluminum— Made from 7075-T6 high strength heat-treated aluminum alloy and similar in strength to low-strength steel. Ideal for fastening aluminum to aluminum and for use outdoors. Minimum Rockwell hardness is B82.

Ultra Stainless Steel— A unique blend of elements including molybdenum for excellent corrosion resistance and Type 410 stainless steel for superior strength. Magnetic. Minimum Rockwell hardness is C50.

18-8 Stainless Steel— With excellent corrosion resistance, 18-8 stainless steel is a good choice for marine and chemical applications. May be mildly magnetic. Minimum Rockwell hardness is B84. *18-8 stainless steel screws with hardened drill point* have a case-hardened steel drill point welded to the end. The point enables them to drill through materials harder than 18-8 stainless steel and is not rated for Rockwell hardness.

Type 410 Stainless Steel— Harder than 18-8 stainless steel but less corrosion resistant. Magnetic. Minimum Rockwell hardness is C34.

Steel— Made from case-hardened C1016-C1024 steel, these screws have a minimum surface hardness of Rockwell C50 (unless noted). Use to join steel to steel.

Finishes

Protective Gray Finish— Protects against corrosion due to galvanic interaction with aluminum.

Weather-Resistant Coating— A heat-cured coating that provides 720 hours of salt spray resistance (up to 1,000 hours on 18-8 stainless steel) compared to zinc plating, which provides 200 hours or less. It prevents reactions between dissimilar metals (unless noted) and offers good lubricity. Color is metallic gray.

Zinc Plated and Black Finish— Provide good rust resistance.

Note: For effective fastening, the screw's drill point must penetrate the total material thickness before the first thread engages.

Hex size is measured from flat to flat. Height includes washer.

Hex Washer Head for Aluminum

Ideal for fastening aluminum to aluminum and for use outdoors. Each screw has a hex washer head that's formed as one piece, providing a large flat bearing surface that reduces the likelihood of crushing mating surfaces. Unless noted, *expand-flex alloy steel* screws can also be used to join aluminum to steel and steel to steel. All screws are fully threaded. Length is measured from under the washer.

Hex Washer Head

The washer and hex head are formed as one piece. The underside of the head provides a large flat bearing surface that reduces the likelihood of crushing mating surfaces. All screws are fully threaded (unless noted). Length is measured from under the washer. *Note:* Weather-resistant coated screws are not for use with aluminum.

Strip-Resistant Hex Washer Head

Serrations under the head add resistance and minimize stripping by acting as a break. The washer and head are formed as one piece, providing a large flat bearing surface. All screws are fully threaded. Length is measured from under the washer. Thin head, medium head, and high head screws are ideal for electrical grounding.

Thin Head—Use to fasten materials up to 0.100″ thick. Made from zinc-plated steel.

Medium Head—Our most versatile strip-resistant screw; great for general applications. Made from zinc-plated steel. Install with a wrench or a Torx driver (see pages 2848-2850).

High Head—The high head provides extra surface for your socket driver to grasp. Also known as Penetrator Plus screws, they're made from zinc-plated steel.

Wide Head—Also known as garage door Teks screws. Made from weather-resistant coated steel.

Sealing Hex Washer Head

When you drive these screws, a flexible black EPDM rubber disc compresses to form a tight seal. The hex washer head is formed as one piece. Head height includes the thickness of washer(s) and rubber disc. All screws are fully threaded. Length is measured from under the hex washer head.

Steel with 18-8 stainless steel encapsulated head screws have an 18-8 stainless steel cap covering their head to prevent rust.

Style A—Have a freely rotating rubber disc.

Style B—Have a rubber disc that's bonded to a freely rotating metal washer.

♦ Has a 1/2″ long drill point to fasten material up to 0.095″ thick.

Metal-to-Wood Sealing Hex Washer Head

Use these screws to fasten thin metal to wood framing. They have a freely rotating EPDM rubber washer for a water-tight seal. All are fully threaded and have a cutting point that easily penetrates overlapping panels.

Made from weather-resistant coated steel. The coating provides 1,000 hours of salt spray resistance (compared to zinc plating, which provides 200 hours or less). Screw length is measured from under the washer.

Maximum recommended metal thickness is 0.035″. Minimum recommended wood thickness is equal to the screw length.

Pan Head Phillips

All have a rounded top and a flat bearing surface. Great for general applications. Screws are fully threaded. Length is measured from under the head.

18-8 stainless steel screws with hardened drill point provide superior drilling performance compared to Type 410 stainless steel and zinc-plated steel screws in comparable sizes.

Wood-to-Metal Flat Head

Phillips with Cutting Wings

Torx without Cutting Wings

Designed to fasten wood and composite materials to steel. Unless noted, screws have cutting wings near the tip that ream a clearance hole through the top material, then break off when they hit steel so the screw can tap the remainder of the hole.

Screws are beveled under the head to provide a flush surface within countersunk holes. Length is measured from the top of the head.

Weather-resistant coated steel screws are fully threaded, unless noted. They're a good choice for ACQ-treated (arsenic-free) lumber.

Zinc-plated steel screws are fully threaded.

● Does not have cutting wings. ★ Has at least 1⅞″ of thread.
♣ Has at least 1″ of thread. ♦ Approximate drill point length is ½″.

Round Washer Head Phillips

Also known as metal lath screws, you can use these screws to secure metal wire lath to steel framing. The washer and round head are formed as one piece, providing a large flat bearing surface.

All screws are fully threaded and accept a #2 Phillips drive. Made from zinc-plated steel. Length is measured from under the head.

Pan Head Square Drive

Use these screws to fasten fiberglass, composites, and light steel. Also known as a Robertson drive, the square drive offers excellent driving power and resists driver slippage. All screws have a rounded top and a flat bearing surface. Fully threaded. Length is measured from under the head.

For drivers, see page 2835; for bits, see page 2824.

Low-Profile Head Combination Drive

Also known as pancake head screws and panel clip fasteners, these low-profile wide-head screws are good to attach framing to light-gauge metals with a maximum thickness of 3/16″. The combination drive accepts both #2 Phillips and #2 square drivers. Screws are fully threaded and made from zinc-plated steel. Minimum Rockwell hardness is C52. Length is measured from under the head.

Tamper-Resistant Pan and Flat Head

The pin-in-torx drive makes these screws difficult to remove without the proper tools. All are fully threaded.

Pan head screws have a rounded top and a flat bearing surface. Maximum recommended material thickness is 0.076″. Length is measured from under the head.

Flat head screws are beveled under the head, so they provide a flush surface within countersunk holes. Maximum recommended material thickness is 0.100″ for 8-18 screws, 0.110″ for 10-16 screws with a #2 drill point, and 0.175″ for 10-16 screws with a #3 drill point. Length is measured from the top of the head.

For L-keys and drivers, see page 2849; for bits, see page 2824.

Oval Head Phillips

Beveled under the head like flat head screws, oval head screws have a rounded top that rests above the surface for a more decorative look. Use in countersunk holes. Screws are fully threaded. Made from zinc-plated steel. Length is measured from the edge of the head.

Oval Head Phillips with Washer

Attach fabric and other nonmetallic material to metal with these screws. The freely rotating washer provides a large bearing surface that won't crush thin materials. The head is rounded on top for a finished appearance.

Washer OD is 0.493″. Head diameter is 0.332″; head height is 0.152″. Screws are fully threaded. Length is measured from the edge of the head.

♦ Head is undercut to 65% of normal height to allow more threading. Made from expand-flex alloy steel; for use in aluminum only.

Extra-Long Pan Head Phillips

Use these hardened roofing screws to fasten rigid insulation board and insulating membrane to steel decking and framing. The max. recommended steel thickness is 0.047″ for gray-coated screws and 0.048″ for black epoxy-coated screws.

All screws are partially threaded (unless noted) and FM approved. Length is measured from under the head.

Screw plates (sold separately) provide a larger bearing surface, reducing the likelihood of crushing mating surfaces. The polypropylene screw plate is FM approved.

Self-Sinking Flat Head Phillips

These bugle head screws have a curved neck that sinks into drywall and resists tearing the paper surface. Screws up to 2¼″ long are fully threaded; longer lengths are partially threaded. All have a sharp, piercing point (unless noted) and are made from C1018 (or better) steel with a black-phosphate finish (unless noted). Mildly rust resistant. Minimum Rockwell hardness is C44. Length is measured from the top of the head.

Drywall-to-Metal—Ideal for attaching drywall to metal studs up to 0.036″ thick.

Drywall-to-Wood—Use to attach drywall to wood framing. Have a zinc yellow-chromate plating for good rust resistance.

Laminating—Use these screws to hold two sheets of drywall together until the glue sets. Screws will pierce metal studs up to 0.036″ thick.

Corrosion-Resistant—Treated with a dacrotized finish to provide 500 hours of salt spray resistance. Color is silver. Will pierce metal studs up to 0.036″ thick.

Self Drilling—With a #2 drill point, you can easily drive these screws through drywall and into metal studs up to 0.105″ thick.

High Hold—Alternating high and low threads exceed the holding power of standard drywall screws and reduce the torque required for installation. Use them to attach drywall to wood framing and metal studs up to 0.036″ thick.

Strip-Resistant Flat Head Phillips

Also known as wafer head screws, these screws have ribs beneath the head to prevent stripping. With a curved neck, they sink into the surface material and sit flush when installed. You can use them to join cement board and other dense sheathing, wire lath, and plywood to metal and wood studs. Screws are fully threaded, except 2¼″ lengths which are partially threaded. They're made from C1022 steel and have a weather-resistant metallic-gray coating that resists up to 500 hours of salt spray. They're also a good choice for ACQ-treated (arsenic-free) lumber. Minimum Rockwell hardness is C45. Length is measured from the top of the head.

Sharp Point—Fasten metal studs up to 0.036″ thick.

Self Drilling—Fasten metal studs up to 0.105″ thick.

Self-Sinking Small Flat Head

These trim head screws have head diameters that are one-third smaller than other countersinking drywall screws. Screws have at least 1″ of thread. Made from C1018 (or better) steel with a black-phosphate finish. Mildly rust resistant. Minimum Rockwell hardness is C50. Length is measured from the top of the head.

For square drivers, see page 2835; for square bits, see page 2824.

Sharp Point—Fasten wood or metal trim to wood or metal framing up to 0.036″ thick.

Self Drilling—Fasten drywall to metal studs up to 0.105″ thick. Approximate drill point length is 9⁄64″.

Auto-Feed Screw Driving Attachment

Drive wood screws fast. Just use an adapter (required) to attach the auto-feed attachment to your powered screwdriver. (Attachment, adapter, and screws sold separately.) The attachment comes in a 14″ Lg.×10½″ Wd.×3½″ Ht. plastic box and includes one #2 square drive bit.

Adapter for DeWalt screw guns fits models 252, 255, 257, 260, 266, 272, 274, 275, 276, and 284. Adapter for Makita screw guns fits models 6801DVB, 6802VB, 6820V, 6823N, 6823TP, 6824, and 6825. Adapter for Milwaukee screw guns fits models 6701-20, 6702-20, 6707-20, 6708-20, 6740-20, 6741-1, 6742-20, 6743-20, 6743-50, 6743-55, 6745-1, 6746-1, 6755-4, 6758-1, 6760-1, 6790-1, and 6791-20.

Pan head screws are fully threaded; flat head screws are partially threaded. All screws are made from corrosion-resistant zinc yellow-chromate plated C1018 steel and have a minimum Rockwell hardness of C52.

About Machine Screw Materials and Dimensions

Materials

Type 316 Stainless Steel— Our most corrosion resistant stainless steel. Withstands chemicals, solvents, and pitting caused by chlorides. May be mildly magnetic.

18-8 Stainless Steel— Has excellent corrosion resistance. May be mildly magnetic.

Titanium— Resists corrosion from salt water and stands up to chemicals and acids better than stainless steel. It's strong, yet 40% lighter than steel.

Brass— Nonmagnetic with very good corrosion resistance. Usually softer than steel and stainless steel.

Aluminum— Offers mild resistance to corrosion. It's nonmagnetic, a good electrical conductor, and one-third the weight of steel.

Steel— This low-strength general purpose steel is often plated with zinc for good rust resistance in most environments.

Plastic— Plastic screws come in economical *nylon*, impact resistant *polycarbonate*, non-stick *PTFE*, and water and steam resistant *PEEK*.

Ceramic— Won't melt, rust, seize, or become brittle at high temperatures. Highly resistant to corrosive gasses. Nonconductive.

Finishes

Black Oxide— Provides a decorative finish, adds mild rust resistance, and makes screws easier to thread.

Zinc Plated— Enhances rust resistance.

Chrome Plated— Bright and attractive. Offers good rust resistance.

Cadmium Plated— Adds top-of-the-line corrosion protection and makes screws easier to thread.

Black Coated— Delivers corrosion resistance, and deep, consistent color that won't rub off with repeated use.

PTFE Coated— This slick coating prevents fasteners from sticking and binding.

Thread Fit

Thread fit is a measure of how tightly threads fit together. Most of our screws have a standard thread fit: inch sizes are Class 2A (unless noted); metric sizes are Class 6g, except zinc plated, which are Class 6h.

Countersinking

Use a countersink (see pages 2452-2454) to create a recess for flat and oval head screws. The body diameter of your countersink should be equal to or larger than your screw's head diameter and its included angle should match your screw's head angle.

Pan Head Torx

With more drive surface than Phillips and slotted screws, you can apply extra force without slipping. For drivers, see pages 2848-2850; for bits, see pages 2823-2824.

Screws are fully threaded. Length is measured from under the head. **Black-coated steel** screws have a Class 3A thread fit.

Military Specification Pan Head Phillips

Strict military standards ensure performance and reliability. Materials and dimensions meet Fed. Spec. FF-S-92. Screws are fully threaded. Length is measured from under the head.

300 series stainless steel screws are passivated to meet QQ-P-35. **Cadmium-plated steel** screws meet QQ-P-416 and have a Class 3A thread fit.

Pan Head Phillips with Split Lock Washer

When compressed, the split washer bites into surfaces, holding tension constant and keeping screws tight. Also known as Sems screws, the washer rotates freely, but won't fall off.

Screws are fully threaded. Length is measured from under the head.

Pan Head Phillips with Spring-Tension Lock Washer

Ensure a tight fit without scratching surfaces. Also known as Square Cone Sems screws, each has a curved washer that flexes to keep tension constant. The washer rotates freely, but won't fall off. Screws are fully threaded. Length is measured from under the head.

18-8 stainless steel screws have a magnetic Type 410 stainless steel washer.

Pan Head Phillips with Lock Washer

Sharp teeth dig into surfaces to resist vibration and keep screws tight. Also called Sems screws, each has a washer that rotates freely, but won't fall off. Screws are fully threaded. Length is measured from under the head.

18-8 stainless steel screws have magnetic Type 410 stainless steel washers. **Screws with internal-tooth lock washer** won't snag along the outer edge and have a smoother appearance than screws with external-tooth washers. **Screws with external-tooth lock washer** offer maximum holding power.

Self-Locking Pan Head Phillips

A nylon anti-vibration patch is bonded to the threads so screws resist loosening. The patch has a temperature range of –70° to 250°F. Screws are made from 18-8 stainless steel and are fully threaded. Length is measured from under the head.

For information about machine screws, see page 3042.

Sealing Pan Head Phillips

Prevent leaks and protect equipment. O-rings stop liquid and gas pressure up to 6,000 psi when used in the hole size range listed. Screws are made from 18-8 stainless steel and are fully threaded. Screw length is measured from under the head.

Buna-N rubber O-rings withstand abrasive environments and exposure to water. Temperature range is –40° to 225°F.

Silicone rubber O-rings are good for the widest range of temperatures: –80° to 400°F.

Fluoroelastomer rubber O-rings are resistant to acids and oils. Temperature range is –20° to 400°F.

Sealing and Self-Locking Pan Head Phillips

A vibration-resistant patch locks threads in place so screws won't come loose and cause seals to leak. Screws are made from 18-8 stainless steel. They have a silicone O-ring that stops liquid and gas pressure up to 6,000 psi when used in the hole size range listed. They also have a nylon locking patch with a temperature range of –40° to 225°F. Screw length is measured from under the head.

Metric Japanese Industrial Standard Pan Head Phillips

Screws meet JIS B1111 for a smaller head diameter and shorter head height than most other metric pan head screws. They're made from zinc-plated steel and are fully threaded. Length is measured from under the head. For JIS drivers, see 53325A on page 2817. **Also Available:** 18-8 stainless steel screws in sizes marked with a ★. Please ask for 94102A650 and specify thread size and screw length.

Metric Pan Head Phillips with Lock Washer

Sharp teeth dig into surfaces to resist vibration and keep screws tight. Also called Sems screws, each has a washer that rotates freely, but won't fall off. All are 18-8 stainless steel and have magnetic Type 410 stainless steel washers. Screws are fully threaded. Length is measured from under the head.

With Internal-Tooth Lock Washer

With External-Tooth Lock Washer

Screws with internal-tooth lock washer won't snag along the outer edge and have a smoother appearance than screws with external-tooth washers. **Screws with external-tooth lock washer** offer maximum holding power.

■ Washer is 18-8 stainless steel.
▲ Has a #2 drive and washer OD of 6.5 mm.

Metric Self-Locking Pan Head Phillips

A nylon anti-vibration patch fused to the threads prevents loosening. The patch has a temperature range of –70° to 250° F.

Screws are 18-8 stainless steel and fully threaded. Length is measured from under the head.

Metric Sealing Pan Head Phillips

Seal out contaminants and prevent leaks. Made from 18-8 stainless steel, screws have a silicone rubber O-ring that stops liquid and gas pressure up to 6,000 psi when used in the hole size range listed. Temperature range is –80° to 400° F. Screws are fully threaded. Length is measured from under the head.

Pan Head Phillips Machine Screw Assortments

Keep the screws you need convenient and organized. Assortments come in a steel box.

Inch assortment includes 1,200 size 4-40, 6-32, 8-32, and 10-32 18-8 stainless steel screws in lengths from ¼″ to 1″.

Metric assortment includes 1,500 size M3, M4, M5, and M6 zinc-plated steel screws in lengths from 6 to 20 mm.

Inch Assortment	93175A212	$106.10
Metric Assortment	92020A116	95.50

Large Diameter (Truss) Head

Phillips

Slotted

Truss head screws have a rounded, low-profile head that's wider than both round and pan head screws. The extra diameter provides a bearing surface that's excellent for holding thin materials. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. All have a Class 2A thread fit. Length is measured from under the head.

Tamper-Resistant Large Diameter (Truss) Head Drilled Spanner

Virtually impossible to remove without a special matching driver (for drivers, see page 2835; for bits, see page 2825). Screws have a rounded, low-profile head that's an excellent bearing surface for holding thin materials.

Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. All are made from 18-8 stainless steel and have a Class 2A thread fit. Length is measured from under the head.

Extra-Wide Low-Profile Slotted

Also called hurricane shutter screws, these 18-8 stainless steel screws have a wide head so there's no need for a washer. Head dia. is 0.755″; head ht. is 0.110″. Fully threaded; Class 2A thread fit. Length is measured from under the head.

Lg.	Pkg. Qty.		Per Pkg.

1″	5	90015A471	$9.52

Round Head Slotted

Each screw has a thick, round head and a flat bearing surface. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. All have a Class 2A thread fit. Length is measured from under the head.

Also Available: Sizes marked with a ♣ are also available as a screw with nut. Please ask for 90232A600 and specify thread size and screw length.

♣ **Also Available:** Screw with nut. Please ask for 90232A600 and specify thread size and screw length.

Round Head Combination Drive

You can drive these zinc-plated steel screws with a Phillips or slotted screwdriver. Each has a thick, round head and a flat bearing surface. All screws are fully threaded and have a Class 2A thread fit. Length is measured from under the head.

Binding Head Slotted

Binding head screws have a large, flat bearing surface so they're ideal for creating solid electrical connections. They have a thick, rounded head with slightly tapered sides. All are fully threaded (unless noted) and have a Class 2A thread fit. Length is measured from under the head.

Fillister Head

Fillister head screws maximize driving power by combining the greatest head height with the smallest head diameter you can get in a machine screw. They have a slightly rounded top, a flat bearing surface, and a Class 2A thread fit. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from under the head.

Also Available: Military specification stainless steel drilled-fillister-head screws in sizes marked with a ●. They have a minimum tensile strength of 80,000 psi and are not rated for hardness. Please ask for 90350A100 and specify screw size and length.

Metric Cheese Head Slotted

Cheese head screws maximize driving power by combining the greatest head height with the smallest head diameter you can get in a metric machine screw. Think of them as the metric version of fillister head screws, but with slightly tapered sides and a flat head.

All have a flat bearing surface and are fully threaded. Screws meet DIN 84. ***Stainless steel*** screws have a Class 6g thread fit; ***zinc-plated steel*** screws have a Class 6h thread fit. Length is measured from under the head.

Type 316 Stainless Steel

Hex Washer Head Slotted

These 18-8 stainless steel screws have an indented hex head. The head and washer are formed as one piece; the washer provides a large, flat bearing surface that covers oversized holes. Screws are fully threaded and have a Class 2A thread fit. Head height includes washer. Screw length is measured from under the washer.

Hex Head

All have a flat bearing surface and a Class 2A thread fit. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from under head. For more hex head screws, see pages 3134-3159.

Stainless steel screws have a smooth, flush head.

Zinc-plated steel screws have an indented head.

Zinc-plated steel screws with external-tooth lock washer are also known as Sems screws. They have an indented head and come with a freely rotating, but permanently attached washer for extra holding power.

100° Flat Head Phillips

With a larger bearing surface to distribute holding force, these screws are preferred over standard 82° flat heads for use in soft materials. They provide a flush surface within countersunk holes, are fully threaded, and have a Class 2A thread fit. All screws are made from zinc-plated steel. Length is measured from the top of the head.

Metric Japanese Industrial Standard Flat Head Phillips

JIS B1111 (Japanese Industrial Standard) flat head screws have a head with a larger diameter and a deeper bevel than screws that meet DIN specifications. They provide a flush surface within countersunk holes and are made from zinc-plated steel. All are fully threaded with a Class 6h thread fit. Length is measured from under the head. For JIS drivers, see 53325A on page 2831.

Also Available: 18-8 stainless steel screws (unless noted). Please ask for 97613A550 and specify thread size and screw length.

♣ Not available in 18-8 stainless steel.

Flat Head Phillips

Flat Head — Undercut Flat Head

Considered standard flat head screws, these screws are beveled 82° under the head to provide a flush surface within countersunk holes. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Screws marked with a ● have an undercut head to allow more threading. All have a Class 2A thread fit. Length is measured from the top of the head.
